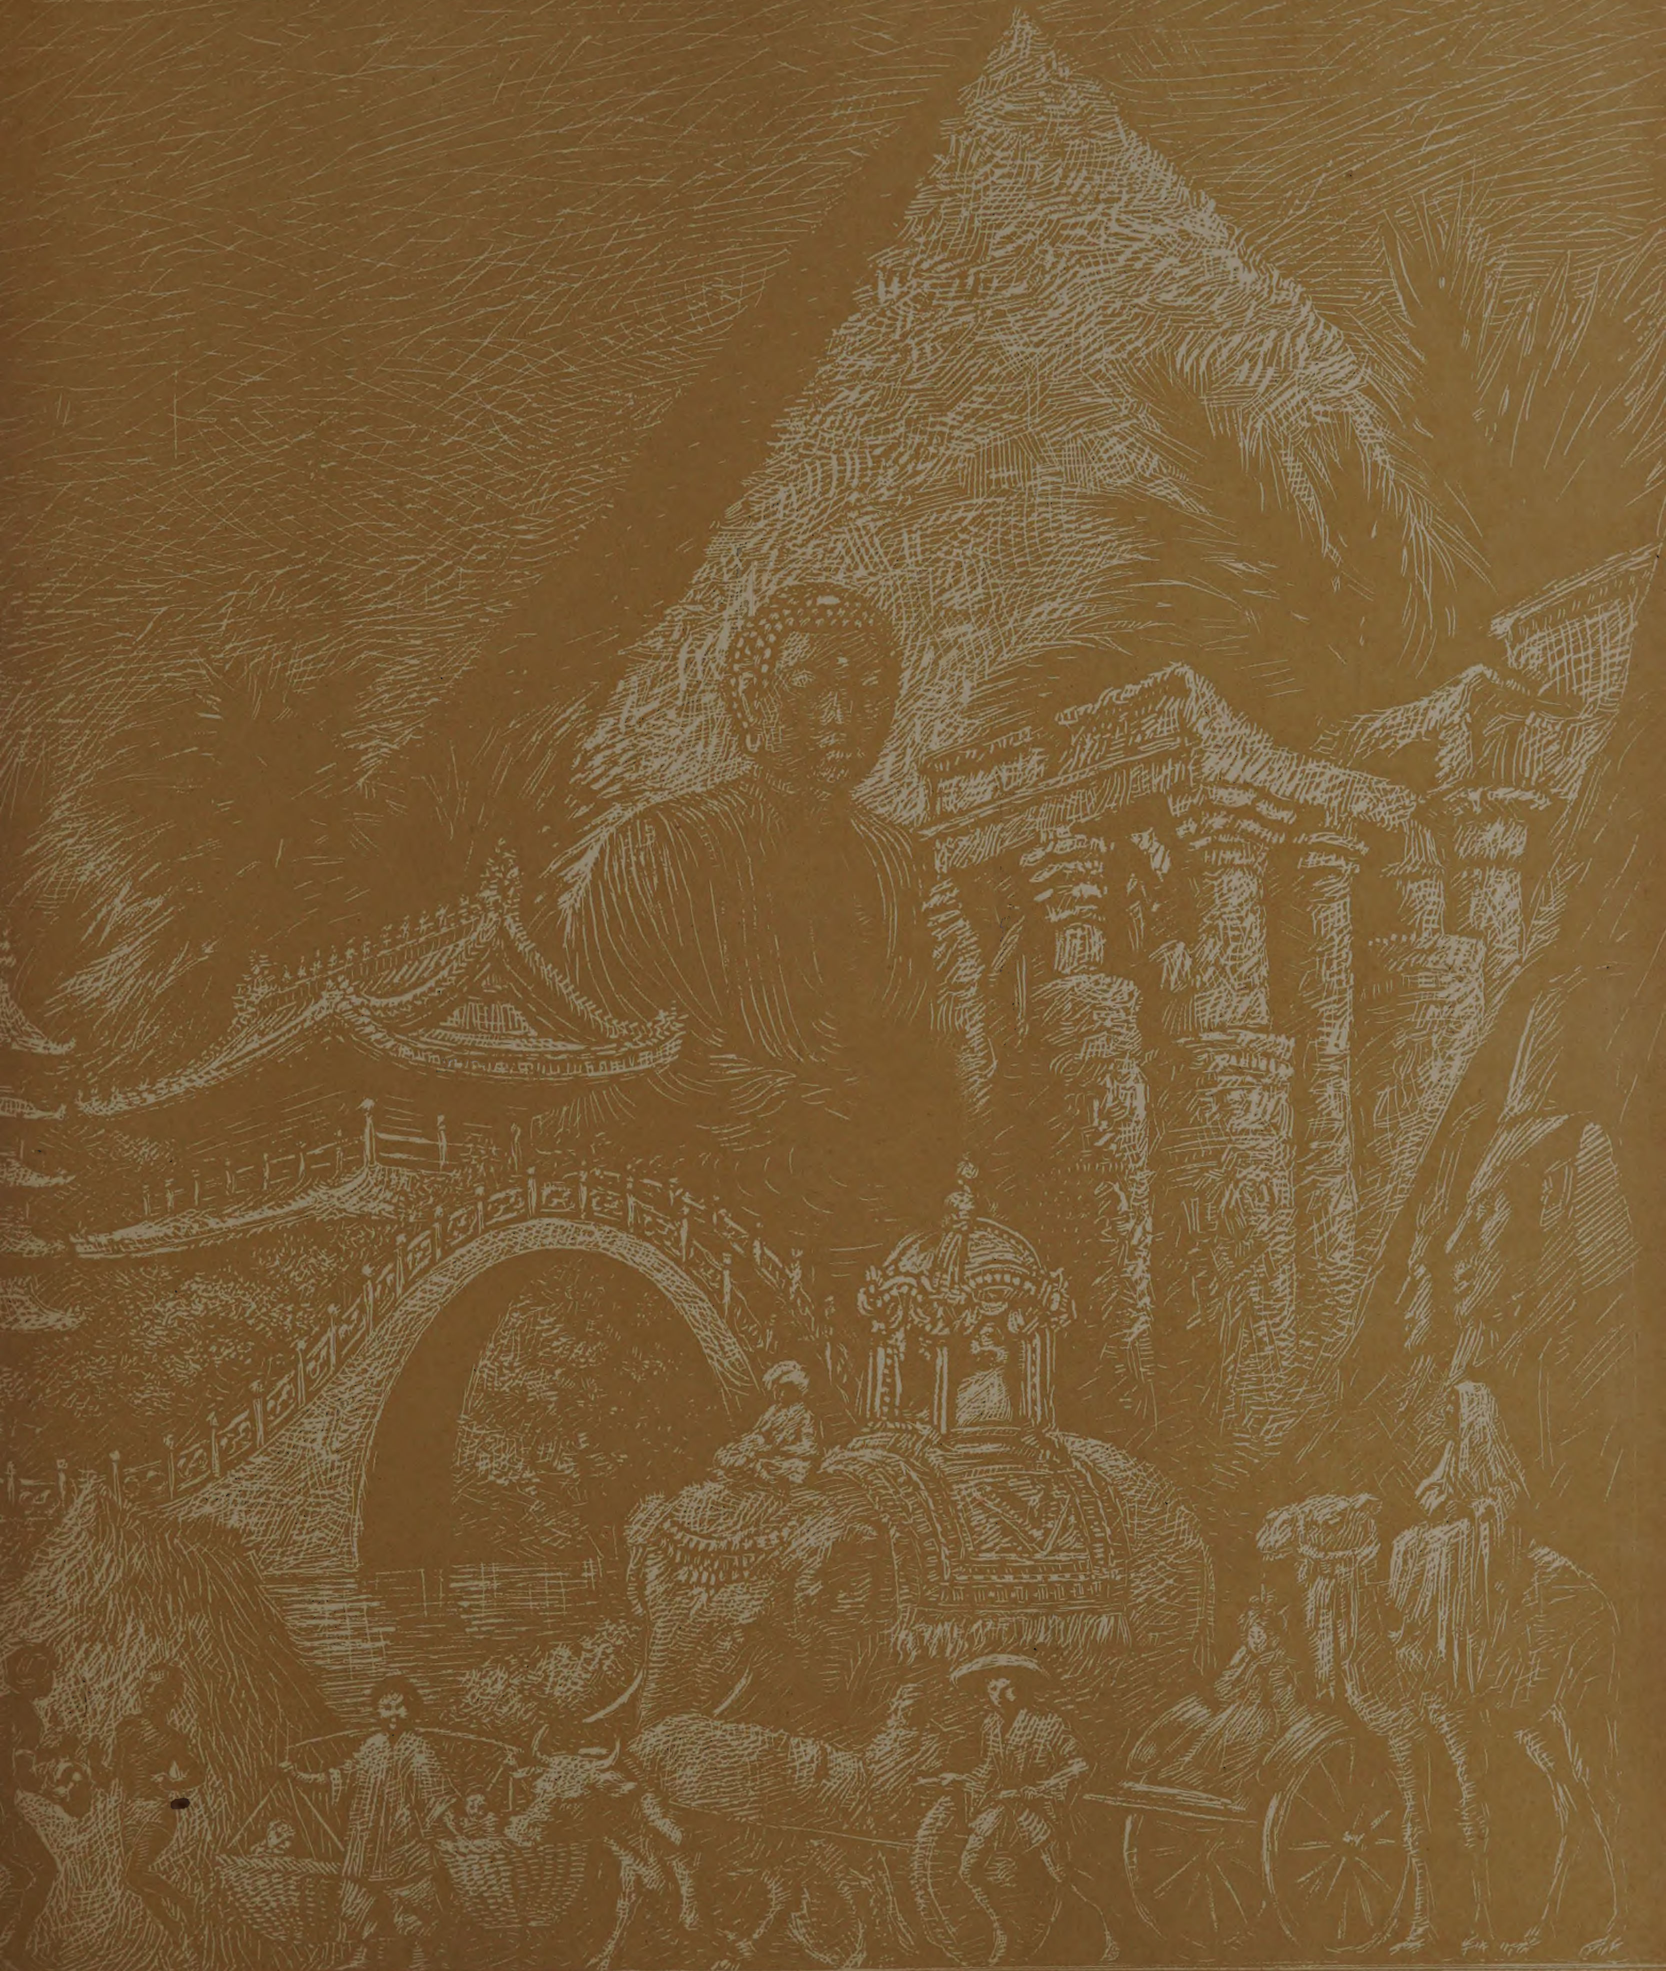
WORLD ATLAS

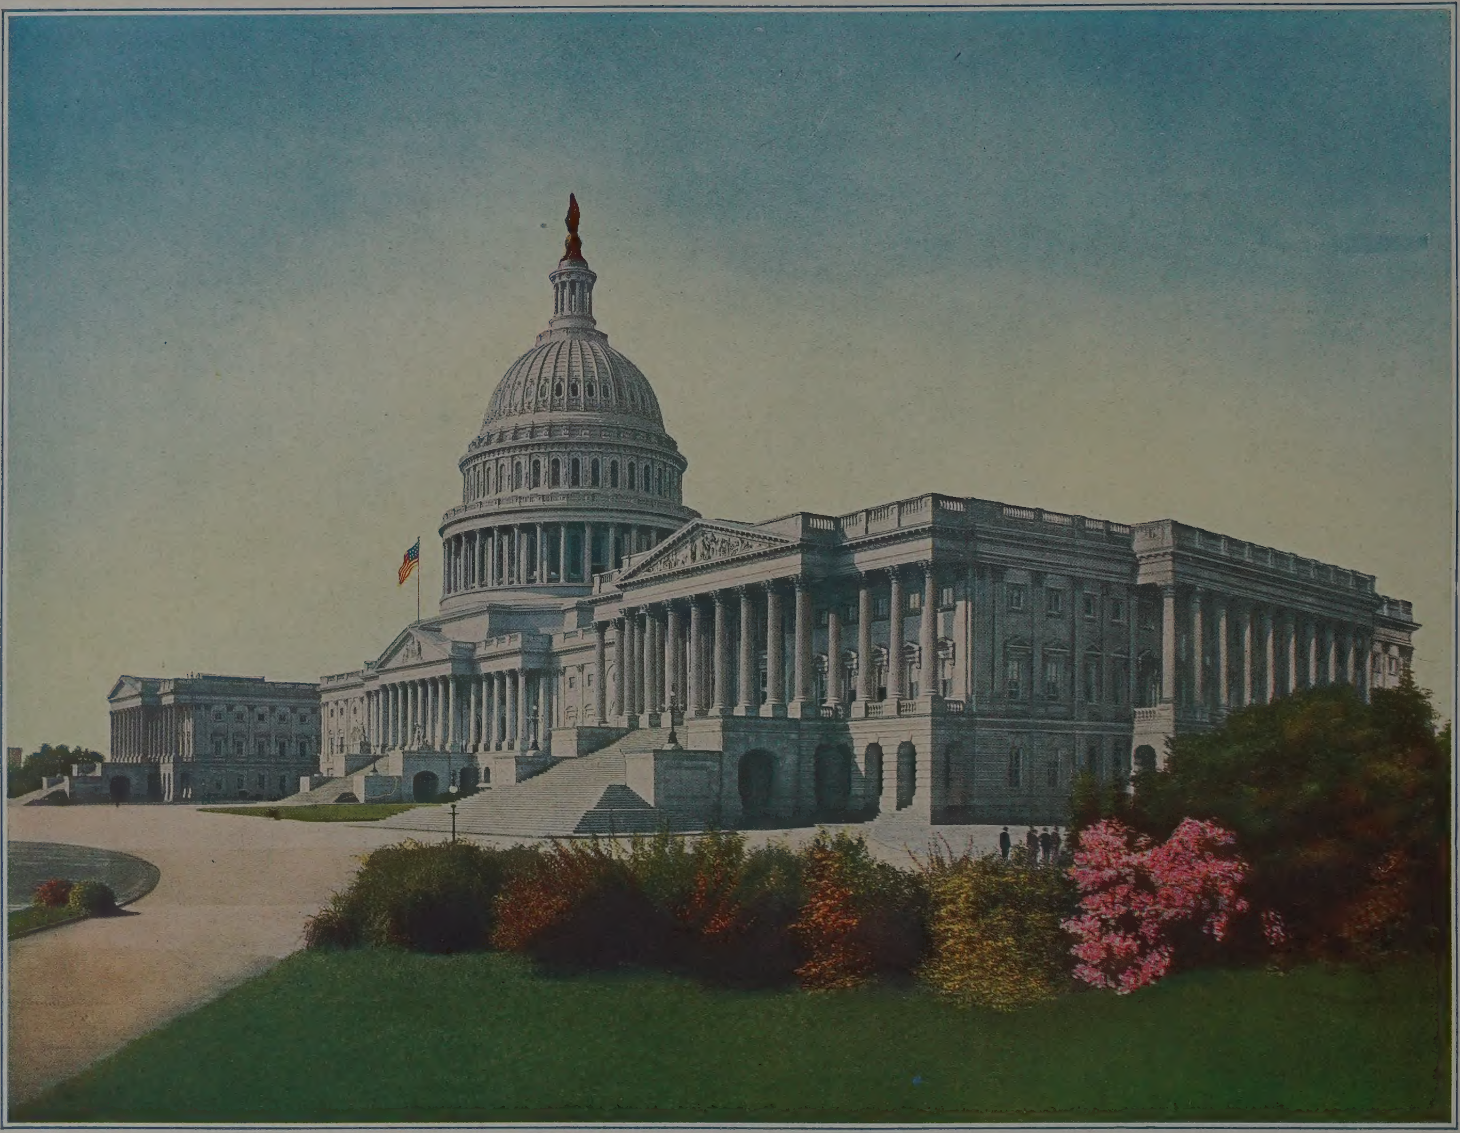
INTERNATIONAL EDITION

Wm Mark Young

OCCIDENT



ORIENT



THE CAPITOL, WASHINGTON, D. C.

Corner Stone laid by Washington, September 18, 1793.—Corner Stone of Extensions laid by Fillmore, July 4, 1851.

751 ft. 4 in. long—350 ft. greatest width—Dome 287 ft. 5 in. high. Statue on dome 19 ft. 6 in. Building and grounds cost $26,000,000.

Daniel Webster, in his oration at the laying of the corner stone, July 4, 1851, ably and eloquently expressed the true sentiment deep in the hearts of every loyal and patriotic American citizen, when he said: "With hearts devoutly thankful to Almighty God for the preservation of the liberty and happiness of the country, all here unite in sincere and fervent prayers that this deposit, and the walls and arches, the domes and towers, the columns and entablatures now to be erected over it, may endure forever. God save the United States of America."

THE SOLAR SYSTEM

The solar system is composed of the Sun, the eight planets with their moons, and a number of comets and asteroids. The planets rotate on their axes, and at the same time revolve around the Sun in a counter-clockwise direction, in elliptical paths, or orbits, at varying distances from the Sun. They are held in their orbits by the centrifugal and centripetal forces resulting from their revolution around the Sun. The point nearest the Sun in the orbit of a planet is its Perihelion; the farthest, its Aphelion. The orbits of Uranus and Neptune are too large to be shown in their true proportions on this diagram.

EARTH

THEORY OF THE SEASONS
(Northern Hemisphere)

The Zodiac is that portion of the heavens eight degrees on either side of the ecliptic, or apparent path of the Sun, and includes the orbits of all the planets. It is divided into twelve equal parts or signs, each named for a constellation of stars.

The Earth advances thirty degrees every month in one of these signs. This causes the Sun to do apparently the same thing in the opposite sign. Thus, when the Earth appears to be in Scorpio the Sun appears to be in Taurus, the opposite sign.

The axis of the Earth always points in the same direction. This, together with the curvature of the Earth, causes the surface to be heated unevenly in different latitudes at the same time. As the Earth revolves about the Sun, the heat received in each latitude varies, causing the seasons.

The Earth revolves around the Sun at about 19 miles a second, and makes one complete revolution in 365 days, 5 hours, 45 minutes, 45.51 seconds. This constitutes a solar year. A calendar year is 365 days. One day is added every fourth year to make up for the odd hours in the solar year.

THE SOLAR SYSTEM AND THE EARTH

FURTHER than the Sun and the Earth and its sister planets, any contemplation of the universe carries us beyond the puny mile as a measure of distance and we adopt the light-year, or the distance that light travels in a year, as our yard-stick. Light travels 186,000 miles a second, over seven times around the Earth, so that a light-year is equal to about six trillion miles. The size of our universe has been variously estimated at from 10,000 to 300,000 light-years in diameter. It is not certain, of course, that there are any limits to the universe, but because up to a certain point the heavens reveal many stars, and beyond that none, we are fairly justified in concluding that *our* universe, at any rate, has definite limits. The night sky brings to our view what are seemingly myriads of stars. Aside from the Milky Way, there are, in both hemispheres, not more than six thousand stars that are visible without the aid of a glass. This means that we never see more than half that number at one time. Telescope and camera help us to find and record a far greater number, so that over a hundred million points of light have been caught on photographic plates.

The Milky Way is that great luminous cloud-like belt which completely circles the sky, in the Southern as well as the Northern Hemisphere. No entirely acceptable explanation of it has ever been offered. A telescope shows it to be made up of millions of stars located in nearly the same plane, so that they are projected against our sky as if they were close together. By far the greater number of stars is in the Milky Way, and latest theories shape it somewhat like a watch, broad and flat, with the Solar System about half way between its center and outer edge.

The Solar System

All the points of light in the night sky we indiscriminately call stars, although they are of several classes. The great majority of them are self-luminous bodies like our Sun and appear as single specks of light. Nebulae, bright cloud-like bodies with perhaps a few stars in their midst, are huge masses of incandescent gases. Only two of them are ever visible to the unaided eye. Star clusters are small groups of stars comparatively close together. Stars, nebulae, and star clusters are all relatively stationary in the sky, but the methodical observer will notice a number of stars that move across the sky with speed much greater than that of the slow procession of the rest. These are the planets, and together with the Sun, the Earth, and a few comets, form the Solar System.

The figure in the accompanying diagram gives some idea of the Solar System. At its center is the Sun, itself a star composed of luminous gases in a rather compressed state. It has a diameter of 864,080 miles and a total volume that is 1,299,617 times that of the Earth. At varying distances from the Sun as a center the eight planets circle round in paths or orbits that are nearly circular, and all of which lie in very nearly the same plane as that of the orbit of the Earth. The planets are not self-luminous, but receive their heat and light from the Sun. The entire Solar System, Sun, planets, satellites, comets and meteors, moves forward as a unit among the stars in the general direction of the star Vega, of the constellation Lyra in our northern sky, at the rate of twelve miles a second.

The table below gives a few of the known facts about the planets. Mercury, the smallest of them, has a very eccentric orbit, varying its distance from the sun by 15,000,000 miles in the course of one revolution of 88 days. Both Mercury and Venus have orbits inside that of the Earth, and consequently always appear close to the Sun as morning or evening stars. Venus is a particularly bright star due to its atmosphere, which increases the reflecting power of a planet. Such atmosphere is lacking about Mercury. Both of these stars present phases like those of the Moon. It is not definitely known whether either of them rotates on its axis, or presents the same side of its surface to the Sun at all times. The latter is thought to be the case with Mercury. Neither planet has any satellites.

PLANET	Mean distance from the Sun (in miles)	Mean Diameter (in miles)	Length of days (in hours and minutes)	Length of year (in 24-hour days)	Number of Satellites
Mercury..	35,946,000	3,106	?	88	0
Venus....	67,170,000	7,705	?	225	0
The Earth	92,900,000	7,918	23h. 56m	365	1
Mars....	141,498,000	4,207	24h. 37m	687	2
Jupiter...	483,177,000	86,718	9h. 55m	4,329	9
Saturn...	885,825,000	71,520	10h. 14m	10,759	9
Uranus...	1,782,151,000	31,690	10h. 45m	30,664	4
Neptune..	2,792,499,000	31,069	?	60,232	1

The Earth, next in order of distance from the Sun, is treated more fully below. Mars, next farthest away, is smaller than the Earth. It is the easiest planet to observe and resembles the Earth in having days and years very similar to ours in length, marked seasons, and an atmosphere. These factors have made it the best subject for those who would speculate as to the inhabitancy of the planets. It presents a surface marked by broad, straight lines which have more or less misleadingly been called "canals." They run at angles from polar caps which accumulate and recede periodically, and meet in large dark patches near a central zone. The explanation that these polar caps are snow and the dark bands canals built to carry the melted snow to an arid central zone has been exploded by the proof that water vapor is absent from the planet. Mars has two small satellites which revolve about it as our Moon about the Earth.

Beyond Mars is a group of planetoids, more than 600 of which are known. They are very small, averaging perhaps twenty-five miles in diameter, and their combined masses amount to but a small fraction of that of the Earth.

Jupiter, the largest of the planets, has a very low density, and is very probably partly or entirely gaseous, if not hot and self-luminous. Though its diameter is more than ten times that of the Earth, Jupiter rotates completely on its axis in a little less than ten hours, so that its equator must spin at a rate of about 30,000 miles an hour. The planet has nine satellites, four between 2,000 and 3,600 miles in diameter and five smaller.

Saturn is interesting because of the series of three rings encircling it, as shown in the diagram. The planet itself is the least dense of any of the planets, so light, in fact, that it would float in water. The three rings which surround it are believed to be composed of millions of small satellites, so close together and so numerous as to give the appearance of a solid mass. Saturn has nine other satellites, all revolving outside the rings.

Uranus and Neptune are both too distant for much to be known about them. Both are surrounded by a gaseous atmosphere. Uranus has four satellites and Neptune one. The satellites of both planets revolve from east to west instead of from west to east as do the satellites of other planets.

Comets are wandering bodies that generally appear to us in luminous form with long streaming "tails" of light always pointing away from the Sun. They have elongated orbits which swing around the Sun as a focus. The comets may be very large, a million or more miles in diameter, and are largely gaseous, having very small masses. Some of them appear periodically in the Solar System; others have been observed once and may or may not return.

Meteors, or "shooting stars," are small pieces of matter, most of them thrown off by passing comets, which enter our atmosphere and travel through it with such tremendous velocity that the friction between the particles and air cause the former to heat to a white heat. Most meteors are thus consumed or oxodized before they reach the Earth. A few of them strike the surface, however, and are found to be composed of chemical elements known on the Earth.

The Earth

Our Earth, like the other planets, is very nearly a perfect sphere. It is 7,918 miles in diameter and 24,902 miles around at the equator. Were the Solar System to be constructed in miniature with the Sun a ball two feet in diameter, the Earth could correctly be represented by a pea 215 feet away, while the most distant planet, Neptune, would be a one-inch ball one and one-eighth miles from the model Sun, with the nearest star 11,000 miles beyond.

The Earth is constantly in motion, describing a number of paths through space, but only two of these of have any direct effect on us, its inhabitants. These are the rotation, or spinning motion, and revolution, or circling motion about the Sun. The Earth turns on its axis once in twenty-four hours, always keeping one-half of its surface toward and the other half away from the Sun. Thus, between the Arctic and Antarctic Circles every part of the Earth has a period of light and a period of dark every twenty-three hours and fifty-six minutes, or alternate day and night. While spinning, the Earth travels in an onward direction around the Sun, completing its almost circular orbit in 365¼ days. As may be seen in the diagram, the axis of the Earth is slanted away from perpendicular to the plane of the orbit by 23½ degrees, and the direction of the slant is constant throughout the year. It is this slant, or inclination of the axis that, with the revolution around the Sun, causes the seasons and the inequality in length of day and night.

The Seasons

The more nearly vertically the rays of the Sun strike the surface of the Earth, the more warmth they bring, because vertical rays pass through less heat-absorbing atmosphere and fall on smaller areas of Earth than do slanting rays. As may be seen from the diagram, the vertical rays of the Sun fall on the equator on two days of the year, September 23 and March 21. At these times, day and night are of equal length all over the Earth, and for this reason they are called the equinoxes. (Equinox is from the Latin, meaning "equal night.") From the Spring Equinox, March 21, the Earth moves on around the Sun until, on June 21, the vertical rays fall 23½ degrees north of the equator and the Sun appears at its highest point in the northern sky. Because it seems to stop for a day in its climb of the heavens before going south again, this date is called the Summer Solstice. (Solstice is from the Latin, meaning "Sun stands still.") At this time the days are their longest in the Northern Hemisphere, much longer than the nights, and that Hemisphere receives its greatest amount of heat. By September 23 the revolution of the Earth has brought the Sun's vertical rays back to the equator, and on December 22 they are 23½ degrees south of it. On the latter date, the days in the Southern Hemisphere are longest, and the Southern Hemisphere receives its most heat, while in the Northern Hemisphere the days are their shortest, and the Sun's rays bring less heat than any other time of the year. Because, then, the days are longer and the Sun's rays most nearly vertical in Summer in the Northern Hemisphere, the summer months are warmest, while the same causes bring warmer weather to the Southern Hemisphere during our winter months.

The hottest and coldest days are not, as we might at first suppose, on the solstices, when the Northern Hemisphere receives the most and the least heat from the Sun. Because of the slowness of the Earth to heat up after the cold winter, and to lose heat after the summer, the Earth in the Northern Hemisphere has not become thoroughly warmed by June 21, and it is not until late July and August that the days become warmest. Similarly the coldest days in winter fall a full month after the Winter Solstice, because the Earth loses its acquired heat so slowly.

The diagram shows the Arctic Circle, which is 23½ degrees from the North Pole, entirely lighted up by the Sun on June 21, and entirely dark on December 22, while in the Antarctic Circle exactly opposite conditions prevail. At the equinoxes the Sun's rays just reach both the North and South Poles. The poles, then, have six months of daylight and six months of darkness, while the light periods in the Arctic and Antarctic Circles vary from 24 hours to six months according to the distance they are from the poles. But because of the extreme angle at which the rays of the Sun strike these far latitudes, the temperature remains comparatively low at all seasons.

The Zodiac

The path of the Sun as it apparently goes around the Earth each year is called the ecliptic, and corresponds to the orbit of the the Earth. Ancient astronomers arbitrarily marked out a belt in the sky, eight degrees either side of the ecliptic which would include the orbits of the Moon and all of the planets, and called it the zodiac, or "circle of animals." The zodiac was divided into twelve parts, or signs, one for each month, and each sign named for a constellation which appeared in it. Thus the Sun enters the sign of Aries, the Ram, on March 21; Taurus, the Bull, April 20; Gemini, the Twins, May 20; Cancer, the Crab, June 21; Leo, the Lion, July 23; Virgo, the Virgin, August 23; Libra, the Balance, September 23; Scorpio, the Scorpion, October 23; Sagittarius, the Archer, November 23; Capricornus, the Goat, December 22; Aquarius, the Water Bearer, January 20; Pisces, the Fishes, February 19.

When the Sun enters one sign, the Earth enters the opposite sign, so that when the Sun is in Aries the Earth is in Libra, and so on all the way around the zodiac. At the time that the signs of the zodiac were named, each constellation was in the sign named for it. But now, more than 2,000 years later, the constellations have gradually slipped back, so that the constellation Taurus is now in the sign of Aries, and Aries in Pisces, and so on. This is caused by the precession of the equinoxes, or turning of the Earth's axis. While for most practical purposes we say that the axis always points in the same direction, in reality the poles swing around once every 25,800 years. This is due to the gravitational attraction of the Sun and the Moon on the equatorial protuberance of the Earth. Thus, in 2,000 years it has swung 1/12 of the way around, which brings us on the Earth in such a position that the zodiacal constellations appear to have slipped back 1/12 of the way in the zodiac. In the course of another 23,800 years they will have slipped back all the way around and appear in their original places.

Refraction

A ray of light, in passing at an angle from a medium of one density to one of another density, is bent in the direction of the denser medium. This is most clearly illustrated by observing a stick stuck in water so that part of it shows above the surface. The stick, itself perfectly straight, will appear to be bent where it enters the water. This illusion is due to the refraction of the light rays as they pass from the air to the denser water. When the light from heavenly bodies passes from the ether to our denser atmosphere the same refraction takes place, and makes these bodies appear to be higher up in the sky than they really are. The amount a ray is bent by the atmosphere depends upon the angle at which it enters, and varies from zero at the zenith to 33 minutes of a degree, as indicated in the diagram.

The Moon

The Moon is the Earth's only satellite. It is 2,163 miles in diameter and revolves around the Earth in a little over 29 days at an average distance of 239,000 miles. It rotates on its axis once every revolution, so that the same face is turned constantly toward the Earth. Though the Moon revolves about the Earth in the same direction that the Earth rotates, it moves more slowly, so that we see the Moon rise in the east and set in the west just as we do the Sun. The Moon is an opaque body like the Earth and has no light or heat other than that received from the Sun. Except during an eclipse, the Sun's rays fall on the Moon at all times. It is only the lighted half of it that we see. The diagram shows that one may see from the Earth the full lighted side of the Moon when it is at full moon, but at first and last quarter only half of the lighted side is visible. When the Moon is in the position indicated by "new moon," the dark side is turned toward the Earth, and is practically invisible. The crescents of both new and old moons that we see are caused by the angles at which we view the lighted half of the Moon, and not from any shadow cast on it by the Earth.

Eclipses

An eclipse of the Moon, or lunar eclipse, occurs when the Earth passes directly across the path of light from the Sun to the Moon, cutting it off and casting a shadow on the Moon. An eclipse of the Sun, or solar eclipse, occurs when the Moon, coming between the Sun and the Earth, casts a shadow on the Earth. An eclipse may be total or partial, according to how directly in the line of light the obstructing body passes. Total eclipses of the Sun can be seen by observers on a narrow strip of Earth only, and can only occur when we have a new moon. Lunar eclipses occur only at full moon.

Tides

The Moon exerts an attractive force on the Earth as a whole and also on every individual particle of the Earth. The force exerted on the Earth as a whole centers at the center of the Earth, while that for each particle centers in the particle itself. Particles on the surface of the Earth nearest the Moon are more strongly attracted than are those within the Earth or on the opposite side. This difference of attractive force has no effect on the rigid land mass, but the fluid oceans respond to it in what we know as tides. The particles of water on the side of the Earth nearest the Moon have a tendency to well up directly beneath the Moon. This they do to a slight extent, and at these places the water rises and the tide is in. A similar action takes place on the opposite side of the Earth, where the attractive force of the Moon for the particles of water is less because of the added distance of the thickness of the Earth. This lessened attraction releases the waters and they tend to well up just as those beneath the Moon, as shown in the diagram. This causes two tides a day instead of one. At new moon and full moon the attractive forces of the Moon and Sun work in apposition and the tides, called Spring Tides, are higher than at the quarter, or Neap Tides, when Moon and Sun exert forces at right angles to each other.

COMPARATIVE TIME BETWEEN

TABLE OF COMPARATIVE TIME

This table is for determining the comparative clock time in different parts of the world.

Example:—When it is 3 p.m. Monday in New York, what time is it in Melbourne, Australia?

Refer to alphabetical index to the right of the table and find the column numbers for New York (13) and Melbourne (5). Follow the vertical column No. 13 down to Monday, 3 p.m. Then follow the horizontal line across to column No. 5 and find 6 a.m., Tuesday, the corresponding time in Melbourne.

Substitutions may be made for the proper days of the week.

The International Date Line

The "International Date Line" is based on the 180th meridian with necessary modifications for certain island groups. This line of date change is accepted by all nations of the world.

When it is Monday east of the "International Date Line", it is Tuesday to the westward. On crossing this line, westbound, go forward one day on the calendar; eastbound, go back one day. For instance if a vessel westbound from San Francisco to Yokohama takes ten days for the voyage, the calendar will show eleven days. The return trip eastbound, taking the same time, will show only nine calendar days.

CHANGES IN WORLD MAPS

As a Result of the World War

TERRITORIAL readjustment on a great scale has resulted from the World War of 1914–18. Some old political divisions have disappeared; others have been reduced in size; new countries have been created; vast continental areas have changed hands; and the islands of the seas have been re-grouped. While in some cases territorial boundaries and final political status are still in process of settlement or awaiting the outcome of plebiscites, the ultimate results of readjustment due to the war will conform closely to details indicated in the following summary.

In the "Great War for Civilization," as it is often called, the powers were lined up as follows: On one side were the "Central Empires" of Germany and Austria-Hungary, which were joined by Turkey and Bulgaria. On the other side were the "Allies," comprising Russia, France, Belgium, Great Britain (assisted by Canada, Newfoundland, Australia, India, New Zealand, South Africa, and the rest of the Empire), Serbia, Montenegro, Japan, Italy, Romania, Portugal, Greece, United States (entered April 6, 1917), Cuba, Panama, Liberia, Hejaz, China, San Marino, Siam, Brazil, Ecuador, Guatemala, Costa Rica, Nicaragua, Honduras, and Haiti.

As a direct result of the War, the League of Nations was created, with headquarters at Genéve, Switzerland. Territorial additions were made to France, Belgium, the British Empire, Japan, Italy, Serbia, Romania, and Greece, at the expense of the Central Empires and their allies; and indirectly additions were also made to the United States by purchase of the Virgin Islands (Danish West Indies), to Norway (by allotment of Svalbard), and to Denmark (by reacquisition of North Schleswig by popular vote), although Norway and Denmark had maintained neutrality throughout the war period.

In the creation of new states and rectification of frontiers, the fundamental principle governing the work of the Peace Conference was the recognition of nationality, the granting of political power, so far as practicable, in accordance with popular aspirations, together with constitutional guarantees of the rights of racial minorities in the individual states.

LEAGUE OF NATIONS

The following 54 States are members of the League:—

Albania*	Dec. 16, 1920
Argentina†	July 18, 1919
Australia	Jan. 10, 1920
Austria	Dec. 16, 1920
Belgium	Jan. 10, 1920
Bolivia	Jan. 10, 1920
Bulgaria	Dec. 16, 1920
Canada	Jan. 10, 1920
Chile	Nov. 4, 1919
China	July 16, 1920
Colombia	Feb. 16, 1920
Cuba	March 8, 1920
Czechoslovakia	Jan. 10, 1920
Denmark	March 8, 1920
Dominican Republic	Sept. 29, 1924
Estonia*	Sept. 22, 1921
Ethiopia	Sept. 28, 1923
Finland*	Dec. 16, 1920
France	Jan. 10, 1920
Germany	Sept. 8, 1926
Great Britain and Nor. Ireland	Jan. 10, 1920
Greece	March 30, 1920
Guatemala	Jan. 10, 1920
Haiti	June 30, 1920
Honduras	Nov. 3, 1920
Hungary	Sept. 18, 1922
India	Jan. 10, 1920
Irish Free State	Sept. 10, 1923
Italy	Jan. 10, 1920
Japan	Jan. 10, 1920
Latvia*	Sept. 22, 1921
Liberia	June 30, 1920
Lithuania*	Sept. 22, 1921
Luxembourg	Dec. 16, 1920
Netherlands	March 9, 1920
New Zealand	Jan. 10, 1920
Nicaragua	Nov. 3, 1920
Norway	March 5, 1920
Panama	Jan. 9, 1920
Paraguay	Dec. 26, 1919
Persia	Nov. 21, 1919
Peru	Jan. 10, 1920
Poland	Jan. 10, 1920
Portugal	April 8, 1920

South Africa	Jan. 10, 1920
Spain	Jan. 10, 1920
Sweden	March 9, 1920
Switzerland	March 8, 1920
Uruguay	Jan. 10, 1920
Venezuela	March 3, 1920
Yugoslavia	Feb. 10, 1920

*Signed the treaties concerning protection of national minorities as a condition of their membership.

† The Argentina delegation did not attend the second Assembly and withdrew from the first Assembly upon the League's decision to refer the amendment to Article 1 of the Covenant proposed by Argentina, for study by a committee that was to report to the second Assembly. Argentina has not given notice of an intention to leave the League, and regards itself as in a state of suspended or passive membership, to continue until some measure regarded as a satisfactory equivalent to the amendment proposed by it has been adopted by the League.

The following States are not yet members of the League:—United States, U. S. S. R., Turkey, Egypt, Ecuador and Mexico.

The Permanent Court of International Justice. The "World Court" is an international court, created late in 1920 by the League of Nations, composed of eleven judges and four deputy-judges elected from among the world's greatest authorities on international law by the Assembly and Council of the League of Nations. The duties of the Court are to decide cases which parties may lay before it, particularly those dealing in international law, treaties, and international obligations.

NEW STATES AND GOVERNMENTS

Albania. Republic, formerly a monarchy. Independence proclaimed in 1917. First president elected 1925. Area, 17,374 sq. m.; pop., 831,877. Capital, Tirana (14,408).

Asir. Emirate in Arabia on the Red Sea, formerly Turkish. Controlled by Nejd. Area, 13,857 sq. m.; pop., 750,000.

Austria. Republic, proclaimed November 1918. Comprises former imperial provinces of Lower and Upper Austria, Vienna, Salzburg, Styria, Carinthia, Tyrol, Vorarlberg, and Burgenland. Area, 32,360 sq. m.; pop., 6,535,363; Capital, Wien (Vienna), pop., 1,865,780.

Czechoslovakia. Republic, proclaimed 1918. Formed of parts of Austria-Hungary, comprising Bohemia, Moravia, Slovakia, autonomous Ruthenia, part of Austrian Silesia (including part of Teschen), and small areas of frontier territory. Area, 54,192 sq. m.; pop., 14,356,000. Capital Praha (Prague), pop., 725,196.

Danzig. Free City under protection of the League of Nations, comprising area in former West Prussia of 754 sq. m.; pop., 383,995. Treaty of 1921 provides for joint economic administration.

Egypt. Kingdom, proclaimed 1922. Formerly British Protectorate. Area 383,000 sq. m.; pop., 14,168,756. Capital, Cairo, pop., 1,059,824.

Estonia. Republic, independent 1918. Comprises former Russian province of Estonia and parts of Livonia and Pskoff, on the Baltic Sea. Area, 18,354 sq. m.; pop., 1,117,270. Capital, Tallinn (Revel), pop., 129,139.

Finland. Republic, constituted 1919. Comprises former Russian Grand Duchy of same name, and Petchenga strip which gives Finland access to the Arctic Ocean. Area, 149,954 sq. m.; pop., 3,558,059. Capital, Helsinki (Helsingfors), pop., 215,829.

Germany. Republic, dating from abdication of the Kaiser, November, 1918. Comprises a federation of 18 republics, all of whose former reigning Kings, Princes, Dukes, etc., abdicated or were deposed. Area, 181,662 sq. m.; pop., 62,568,753. Capital, Berlin, pop., 4,013,588.

Greece. Republic, declared 1924. Area 54,092 sq. m.; pop. 6,435,000. Capital Athēnai (Athens), pop., 600,000.

Hejaz. Kingdom, under control of Nejd, formerly Turkish territory. Area, 150,000 sq. m.; pop., 850,000. Capital, Mecca, pop., 70,000.

Hungary. Kingdom, proclaimed 1920. Comprises about one-third of former Kingdom. Area, 35,875 sq. m.; pop., 8,457,852. Capital, Budapest, pop., 928,996.

Iceland. Sovereign State with permanent neutrality; independence granted by Denmark, 1918. Area, 39,709 sq. m.; pop., 101,764. Capital, Reykjavik, pop., 23,224.

Iraq (Mesopotamia). Independent Kingdom placed under mandate of Great Britain by League of Nations. Formerly Turkish territory in valleys of Tigris and Euphrates Rivers. Area, 143,250 sq. m.; pop., 2,849,282.

Irish Free State. Was made a British Dominion on same basis as Canada, Australia, etc., in 1922. Area, 26,592 sq. m.; pop. 2,972,802. Capital, Dublin, pop., 438,000.

Kuweit. Sultanate since its release from Turkey in 1918, located on northwestern coast of Persian Gulf. Sultan is subsidized by Great Britain. Area, indefinite; pop., 50,000.

Latvia. Republic, independent 1918. Comprises parts of former Russian provinces of Courland, Livonia, and Vitebsk, on the Baltic Sea. Area, 25,395 sq. m.; pop., 1,870,520. Capital, Riga, pop., 350,000.

Liechtenstein. Principality, independent, 1918. Formerly Austrian territory on Swiss frontier. Area, 65 sq. m.; pop., 10,716. Capital, Vaduz, pop., 1,405.

Lithuania. Republic, independent 1918. Comprises parts of former Russian provinces of Vilna, Courland, Grodno, and Suvalki, on the Baltic Sea. Awarded Memel strip by the League of Nations in 1923. Area, 21,683 sq. m.; pop., 2,254,668. Capital, Kaunas (Kovno), pop., 94,904.

Nejd. Sultanate in Central Arabia composed of former Turkish territory. Controls Asir, El Hasa, and Hejaz. Boundaries indefinite. Population about 3,000,000. Capital, Riyadh, pop., 20,000.

Palestine. Independent State placed under mandate of Great Britain by the League of Nations. Comprises former Turkish territory western part of old Palestine. Area, 9,000 sq. m.; pop., 852,268. Capital, Jerusalem, pop., 62,678.

Poland. Republic, proclaimed 1918. Composed of former German, Russian, and Austrian territory, partly allotted by the League of Nations and partly secured by plebiscite. Area, 149,915 sq. m.; pop., 29,589,000. Capital, Warszawa (Warsaw), pop., 1,028,982.

Syria. Composed of five partially autonomous territories, placed under French administration by the League of Nations. Located at eastern end of Mediterranean Sea. Area, 57,460 sq. m.; pop., 2,422,724. Capital, Beyrouth (Beirut), pop., 120,240.

Transjordan. Former Turkish territory included under Great Britain's Palestine Mandate, but for separate administration. Boundaries indefinite. Pop., about 240,000. Capital, Amman, pop., 5,000.

Turkey. Republic formed 1923. Includes small area around Istambul (Constantinople), in Europe, and the Anatolian peninsula in Asia. Area 294,415 sq. m.; pop., 13,660,275. Capital, Angora, pop., 74,784.

Union of Socialistic Soviet Republics. Since the abdication of the Czar in 1917, the greater part of the former Russian Empire has become part of the U. S. S. R. It is composed of six states, each with its own Soviet Government, each of which is made up of a number of autonomous socialistic republics. The six states or principal divisions are Russia, Ukraine, White Russia, Transcaucasia, Turkoman, and Uzbek. Area, 8,186,144 sq. m.; pop., 144,815,000. Capital Moskva (Moscow) pop., 2,025,947.

Yemen. Independent Imamate in southwestern Arabia, formerly under control of Turkey. Area, 75,000 sq. m.; pop., 2,500,000. Capital, Sana, pop., 20,000.

Yugoslavia. (Serb-Croat-Slovene Kingdom) Independent Kingdom formed in 1918. Comprises former Kingdom of Serbia; former Austrian provinces of Croatia (except Fiume), Slovenia, Bosnia, and Herzegovina, part of Dalmatia and certain islands in the Adriatic; several small areas of former Bulgarian territory; and former Kingdom of Montenegro. Area, 96,134 sq. m.; pop., 12,017,323. Capital Beograd (Belgrade), pop., 250,000.

TERRITORY REDISTRIBUTED

Austro-Hungarian Empire. Dismembered and re-distributed. Austria proper becomes a republic. Hungary remains a kingdom, reduced in area. Remaining territory is divided as follows: (1) Czechoslovakia obtains Bohemia, Moravia, Austrian Silesia (except greater part of the city of Teschen and small surrounding area given to Poland), Slovakia, autonomous Ruthenia, and some other small frontier districts. (2) Italy obtains lands around head of Adriatic, including "Italia Irredenta" (the Trentino region, Gorizia and the Istria peninsula, with port of Trieste); also Zara and hinterland in Dalmatia, and the Adriatic islands of Cherso, Lussin, Lagosta, and Pelagosa; also districts of Volosco and Abbazzio on Gulf of Fiume, insuring territorial contiguity with the Free State of Fiume, which, by agreement between Yugoslavia and Italy (1924), was divided between them, the city itself going to Italy. (3) Yugoslavia obtains Croatia, Slovenia, Bosnia, Herzegovina, part of Dalmatia, and most of the Adriatic islands. (4) Romania obtains Bukovina and Transylvania (including Crisana, Maramuresh, and Banat). (5) Poland obtains Austrian Poland and Eastern Galicia (latter under probational administration for 25 years, under League of Nations;) also greater part of the city of Teschen and neighboring territory (formerly a part of Silesia). (6) Liechtenstein becomes independent.

Bulgaria. Western Thrace ceded to Greece, depriving her of Aegean littoral, but retaining guarantee of free commercial outlet at port of Dedeagatch. Strumnitza district and small strips on western frontier given to Yugoslavia.

German Empire. European continental areas dismembered and partly redistributed; entire colonial empire repartitioned. Germany proper becomes a republic.

In Europe, remaining territory is divided as follows: (1) France regains possession of Alsace-Lorraine; France also obtains the exclusive coal rights in the Saar Basin on the Alsatian frontier, to be administered for 15 years under a commission of the League of Nations, the ultimate sovereignty over the region then to be decided by plebiscite. (2) Belgium obtains Eupen, Malmédy, Prussian Moresnet, and La Calamine (Neutral Moresnet) (3) Denmark obtains northern part of Schleswig by plebiscite vote. (4) Poland obtains Prussian Poland, part of Upper Silesia, and the greater part of West Prussia. (5) Czechoslovakia obtains part of Upper Silesia. (6) Danzig, with surrounding territory, is made a Free City. (7) Memel strip, part of East Prussia, awarded to Lithuania.

In Asia, German sphere of influence in Chinese province of Shantung, including Kiao-Chau, ceded to Japan. Restored to China by Japan in 1922.

In Africa, territory has been redistributed as follows: Former German East Africa is subdivided, part renamed Tanganyika Territory, mandate to Great Britain, part (Ruanda-Urundi), mandate to Belgium, subsequently enlarged from Tanganyika by Anglo-Belgian agreement, and part (Kionga Triangle) returned directly to Portugal. German Southwest Africa becomes a mandate to the Union of South Africa. Togoland and the Cameroons are divided between Great Britain and France as mandates, part of the Cameroons being returned directly to France.

In Oceania, Germany's colonies have been given to the following powers as mandatory from the League of Nations: (1) Japan obtains the islands north of the equator, comprising the Caroline, Marianas (Ladrone) (except Guam, U. S. A.), Marshall, and Pelew groups. (2) Australia obtains the Bismarck Archipelago, German Solomon Islands, and the Territory of New Guinea. (3) New Zealand obtains German Samoa, now Territory of Western Samoa, comprising all islands in Samoan group west of 171 degrees W. Long. (4) Nauru, or Pleasant Island, goes to the British Empire as mandatory.

Russian Empire. Dismembered and partly redistributed. The territory which is not included in the U. S. S. R. has been divided as follows: (1) Poland obtains Russian Poland and parts of Vilna and Grodno. (2) Lithuania consists of Kovno and parts of Vilna, Grodno, Courland, and Sulvalki. (3) Romania obtains Bessarabia. (4) The province of Estonia and parts of provinces of Livonia and Pskoff make up the new republic of Estonia. (5) Latvia consists of parts of provinces of Livonia, Courland, and Vitebsk. (6) Finland, with an added strip giving access to Varanger fjord on the Arctic Ocean, becomes independent.

Turkey. Dismembered and redistributed. Turkey retains only a small area around Istambul (Constantinople), Thrace east of the Maritsa River, Anatolia, and a few islands, including Imbros and Tenedos. The remaining territory is divided as follows: (1) Greece obtains the Aegean islands occupied by Greece, except Tenedos and Imbros, and also excepting Castellorizo, which had been occupied by Italy. (2) Italy obtains 14 of the Dodecanese Islands, including Rhodes, off southwest coast of Asia Minor. (3) Cyprus has been formally annexed to Great Britain. (4) Suzerainty over Egypt lost, which becomes independent. (5) Iraq (Mesopotamia) becomes a mandate. (6) Syria becomes a mandate. (7) Palestine becomes a mandate. (8) Transjordan becomes a mandate. (9) Control over Arabia lost, and its various divisions form independent states. Oman had been independent for some time.

OTHER CHANGES IN TERRITORIAL BOUNDARIES AND SOVEREIGNTY

Montenegro and Serbia are now included in Yugoslavia. Svalbard (Spitsbergen), a group of Arctic islands formerly without political affiliation, has been allotted to Norway by the Peace Conference. The boundary of Albania has been changed slightly in favor of Yugoslavia and Italy. The Danish West Indies, comprising chiefly St. Thomas, St. Croix, and St. John, were sold to the United States for $25,000,000 in 1917. British East Africa, now called Kenya Colony, has been changed from a Protectorate to a Crown Colony. Italy is compensated in Africa to offset British and French acquisitions of former German territory, by an extension southward and eastward of Libya, and by the British cession of Jubaland (part of Kenya Colony). The Gilbert and Ellice Islands Colony was directly annexed to the British Empire in 1915, at the request of native governments.

NORTH AMERICA

Area. North America is third in size among the continents. In area it is considerably more than twice as large as Europe.

The coast line is lengthened by numerous indentations. Especially is the northwestern coast irregular. The extreme northwestern projection in Alaska approaches to within thirty-six miles of the continent of Asia. Indications are that the two continents were once connected by land in this region. The northeastern coast is also extremely irregular. South of Chesapeake Bay in the east and Puget Sound in the west, the coast line has few indentations and few good harbors.

A broad continental shelf borders the eastern shore and stretches for many miles out to sea. In the vicinity of Newfoundland this shelf becomes high and the water covering it is shallow. This part is known as the Grand Newfoundland Banks, the most famous codfishing region of the world.

Climate. North America stretches through 70 degrees of latitude or nearly 5,000 miles. The greater part of the continent lies well toward the north, where climatic differences between summer and winter are great.

Unlike the European conformation, the north and south trend of the great mountain systems prevents the influence of the oceans from reaching the interior. Especially evident is this on the western coast where the prevailing winds are westerly. The great cordillera stretching from Alaska to Central America checks the rain-laden winds, the western slopes receiving much rainfall especially during the winter, while dry regions are formed to the east.

In Mexico however, in the region of the eastern trade winds, the eastern coasts are humid and the western comparatively dry.

On the eastern coast the winds are mostly from the northeast and southwest, and the climate is subject to sudden changes. The southern and gulf coasts are affected by the southerly winds which bring a heavy rainfall and an equable temperature.

Population. The Indians, the original inhabitants of the continent, have almost entirely disappeared except for the Eskimos in Alaska, northern Canada, and Greenland, the Indians of Mexico and Central America, and a few scattered remnants in the United States and southern Canada.

The continent is now occupied by representatives of every nationality. The east central portion is most densely populated. The English language is predominant in the United States, the Spanish in Mexico and Central America, and the English and French in Canada. In the southern Atlantic and Gulf States of the United States, in Central America, and in the West Indies, are large numbers of negroes, mostly descended from slaves formerly brought from Africa. In the United States the various elements are rapidly merging into one great English-speaking nation. In Mexico, Spaniards and Indians have founded the modern Mexican nation. In Canada, elements apparently do not merge so quickly and French and English remain distinct to a considerable degree.

Immigration from Europe continues especially to the United States. Some settle in the cities, mostly Irish and Jews; others make their homes in agricultural and forest regions as the Scandinavians and the Germans in the northwest. Still others particularly from the southern European countries seek the mines and provide unskilled laborers for the railroads and factories.

Topography. The surface features consists of two great highland regions, the great western cordillera stretching from Panama to the farthest extremity of Alaska, and the eastern highlands, older, less high and less rugged than the western, stretching from Alabama to New Brunswick. In the northeast in the Labrador peninsula and north along the coast to the Arctic ocean is another highland region, very old and much glaciated and worn, called the Laurentian Highlands. Between the great eastern and western highlands is the broad central plain drained to the south by the Mississippi, to the north and east by the Mackenzie and the Nelson-Saskatchewan systems. The mighty St. Lawrence lake and river system divides the Laurentian from the Appalachian highlands. The great central plain slopes north and south from the low drainage divide near the Canadian-United States boundary, merging at the Gulf with the great Atlantic lowland plain, and with the Arctic and Hudson Bay coastal plain in the north and east. In the extreme northeast is Greenland, a possession of Denmark. Here is the most northerly permanent settlement in the world, Upernivik. The coast is bordered by mountains broken by great fiords. An ice sheet covers the interior, blotting out all irregularities of surface with its depth.

Between the ranges of the western highlands in the United States are great plateau regions, to the north the Columbia Plateau, central, the Colorado Plateau and the interior drainage region known as the Great Basin, and in Mexico the high Mexican Plateau.

The western cordillera rises abruptly from the eastern plains and extends in a comparatively unbroken line with few water gaps or passes. For this reason communication with the western coast by railway has been established with difficulty and at great cost.

The highest peaks of the western system are in Alaska, where Mt. McKinley, the highest, rises to an altitude of 20,300 feet. Other high points are found in Colorado and New Mexico, and in Mexico.

Many natural highways, on the contrary, have been cut by great rivers through the eastern highlands and these have been of paramount importance in the rapid development of the interior plain.

Agriculture. The agricultural lands in North America are among the richest in the world. To the north cereals predominate. To the south cotton, and in Mexico and Central America, coffee, cacao, rubber, and tropical fruits. The corn crop of the United States alone is almost three times the total corn production of all other countries combined. The wheat crop is second to the production in the great European plain, but it provides nearly one-third of the total wheat of the world. The United States is the leading country in the world in the production of oats, Canada ranking second.

In North America is the great cotton-producing region of the world, the annual output amounting to about twice that of the rest of the world. About half the production is exported for consumption in foreign countries. Other great crops are tobacco, sugar, hay, potatoes and other vegetables, rice, and fruits.

The exclusion of rain-laden winds from the Pacific by the western cordillera has created an extensive steppe region to the east of the mountains extending from Canada, through the United States, and far into Mexico. These vast grassy plains, which are semi-arid, and thus not fitted for agriculture without irrigation, are largely devoted to stock raising and supply the meat products necessary to provide the great mass of inhabitants in the continent. This industry forms the basis of the leading manufacturing industry, meat-packing and slaughtering. Large quantities of meat products are exported to Europe.

Stock raising is also of considerable importance in the east, particularly in Ohio. In the east the cattle are the basis of the dairying industry rather than of a meat supply. Canada is the greatest exporter of cheese in the world.

Forests. The principal forest regions of the continent are in southern and western Canada; in the Pacific, South Atlantic, Gulf, and Lake States of the United States; in Alaska; and the heavy subtropical forests in Mexico and Central America. The species range according to climate; coniferous trees chiefly in north; deciduous, in central area; and rosewood, mahogany, logwood, and rubber in south.

Fisheries. Coast and inland waters are rich in fish, particularly on the northeastern and northwestern coast, and in the Great Lakes. Cod, salmon, and oysters are the great sea fisheries. Seals abound in the northern waters.

Minerals. The United States is the leading coal-producing country in the world, though the production in the continent is not as great as that of Europe. Resources are, however, more extensive. North America is surpassed only by South Africa in the total amount of gold produced, and ranks first in the annual production of steel and petroleum.

The United States alone leads in the annual production of iron ore, pig iron, steel, coal, copper, and petroleum, and is second in the production of gold.

Over 86 per cent of the world's total production of petroleum comes from North America, the United States alone producing over 70 per cent in 1923.

UNITED STATES

Area. The total land area of continental United States, exclusive of non-contiguous territory, is 2,973,774 square miles, and the total water area 53,015 square miles. East and west the greatest extent is 2,780 miles, and north and south 1,600 miles.

Population.	Year	Population	Year	Population
	1890	62,947,714	1910	91,972,266
	1900	75,994,575	1920	105,710,620

Topography. The topography of the United States taken as a whole is comparatively simple. A general view of the surface reveals a great river valley extending from the northern to the southern limits, and bordered on each side by a great mountain system. On the west, the system, more massive, rugged, high, and extended, rises almost abruptly from the Pacific. The mountains on the east are separated from the Atlantic by a plain sloping to the sea, narrow in the north and increasing in width toward the south. These mountains are older, the heights rounded, and the altitudes much less than in the western system. The rolling lands of the intervening valley rise toward the east and the west, from low altitudes along the river to high broken plateaus which merge with the mountains. The valley slopes to the south, where the lowlands of the river continue along the Gulf Coast and unite with the Atlantic lowlands.

Climate. The climate of continental United States varies according to the wide extent of the country north and south, the surface configuration, and the influence of oceans and lakes. Lying in the southern half of the temperate zone, the climate corresponds generally with the degree of latitude, moderate in the north, and increasing in warmth toward the south. Proximity to bodies of water reduces the annual range of temperature considerably; mountainous conformation and high altitudes on the contrary cause a great increase in both the daily and annual range.

Government. The United States is a Federation of sovereign states, with a central government based on a constitution ratified by each State. The Federal Government is divided into three departments, the Executive, the Legislative, and the Judicial, vested respectively in the President assisted by a Vice-President and a Cabinet of ten Secretaries; the Congress, consisting of a Senate and a House of Representatives; and the Supreme Court, nine Circuit Courts, a Court of Claims, and a Court of Customs Appeals.

Education. There is a free system of public primary and secondary schools in each State, supported by state and local taxation. There are nearly 800 universities and colleges. In 1920, six per cent of the population over ten years of age were illiterate.

Mineral Resources. Our mineral resources are rich and varied. The precious metals are found principally in the Rocky Mountain division; coal in the Appalachian, Mississippi Valley, and eastern Rocky Mountain divisions; iron ore in the northern Lake States: and copper in Arizona, Montana, Michigan, and Utah.

Of the metals, iron ore is the first in value, followed by copper, silver, gold, zinc, lead, aluminum, platinum, quicksilver, manganese, antimony, and tungsten. Of the nonmetals, coal, petroleum, brick, and tile, natural gas, cement, stone, salt, sulphur, lime, and gypsum are the most valuable products. The quarries produce limestone, granite, sandstone, marble, slate, and clays. Coal makes up about one-third the value of all our mineral products.

Agriculture. The great agricultural lands of the United States are concentrated in the west central part of the Mississippi Valley. The states of Kansas, Missouri, Nebraska, Iowa, North and South Dakota, and Minnesota contain more than one-fourth of the total farm land of the United States. Including the states south of Missouri and Kansas, one-half of the total farm land of the country is accounted for. Outside the Mississippi Valley, the South Atlantic States form another great agricultural region.

The three great agricultural products of the United States are the cereals, hay and forage, and cotton. The cereals predominate in the north and central Mississippi Valley; hay and forage in the north and middle Atlantic states, and in the Rocky Mountain States; cotton in the South Atlantic States and southern states of the Mississippi Valley. The products of the Pacific States are about evenly divided between cereals, hay and forage, and fruit and nuts. Other great crops of the United States are vegetables, including potatoes, flowers and plants and nursery products, tobacco, and sugar. The United States is the greatest wheat and corn producer in the world. Corn constitutes about one-fourth the total value of crops produced. The United States contributes more corn and cotton than all the rest of the world combined, half the world's tobacco and over a quarter of its oats.

Coinciding with the great corn-producing regions of the valley are the swine-raising regions, Iowa leading all others as a hog producer. Vast numbers of sheep are raised on the semi-arid plateau of the northwest, and also in the east, principally in Ohio. Great herds of cattle are raised in the southwest on the great ranches in the semi-arid prairie region, and fattened for market in the central states.

Forests and Forest Products. The merchantable timber of the great original forests of the United States has been reduced by more than one-half up to the present time. The remaining merchantable timber, chiefly in the west and the south, is estimated at 2,215 billion board feet. The rate of cutting is 36 billion board feet a year, which is four times the annual growth. The chief timbers are pine, fir, hemlock, spruce, cedar, cypress, oak, ash, and hickory.

Fisheries. The value of the fishery products of the United States amounts to a vast sum annually. The important fishing grounds and catches are in the Columbia River district, where salmon is the important species, and on the north Atlantic coast where oysters and cod are the chief products.

Manufactures. The manufacturing industry is concentrated in the Middle Atlantic and the East North Central States, New York, Pennsylvania, Illinois, Massachusetts, Ohio, New Jersey, Michigan, Wisconsin, Indiana, and Connecticut providing about 70 per cent of the total value of manufactured products of the United States. The western states, however, particularly Missouri and California are showing a rapid rate of development.

Slaughtering and meat-packing is the leading industry of the country. Next in importance are the foundries and machine shops, the lumber industries, steel rolling mills, flour mills, printing and publishing establishments, and textile mills. The list of industries is long and varied, and the value of products in each is enormous.

Defense. The defense units of the United States include the Regular Army of 135,254, the Navy of 86,000, and the National Guard of 177,753 officers and men. The National Guard, organized in each State separately, may be called beyond the State borders. Aside from these units are the reserve organizations, the Organized Reserves, the Officers' Reserve Corps, Reserve Officers' Training Corps and Citizens' Military Training Camps. The last two units are training organizations for the Officers' Reserve Corps, which numbered 95,154 officers in 1925, and which in turn supplies officers for the Organized Reserves of nearly 100,000 experienced men, most of them veterans of the World War. It is their duty, in case of war, to recruit, mobilize and train the great civilian army that must necessarily be the main defense of the country.

The Navy comprises 17 battleships, 4 cruisers, and 103 destroyers, beside submarines, mine-layers, etc.

History. Following the discovery of America in 1492, English, Dutch, French, and Spanish explorers visited the coast of the region now included in the United States, but no settlements were made until 1565. A settlement was made by the English on Roanoke Island, North Carolina, 1585–87. The Dutch made settlements on Manhattan Island; and French penetrated the Mississippi Valley from Canada. The English finally won ascendancy over the Dutch and French, and took possession of the region along the coast as far south as Florida, and as far west as the Mississippi River. In 1776 the War of Independence broke out, and the United States of America was established. By various purchases and annexations, the new nation gradually acquired all the present United States territory: the Louisiana Purchase in 1803, the Florida Purchase from Spain in 1819, the annexation of Texas in 1845, the acquisition of the Oregon region by treaty, the acquisition from Mexico of the southwestern states in 1848, and the Gadsden Purchase in 1853.

We have taken part in six great wars: The Revolution; War of 1812, with England; with Mexico, 1846–48; Civil War; with Spain, 1898; World War of 1914–18 (entered April 6, 1917).

THE TERRITORIAL GROWTH OF THE UNITED STATES

NATIONAL territorial expansion forms the background for the political and economic history of the United States throughout the Nineteenth Century. Every acquisition of territory raised new problems of constitutional, legal, or political nature, and exercised a marked influence on the trend of national development. Although this expansion is inseparable from the general history of the country, each territorial addition forms an interesting history of its own, being a product of the circumstances, events, and opportunities of its period.

The present area of the United States and Possessions is approximately four and a half times that of the original United States as established by the Peace Treaty with England in 1783. The successive acquisitions of territory are listed in the accompanying table.

AREA	MANNER OF ACQUISITION	DATE	PRICE	SQ. MILES
U. S. in 1783	War of Independence	1783		845,882
Louisiana	Purchase from France	1803	$15,000,000	827,987
Red River Basin	British Treaty	1818		46,253
Florida	Purchase from Spain	1819	$5,000,000	72,101
Texas	Annexed by request	1845		389,166
Oregon Country	British Treaty	1846		286,541
Mexican Cession	Mexican Peace Treaty	1848	$18,000,000	529,189
GadsdenPurchase	Purchase from Mexico	1853	$10,000,000	29,670
Alaska	Purchase from Russia	1867	$7,200,000	586,400
Midway Island	Annexation	1867		2
Hawaiian Islands	Annexed by request	1898		6,406
Philippine Islands	Spanish Peace Treaty	1898		114,400
Porto Rico	Spanish Peace Treaty	1898		3,435
Guam	Spanish Peace Treaty	1898		206

Wake Island	Annexation	1900		3
Canal Zone	Panama Treaty	1904		549
Palmyra Island	Annexation	1912		6
Virgin Islands	Purchase from Denmark	1917	$25,000,000	133
Swains Island	Annexation	1925		1
Total U. S. and Possessions				3,738,405

See **Map of Territorial Growth of the U. S.**

The United States in 1783. The original boundaries of the United States were based upon claims of the thirteen colonies at the time of the Declaration of Independence, July 4, 1776, and were established by the Peace Treaty of September 3, 1783, which terminated the war of the Revolution with Great Britain. The area of the new nation extended from the Atlantic Ocean on the east to the Mississippi on the west, and from Canada on the north to Spanish Florida on the south. The Canadian boundary was essentially as it exists today. The southern boundary began at the mouth of the St. Mary's River, Florida, followed that stream to its head, thence straight west to the junction of the Flint and Appalachicola Rivers, thence up the middle of the latter stream to 31° North Latitude, and thence due west along that parallel to the Mississippi River.

At the time of the treaty Great Britain was at war with Holland, France and Spain. This circumstance enabled Franklin and Jay, the American Peace Commissioners, to negotiate more favorable territorial terms than would otherwise have been possible.

The Louisiana Purchase, 1803. One of the most important factors in the lives of our western settlers was the transportation of their commerce down the Mississippi River to the Gulf of Mexico. The occupation of New Orleans and the Lower Mississippi by a foreign power offered a constant menace to our western development and trade, since the nation that controlled New Orleans could also control the river commerce.

The Louisiana territory was originally held by France. In 1762 it had been transferred to Spain, only to be "retroceded" to France in 1800 as a result of Napoleon's desire to establish a great colonial empire in America. When the facts of this transfer became known, Jefferson informed Napoleon that the nation which held the mouth of the Mississippi was an enemy of the United States, and sent Monroe to Paris to negotiate for the purchase of New Orleans and Western Florida. In the meantime, Napoleon was forced to give up his plans for an American empire, due to the defeat of his military forces in Santo Domingo and to the imminence of another war with England.

As a result of these developments Napoleon offered to sell the entire Louisiana Territory to the United States. Monroe, who was authorized to purchase New Orleans and Western Florida only, took counsel with Livingston, the American Minister to France. They concluded to avail themselves of the opportunity presented and signed the treaty on April 30, 1803, in the name of the United States, purchasing this vast territory west of the Mississippi for $15,000,000. The senate ratified the treaty on October 20, 1803.

The Red River Basin, 1818. The northern boundary, west of Lake of the Woods, became the first source of dissension between England and the United States after the treaty of 1783. This was due to the lack of geographical knowledge of the Mississippi River, which was believed to extend above 49° North Latitude. By the Treaty of London in 1794, the question was postponed until such a time when amicable settlement could be practically negotiated. There the matter rested until 1818 when the 49th parallel was voted acceptable by both nations.

This acquisition included the drainage basin of the Red River (of the north), south of 49°, an area of 46,253 square miles.

The Florida Purchase, 1819. Florida, our next territorial addition, was not acquired until after long and difficult diplomatic adjustments. In 1802 the King of Spain refused to ratify a treaty ceding Florida to the United States because of unsettled points relative to territorial claims. Efforts to adjust difficulties between the two countries failing, diplomatic relations were broken off in 1808. In 1815, however, these relations were resumed, and on February 22, 1819, a treaty was concluded whereby Spain ceded Florida to the United States in consideration of an amount of $5,000,000. This treaty was not ratified by Spain until 1821.

Texas Annexation, 1845. In 1836 Texas revolted from Mexico and declared her independence. Continual warfare in defense of her liberty caused her to seek annexation to the United States. However, political controversies delayed Congressional action in the case until England offered assistance to Texas in return for commercial favors. Congress, not desiring to see any extension of Great Britain's influence in America, passed a joint resolution for annexation on March 1, 1845, and Texas was admitted to the Union as a full-fledged state.

The Oregon Country, 1846. The United States based its claim to the Oregon Country on the discovery of the Columbia River by Captain Gray in 1792, and on the explorations and discoveries by the Lewis and Clark Expedition in 1805. This claim was further strengthened through the settlement and development of the region by American pioneers.

The original area extended from 42° to 54° 40′, North Latitude, and from the Rocky Mountain Divide to the Pacific Ocean. Spain and Russia, who had voiced claims in unison with the United States and Great Britain, eventually ceased to be contenders, and the territory was occupied jointly by the latter two countries for a period of twenty years.

No definite action was taken until the question of annexing the Oregon Country became a presidential campaign issue. When Polk, who had supported the cause, was elected, he immediately offered England a settlement of the boundary along the 49th parallel. Upon her refusal, notice was given by the United States to terminate the joint occupancy agreement, and the erection of forts in Oregon was begun. This action led to negotiations which resulted in the Treaty of June 15, 1846, establishing the 49th parallel as the boundary line. By this treaty the territory of the United States was extended to the Pacific Ocean between 42° and 49° of North Latitude.

The Mexican Cession, 1848. As a result of boundary disputes along the Texas-Mexico border the United States was drawn into a war with Mexico in 1846. Hostilities were brought to an end during the latter part of 1847 with victory for the American forces. In the peace treaty of Guadalupe Hidalgo, February 2, 1848, the United States acquired the great region extending from Texas to the Pacific and from 42° North Latitude to approximately our present southern boundary, for a consideration of about $18,000,000. The area was subsequently divided into the states of California, Nevada, Utah, most of Arizona and New Mexico, and part of Colorado.

The Gadsden Purchase, 1853. The Gadsden Treaty of December 30, 1853, provided for a readjustment of the boundary with Mexico established by the Treaty of Guadalupe Hidalgo. The strip of territory, created by this adjustment, was ceded by Mexico to the United States for the sum of $10,000,000, and is now part of the states of Arizona and New Mexico.

The Alaska Purchase, 1867. On March 30, 1867 William H. Seward, then Secretary of State, negotiated the purchase of Alaska from Russia for the sum of $7,200,000. The transaction was called by many "Seward's Folly," as the area was considered nothing but a mass of glaciers and frozen waste. Seward, however, considered it his greatest service to the government.

Since then the region has proven itself to be one of the richest countries in the world in point of natural resources. The fisheries alone have yielded more than $700,000,000, and fur has been taken to the extent of over $100,000,000. Mineral products exceeding a value of $550,000,000 have already been extracted, while the wealth of the remaining deposits is practically beyond estimation.

Alaska constitutes all of continental North America west of the 141st Meridian, an extensive strip of land and islands along the Pacific Coast between Mount St. Elias and Dixon Entrance, the Aleutian Archipelago, and many other islands; the total area being 590,884 square miles.

The Hawaiian Islands, 1898. Hawaii was annexed at her own request after deposing her queen and establishing a republic in 1893. A clause in her constitution authorized a treaty of "political or commercial" union with the United States, but President Cleveland opposed the negotiations and the matter received no definite attention for a number of years. When the Spanish-American War broke out, the United States utilized the islands for naval purposes on account of their strategic position. As a result of this, a joint resolution for annexation was passed by Congress on July 7, 1898. In 1900 a territorial form of government was provided by a special Act of Congress.

The Spanish War Acquisition, 1898. The Spanish-American war was occasioned by American intervention in the Cuban revolt against Spain in 1898. The misgovernment of Cuba had for a number of years incited the sympathy of the United States, but it was not until February 15, 1898, when the battleship "Maine" was destroyed in Habana harbor, that actual war was declared. After a number of engagements on land and sea, in which the Spaniards were defeated, peace was concluded at Paris on December 10, 1898. By the terms of the treaty which was ratified by Congress on February 6, 1899, Spain ceded the Philippine Archipelago, Guam in the Marianas, and Porto Rico to the United States.

The Panama Canal Zone, 1904. The Hay-Herran Convention of January 22, 1903, provided for the lease of a strip of territory across the Isthmus of Panama, but the proposition was rejected by Colombia. Shortly thereafter Panama revolted and established an independent government. By the treaty of November 18, 1903, with the new Republic of Panama, the United States secured in perpetuity the territory known as the Canal Zone, for the purpose of constructing and maintaining a canal between the Atlantic and Pacific Oceans.

Other Island Acquisitions. In 1899 the United States acquired some of the Samoan Islands, the principal ones being Tutuila and Manua, by international treaty with Germany and Great Britain. Swains Island, about 200 miles farther north, was claimed and designated to Samoan jurisdiction in 1925 by a Resolution of Congress.

Midway Island, west of the Hawaiian group was annexed by the United States in 1867. Wake Island and Palmyra Island were acquired in 1900 and 1912 respectively, when American seamen took possession of them in the name of their government. Marcus and Johnston Islands are claimed by the United States by reason of discovery during the Nineteenth Century.

The Virgin Islands, lying east of Porto Rico in the West Indies, were purchased from Denmark in 1917 for the sum of $25,000,000.

MAINE

Area. The gross area of Maine is 33,040 square miles, of which 3,145 square miles are water surface. The State ranks thirty-eighth in size in the Union.

Population.

Year	Population	Year	Population
1900	694,466	1920	768,014
1910	742,371		

According to the last census the total population of the 20 cities of over 2,500 inhabitants has increased 14.2 per cent since 1910. The population in rural territory decreased.

Topography. The surface of a large portion of the State is rugged and broken, forming part of the "New England uplands," dissected by numerous stream valleys, and broken by isolated mountain peaks. The highest peak is Mt. Katahdin, 5,268 feet. Southwest of Katahdin are most of the high peaks of the State: Saddleback Mountain, 4,000 feet; Mt. Abraham, 3,388 feet; Mt. Bigelow, 3,600 feet; and Mt. Blue, 3,200 feet. A little north of this line of mountain peaks is the water-parting, which divides the State into a north slope and a south slope. The north slope descends gently both to the north and to the east. The south slope contains nearly all the mountains and is generally more rugged and hilly. The continental glacier, or ice sheet, overran all Maine, irregularly scouring out the bed rock to produce rock basins, damming up many river valleys and completely disarranging the drainage lines. When the ice melted, the rock basins and the dammed-up valleys filled with water to produce lakes. The coast is fringed with promontories and rocky islands.

Climate. Maine lies almost equidistant between the equator and the pole. Summer heat is tempered by the sea and the cool north winds, and the winter cold is so constant as to be less severely felt than the changing temperature of more southern districts. The summers are short, there being only about four and a half months between frosts. The mean summer temperature is about 62°, that of winter approximately 20°. The mean annual temperature for the entire State is 42°. The annual precipitation is about 42 inches. Of this, during four and a half months, nearly 44 per cent is in the form of snow, the fall varying from 60 inches on the coast to more than 100 inches on the north slope. In summer the cool, moist winds from the north and the northeast cause a considerable part of the State to be enveloped in fog for several days at a time.

Soils. Glacial drift, containing a large mixture of clay with sand or gravel, comprises the greater part of the soil. The subsoil is mostly "hard pan," mingled clay and bowlders, which have been so much compressed by glacial action as to make the mixture hard and ledge-like. The most sterile regions are on the mountains and along the coast. Along the Kennebec, Penobscot, and several other rivers the soil is very productive. In the Aroostook Valley is the largest undivided area of good, arable land in all New England. The soil there is a deep, porous, yellow loam, well adapted to the growing of cereals and to market gardening.

Mineral Resources. Granite, limestone, clay products, slate, and mineral waters are the principal mineral products of Maine. Of these, granite is the most important. The stone is of superior quality, and most of it is used for building purposes; much is used as paving blocks, and some for monuments. It is well distributed over the State, being found in every county. The resources are said to be inexhaustible. Limestone abounds, especially in the southeastern part, but its color renders it unfit for building purposes and nearly all of it is burned into lime. Maine is one of the three leading states in the production of slate, a broad belt of which extends across the State from the eastern border to the Kennebec River. In the value of feldspar produced, Maine holds first place.

Agriculture. Only the most fertile lands and those more easily tilled have been retained under cultivation. Agriculture in Maine is a smaller industry than manufacturing because of the cold climate, the large areas in which there is little or no arable land, and the large and constant supply of water-power for manufacturing afforded by the principal rivers. The less fertile lands have been found to yield a greater income as permanent pastures than as meadow or plow lands. The chief agricultural crops are potatoes—contributing over half of the total value—hay and forage, fruits, oats, wheat, buckwheat, and corn. The cultivation of cereals has fallen off to a marked degree in nearly all the farming districts except in Aroostook County, giving place to market gardening, dairying, and egg and poultry production. Cabbages, turnips, cucumbers, and tomatoes are raised in great abundance. The principal orchard fruit is apples.

Large numbers of milk cows, sheep, horses, and swine are raised.

Forests and Forest Products. Maine is one of the leading states in the cut production of spruce, fir, birch, hemlock, and white pine, lumber, and pulpwood. The State was once covered with forests of which about 30 per cent have now been cleared.

Fisheries. The fishing industry has long been important in Maine, enormous catches of herring, lobsters, clams, cod, haddock, salmon, smelt, mackerel, sardines, and other varieties being taken off the coast.

Manufactures. There is considerable diversity in the manufactures of Maine, although five industries predominate — the manufacture of paper and wood pulp, lumber, cotton goods, woolen goods, and boots and shoes — which together comprise two-thirds of the value of the products. In wooden ship building, this State leads all others, and has built the only six-masted schooners in the world. It was not until the nineteenth century that the large and constant supply of water-power afforded by the rivers began to be used to any considerable extent. Then cotton and woolen mills were built, and some of the largest paper and pulp mills in the country were erected. The State ranks first in the manufacture of wood pulp. The lumber industry has been from the earliest times and is now one of the most important industries. Maine is one of the leading states in canned and preserved fish, in the output of paper mills, and in the output of woolen mills. Portland, Lewiston, Bangor, Biddeford, Bath, and Auburn are the leading manufacturing cities.

Transportation. The principal railway system is the Maine Central, which enters every county but one. There are about 520 miles of electric road. The Kennebec River is navigable for coast vessels to Augusta, the Penobscot to Bangor, while several other rivers afford steam navigation. Portland is the principal port.

Defense. The National Guard comprises one regiment of infantry, one of coast artillery and one battalion of field artillery, with a strength of 1,995 men in 1925.

History. Numerous explorers were attracted to the coast of Maine during the sixteenth century and the early part of the seventeenth. Among these were Giovanni da Verrazzano (1524), Estéban Gomez (1525), Bartholomew Gosnold (1602), Martin Pring (1603), Pierre du Gast, Sieur De Monts (1604), George Weymouth (1605), and John Smith 1614, who explored and mapped the coast and gave to the country the name of New England. In 1603 De Monts received from Henry IV of France a charter for all the region between 40° and 46° north, under the name of Acadie or Acadia, and the following year built a fort on Neutral Island at the mouth of the St. Croix River, which he later abandoned. In 1607 the Plymouth Company, which had received a grant of this land from James I of England, established a colony at the mouth of the Kennebec River. The first permanent settlement in Maine was made at Pemaquid about 1624. Until the formation of Maine as a State, Massachusetts held most of Maine, the region having been sold and also granted to the Massachusetts Bay Colony. At the close of the Revolutionary War British claims to the Maine region were ceded to the United States. In March, 1820, Maine was admitted to the Union with substantially its present limits.

Places of Interest. The state has long been noted for its summer resorts, due to the invigorating climate, the picturesque coast, the many islands, and beautiful lakes and rivers. In fact the entire coast from Kittery Point to Eastport is just one great resort in summer. Among the more widely known points are Bar Harbor, situated on Mount Desert Island; Old Orchard, with a white sand beach nine miles long; Long Island, Orr's, and other islands in Casco Bay. Rangeley and Moosehead lakes, and Mt. Katahdin, in the heart of the moose country, are favorite resorts for fishermen and hunters. North of Rockland, on the coast, is Mount Battie, 1,400 feet in altitude, a favorite climb for tourists because of the beautiful view from its summit. Lafayette National Park is on Mount Desert Island.

NEW HAMPSHIRE

Area. New Hampshire has an area of 9,341 square miles, of which 310 square miles are water surface. The State ranks forty-third in size in the Union.

Population.

Year	Population	Year	Population
1850	317,976	1900	411,588
1860	326,073	1910	430,572
1870	318,300	1920	443,083
1890	376,530		

The rate of increase of population in New Hampshire falls far below that of the United States as a whole. From 1790 to 1920 the population of the State increased only a little more than threefold, while in the United States the population in 1920 was more than twenty-six times that in 1790.

Topography. The surface of the State is much broken by mountain ranges, by isolated mountains, and by numerous ridges. In the north the White Mountains rise abruptly in short ranges and outlying mountain masses. The summits are generally rounded, and for the most part the mountains are clothed with vegetation. The highest point in the system is Mount Washington, reaching an altitude of 6,293 feet. Fifteen other summits exceed 5,000 feet. This mountain region abounds in lakes and waterfalls, and numerous deep ravines and valleys. North of the White Mountains the land is occupied by high ridges and wide rolling valleys. Southward a plateau region broken by residual mountains and lenticular hills, slopes gradually southeastward to the sea. Numerous high ridges occur, even in the low region near the coast.

Climate. The winters in the State are usually of considerable severity and the summers are cool. Difference in altitude and proximity to the sea cause considerable variations in different regions. The greatest range of temperature occurs in the deep mountain valleys where 102° Fahr. in summer and −38° in winter are often recorded. The mean annual temperature ranges from 41° in the north to 47° in the southeast. The mean annual rainfall is about forty inches.

Soils. The soils of the uplands are rough and rocky. They are formed mostly by glacial action on granite, with reworking of the glacial deposit by rivers. In the southeastern parts of the State the soil is formed mostly of disintegrated slate. In the bottomlands of the Merrimac and the Connecticut the glacial drift is covered to a considerable depth by alluvial deposits.

Mineral Resources. New Hampshire is known as the Granite State. The principal mineral product is granite of varying textures, quality, and color. The less valuable grade is used for paving blocks and construction work, and the finer qualities for buildings and monuments. Other abundant mineral products are clay, mineral waters, mica, and a quartz schist used for whetstones and oil stones. Topaz occurs on Baldface Mountain near North Chatham.

Agriculture. The land surface of New Hampshire totals about 5,779,840 acres. About 45 per cent of this area is included in farms. The farm acreage is now considerably less than in 1910 and continues to decrease. The presence of bowlders in the soil of the uplands, and the general topography have prevented the introduction of farm machinery for cultivation on a large scale. In fact, the general sterility of the soil in comparison with the advantages of the great agricultural states of the West has caused many owners and tenants to abandon their farms and emigrate. This accounts considerably for the low rate of increase of population.

The abandonment of the farms led to the development of the country as a summer resort, and the entertainment of guests in the mountain and lake regions became an important occupation. The farm houses and cottages were sold as country homes and the production of vegetables, fruits, dairy products, and poultry supplanted that of cereals.

The chief agricultural crops are hay, corn, potatoes, and oats. Considerable fruit is raised, chiefly apples.

Stock raising is an important factor in New Hampshire products. With the decline of agriculture, dairy cows and horses increased considerably in number, while hogs, sheep, and cattle other than dairy cows decreased.

Forests and Forest Products. The White Mountain region and north of it is forest country, almost all of which has been cut over. Considerable areas in the south, formerly agricultural lands, and much of the northern denuded lands are being covered with a new growth. The chief merchantable timbers are spruce, white pine, hemlock, birch, and balsam.

About 3,600,000 acres are under forest.

Manufactures. Abundant water power has permitted the development of extensive manufactures, and New Hampshire has become chiefly a manufacturing community. In sixty years, manufactures as a whole increased over thirteenfold in value of output. Textiles, and boots and shoes lead the products in value. Combined, the textiles form about 33 per cent of the total value of manufactures in the State. Cotton goods, woolen and worsted goods, hosiery and knit goods are the components of the textile product.

The manufacture of lumber and timber products is next in order according to value. This industry is among the oldest in the State, and comprises logging establishments, sawmills, planing mills, and box factories. Spruce and white pine are the principal timbers.

Other leading products, based on the natural resources of the State, are paper and wood pulp, flour mill and gristmill products, marble and stone work, butter, cheese and condensed milk, leather goods, and brick and tile. Other industries ranking high are foundries and machine shops, bakeries, and breweries.

Leading industrial centers are: Manchester, textiles, boxes, cigars, boots, shoes; Nashua, cotton goods, cards, glazed paper, engines; Berlin, lumber, pulp, paper; Portsmouth, cotton goods, iron castings, shoes, ships; Dover, textiles, boots, shoes; Concord, textiles, carriages, auto-trucks, belting; Laconia, hosiery, cars, knitting machinery.

Transportation. Railroad building was first begun in 1835. At present over 1,240 miles have been completed. The Grand Trunk Line crosses the northern part of the State. All other lines are part of the Boston and Maine System. The Cocheco River is navigable as far north as Dover, and there is considerable local traffic in coal and building material on that river and at Portsmouth, the only port of entry on the sea.

Defense. The New Hampshire National Guard is made up of one battalion of field artillery and a regiment of anti-aircraft artillery, including 1,052 men in all.

History. New Hampshire is one of the original thirteen colonies. The region was first observed by Martin Pring in 1603 from the mouth of the Piscataqua. In 1605, Samuel de Champlain sailed along the coast and discovered the small islands lying there. John Smith gathered more information in 1614. Six years later Mason and Gorges were granted a large piece of this land in company, and grants were also given them individually. Other grants were made to various persons and companies, and in 1641 all settlements were joined to the colony of Massachusetts. In 1679 New Hampshire was declared a separate royal province, but was not granted a charter.

The undisputed first settlement was made at what is now Little Harbor, the town of Rye, in 1623, by a David Thomson. From 1676 to 1759 New Hampshire was severely ravaged by Indian wars, and settlement was greatly retarded. There were frequent boundary disputes with neighboring provinces. During the war of Independence, the province had about 80,000 inhabitants. On the fifteenth of June, 1776, New Hampshire declared for independence. In 1788, after some hesitation, the Federal Constitution was adopted, and New Hampshire became one of the United States of America.

Places of Interest. The mountain lakes and woodlands of New Hampshire have made the State a favorite summer resort. The whole region is rich in beautiful scenery. Lakes and ponds of great beauty number several hundreds. The largest lake and most popular is Lake Winnepesaukee lying in close proximity to picturesque mountains and hills. Other places of great attraction are Colebrook with the finest trout fishing in the State; Glen Ellis Falls in the White Mountains near Jackson; beautiful Intervale and the Cathedral Woods; Lancaster, Franconia, Crawfords, North Conway, Sugar Hill, and countless others. Rye Beach is the most frequented beach in the State.

VERMONT

Area. Vermont has a total land area of 9,124 square miles. The water surface comprises 440 square miles, making a gross area for the State of 9,564 square miles. Vermont ranks forty-second in size in the Union.

Population.

Year	Population	Year	Population
1850	314,120	1900	343,641
1860	315,098	1910	355,956
1870	330,551	1920	352,428
1890	332,422		

The average number of persons to the square mile in Vermont is thirty-nine. The density is greatest in the northwest, and lowest in the northeast. Over two-thirds of the population is rural — i.e., living in the country or in villages of under 2,500 inhabitants.

Topography. Vermont lies in the plateau-like upland of New England, the surface much broken by mountains. The principal range is the Green Mountains, running north and south through the State near the middle. This range is little broken except in the north, where river valleys cut it deeply. Mount Mansfield, 4,437 feet, is the highest point in the State. West of this central range the country is broken by another smaller range, the Tacoma Range, and by a number of rugged uplifts and escarpments running north along the shore of Lake Champlain. The eastern division is occupied by high hills and deep-cut valleys, and, close to the border, by the Granitic Mountains. The most level regions are in the north on the gentle slopes of the Green Mountains and near Lake Champlain. Lake Champlain in the extreme northwest lies in the valley between the Green Mountains and the Adirondacks. There is much beautiful natural scenery in Vermont afforded by the many mountains, lakes, valley gorges, and streams.

Climate. The winters in Vermont are long and severe, and the summers cool. The mean annual temperature is 43° Fahr. Extremes recorded for the State are –28° and 100°. The coldest parts of the State are in the central portion, where the highest altitudes occur.

The mean annual precipitation at Burlington, on east shore of Lake Champlain, is 31.56 inches.

Soils. In general the soils are formed of glacial drift, largely clays, sand, and gravel varying much in depth of deposit. The soils of the elevated regions are generally sterile and stony. The best farming areas are found in the west and north where the soils consist of clays and sand. In the west are frequently found deposits of limestone clays and shell marls, making excellent soils for cultivation.

Mineral Resources. Building and monumental stone are the principal mineral products of Vermont. The State is famous for its production of fine marble of varied color and texture, granites, and limestone. About half the marble produced in the United States comes from Vermont. The largest granite quarries in the State are located near the city of Barre. In production of slate, Vermont ranks next to Pennsylvania; and ranks with the first of the States in output of granite, marble, talc, and asbestos.

Agriculture. Agriculture is the leading occupation within the State, though the stage has long since been reached when all the cultivable areas have been occupied. Since 1910, the total farm acreage has decreased about 428,000 acres; but there has been a marked increase in improved acreage.

The principal crop is made up of hay and forage, which contributes about three-fifths of the total agricultural output of the State. Next in order according to value of product come potatoes and other vegetables, cereals in comparatively small quantities, fruits and nuts, flowers, plants, and nursery products. Oats and corn are the leading cereals. Apples contribute nearly all of the orchard fruit crop, and pears most of the remainder.

The live-stock branch of agriculture is growing in Vermont, particularly the raising of milk cows, which forms the basis of a great dairy industry leading that of other States in per capita output. Fine blooded horses and Merino sheep are bred extensively.

Forests and Forest Products. The reduced forests of Vermont still yield considerable spruce, hemlock, white pine, and birch. About 42 per cent of the land area of the State is occupied by woodland, with frequent stretches on farmland, yielding merchantable products.

Forest products on farms are an important item of agricultural production, and include firewood, fencing material, logs, railroad ties, telegraph and telephone poles, barrel staves, bark, and naval stores. Forests not on farms also provide extensive supplies of timber. The production of maple sugar and syrup is important.

Fisheries. The fisheries of Vermont are of commercial importance, particularly those of Lake Champlain. Wall-eyed pike is the most valuable species of the catch. Others are pickerel, white fish, yellow perch, sturgeon, suckers, smelt, sunfish, and eels.

Manufactures. The manufactures of Vermont are dependent mainly on the natural resources. The principal industry is the working of marble and stone, concentrated near the great quarries at Barre. The supply of marble and granite is practically unlimited. In the output of marble, the State has long held first rank among the states of the Union.

The production of timber and lumber, one of the oldest industries, is still considerable, and of late years wood pulp has become an important output. The forests, however, are not inexhaustible, and the lumber industry is slowly receding.

An industry of great importance is the manufacture of butter, cheese, and condensed milk. Others are the making of textiles, principally woolen and worsted goods, shoddy, felt, scales, machinery, woodwork, organs, piano sounding-boards, flour, etc.

Transportation. The main railroad systems in Vermont are the Central Vermont (Grand Trunk), the Boston and Maine, and the Rutland line of the New York Central system. These main lines operate numerous roads over the country, providing outlets in all directions. Lake Champlain is connected by canal with the Hudson River, thus affording communication with New York and the sea. Communication with Canada is accomplished by a canal connecting the lake with the St. Lawrence River. Otter Creek is navigable from Vergennes to Lake Champlain. The chief lake port is Burlington, and much trade is carried on in coal, wood pulp, building material, and general merchandise.

Defense. The National Guard includes one regiment of infantry and an ambulance company. In 1925 there were 1,161 men in the units.

History. The French were the first to enter the region now included in Vermont. The visit was occasioned by an expedition against the Iroquois Indians in 1609 led by Samuel de Champlain, No settlement, however, was made until in 1665, when the French built a fort on the Isle de la Motte. The first permanent white settlement was made in 1724 near the site of the present town of Brattleboro by a party from Massachusetts. Until 1741 both New Hampshire and Massachusetts claimed the settlements, but in that year the royal decision was in favor of New Hampshire. From then on until the Revolution, New Hampshire disputed with New York for possession of Vermont. In 1764 New York in turn was favored by royal decision, and the settlers who had received grants from New Hampshire were ordered to give them up and repurchase from New York. The settlers resisted, and in 1777 called a convention at Westminster, which declared the Grants, as the settlements were called, an independent State under the name of New Connecticut. A constitution was drafted, and Vermont continued as an independent republic until 1791, England offering to recognize the State as a separate royal province. The offer was not accepted. Boundary disputes with New Hampshire were settled in 1782, and with New York in 1790.

In 1791 Vermont became one of the states of the Union, being the first to be admitted after the adoption of the Federal Constitution by the original thirteen states.

Places of Interest. Vermont contains many historic places, and is full of resorts made popular because of their great natural scenic beauty. The Green Mountains are widely known for their attractions. Among the resorts in Vermont are Ludlow, Hartford, Grand Isle, Pittsford, Newport, Manchester, Randolph, Waterbury, Sharon, and Clarendon.

SCENIC NEW ENGLAND

New England is the birthplace of the nation, and has limitless possibilities as a holiday playground for its grown-up children. It revels in trees whose maple sap sweetens life from end to end of America, its golf courses seem chosen and marked out by the judicious yet lavish hand of Dame Nature herself, while beneath the soil are the choice veins of marble which beautify the homes of its people, who find their chief glory in its many shrines of historic interest. Its shady streams are well stocked with the delicious fish which tempt the sportsman to unwind his reel, and its forests echo to the sound of his gun as he reaps the rich rewards of a sure eye and steady hand. Its lofty mountains covered with velvety verdure, its winding brooks and rivers, its beautiful lakes of sparkling water, and productive acres which make the table of that section of the country groan with their weight of good things, constitute it the delight of all true lovers of the out-of-doors. Curious caverns may be detected by an observant eye, while natural bridges span dizzy heights, connecting fascinating formations of solid rock. All the delights and wonders of the sea are at its door, for the waves of the broad Atlantic wash the shore of the greater number of its states.

Near the village of Winooski, in the northwestern portion of the state of Vermont, is a gorge of the same name in which the Winooski river falls approximately twenty feet. The scenery along the banks of the stream is exceedingly beautiful, natural bridges and deep caverns marking its course as it passes through the Green Mountains and enters Lake Champlain five miles beyond Burlington.

For the state affectionately nicknamed "Little Rhody" the Indian designation "Aquedneck" was changed in 1644 to the Isle of Rhodes or Rhode Island. Whaling was its earliest industry, but it is now chiefly a manufacturing center. Abounding in productive farms as the result of exceptionally fertile soil, the state boasts utility as well as beauty, much of its scenery being very picturesque.

THE OLD STONE MILL, NEWPORT, RHODE ISLAND

At Rhode Island's famous seaside resort, Newport, among the chief points of interest is Truro Park, the gift of one of the town's wealthy Hebrew residents. In it is the statue of William Ellery Channing, and the interesting old Round Tower erected by Governor Arnold in the seventeenth century, long serving the prosaic purpose of a windmill, but whose fame Longfellow has perpetuated in his well known poem, "The Skeleton in Armor."

In its Berkshire country Massachusetts can rightfully lay claim to one of the most beautiful regions of the United States. Coaching through the Berkshire Hills is comparable to a tour through the Lake country of England in scenic charm and literary association.

MASSACHUSETTS

Area. The total area of the State is about 8,266 square miles of which 227 square miles are water surface. Massachusetts ranks forty-fourth in size in the Union.

Population.

Year	Population	Year	Population
1900	2,805,346	1920	3,852,356
1910	3,366,416		

Since the first census, in 1790, the population of Massachusetts has multiplied over ten times. The population classified as urban is more than 94 per cent of the total population. Massachusetts is second in density of population.

Topography. The State is divided into four principal physical regions: the low coastward plain; the eastern highlands; the Connecticut Basin, with which is included the Holyoke Range; and the western highlands, with the infolded Berkshire Valley. The Hoosac Mountains, 1,200 to 1,600 feet high and separating the valleys of the Housatonic and Connecticut, are a range of the Berkshires, a part of the Appalachian system and a continuation of the Green Mountains of Vermont. These, with the Taconic range on the west side of the Housatonic Valley in the extreme northwest corner of the State, form the only considerable elevated land. East of the Connecticut Valley the country continues more or less hilly and rocky. The southeast corner of the State is a sandy lowland.

Climate. The climate exhibits great extremes in annual temperature, ranging from 20° below zero to 100° above. The southeastern coast and island climate is mildest. The mean annual temperature of Boston is 48°. In the interior it is slightly lower. The mean summer temperature generally over the State is about 70°.

On the coast the climate is considerably tempered by the ocean. Changes are often sudden and the springtime is short. In the elevated region in the west the winters are decidedly severe and spring and summer are frequently late and cold. The yearly precipitation is from 39 to 45 inches, decreasing inland, and is evenly distributed throughout the year. Fogs are common on the coast. In the summer and autumn the weather is usually fine, especially in the Berkshires, where a cool, pure, and elastic atmosphere prevails.

Soils. The soils of Massachusetts are derived either directly or indirectly from the glaciation of the entire area of the State and in their general features fall within a few classes. Nearly every square mile however, contains a considerable number of soils which differ in detail. Along the eastern coast the till-covered upland is bordered by sandy and gravelly outwash plains which occupy all the lower elevations and are only interrupted by low rolling hills, with their heavier till soils. On lands along the borders of the streams, upon more level areas, and wherever the soil is finely textured, corn and hay and tobacco are the chief products. In the vicinity of Boston and in the valleys of the Merrimac and its tributaries are sand and sandy loam soils well adapted for market-gardening. In the Berkshire Valley, in the western part of the State, the soils have been derived through the glaciation of the underlying limestone, and are good for grass and corn.

Mineral Resources. Granite is the most important mineral product of Massachusetts. Other fine building stones are quarried to a considerable extent, and clay of good quality is found in many parts. Granite bowlders were used for construction in Massachusetts as early as 1650. The principal granite quarries are located at Milford, Quincy, Milton, and Rockport. Massachusetts is one of the leading states in the production of trap rock, sandstone, and marble. Small quantities of coal and iron ore occur in the west. Other minerals are emery, limestone, and quartz. Gold has been found in small quantities. There are many mineral springs in the State.

Agriculture. Despite the poor soils intensive cultivation has produced valuable market gardens about Boston and the larger towns. Near-by markets and excellent transporattion encourage farming. Cereals have been declining for many years, although Indian corn is a valuable subsidiary for the dairy interest, which is the most thriving branch of farm industry. In the swamps and bogs of the southeast coast the culture of cranberries is carried on. Tobacco is grown in the Connecticut Valley and on its borders.

Fishing. Over ten million dollars worth of fish are brought into Massachusetts annually, mainly through Gloucester and Boston. Cod, haddock, mackerel, halibut and shell fish are the chief catches.

Manufacture. Massachusetts is one of the most important manufacturing states in the Union, although most of the raw materials used are produced elsewhere, and most of its manufactured products disposed of outside the State. Superior water power advantages which the rivers afford, good transportation facilities, and early individual development have placed Massachusetts in the front rank as a manufacturing center. Boston, the second seaport on the Atlantic coast, has excellent opportunities for domestic and foreign commerce. Several other cities and towns have good water facilities. Immense water power is developed on the Merrimac at Lawrence and Lowell, and on the Connecticut at South Hadley. Many of the machines that have revolutionized industrial conditions since the beginning of the factory system have been invented by Massachusetts men. The leading manufactures are: boots and shoes, cotton and woolen goods, and machine-shop products. Among the lesser interests are: rubber goods, tanned leather, paper and wood pulp, slaughtering and meat-packing, printing and publishing, clothing, electrical machinery, lumber, iron and steel, cordage and twine, furniture, shipbuilding, jewelry, and confectionery.

Transportation. There are approximately 2,092 miles of steam railroad trackage and 2,688 miles of electric roads, which connect the various manufacturing districts of the State with the leading industrial centers and those of other states. The Cape Cod Canal, thirteen miles long, was built in order to shorten the distance by water from Boston to New York and eliminate the dangerous voyage around the cape. The Connecticut River, the largest stream in the State, is navigable by small craft. Boston, and several other cities and towns, are provided with good water facilities, which promote communication and trade with ports outside its boundaries.

Defense. The National Guard includes the entire 26th Division beside a squadron of cavalry, one regiment of colored infantry, and a regiment each of coast and anti-aircraft artillery, a total of 9,817 men.

History. The State derives its name from the Massachusetts Indians, the word probably meaning "at the great hills." The region now constituting Massachusetts was included in grants made in the patent of "Acadie" to the Sieur de Monts (French, 1603), the first charter of Virginia (English, 1606), and the charter of New England (1620). The first permanent settlement was made by the Pilgrims, a band of about 100 Englishmen, who landed at Plymouth in December, 1620, and founded the Plymouth Colony. In 1628 the Massachusetts Bay Colony established its first settlement in the vicinity of Salem. Relations with England became strained and in 1684 the charter of Massachusetts was declared forfeited. The Plymouth and Massachusetts Bay colonies and the District of Maine consolidated under a new charter in 1692. Measures of taxation devised by the home government upon the commerce of the colonists led to an increasing spirit of resistance on the part of the latter. The agitation culminated in the Revolutionary War. Massachusetts had been limited to practically its present boundaries by 1820 when Maine became a separate State. Massachusetts was one of the original thirteen states.

Places of Interest. Boston, the metropolis of the State, is a city replete with objects of historic interest. The Old Town House, built in 1658 and destroyed by fire in 1711, was succeeded by the present Old State House erected in 1713. Faneuil Hall was built in 742. The Old South Meeting House was erected in 1730 and contains many interesting relics. At King's Chapel Washington and his staff attended services in Revolutionary times. It was from Christ Church, built in 1723, that the lanterns were displayed in connection with Paul Revere's famous ride. Over in Charlestown stands Bunker Hill Monument. At Springfield is located the United States Armory, which annually turns out thousands of rifles for the United States armies. Oak Bluffs, on Martha's Vineyard, and Cottage Park, at Winthrop Centre on the North shore, are attractive summer resorts. At Siasconset, on Nantucket Island, is located an actors' colony.

CONNECTICUT

Area. The State of Connecticut is the third smallest in the Union. Its length is 75 miles, and its width 90 miles. The gross area totals 4,965 square miles, of which 145 square miles comprise the water surface.

Population.

Year	Population	Year	Population
1890	746,258	1910	1,114,756
1900	908,420	1920	1,380,631

Less than one-third the population reside in rural territory. In density of population, Connecticut ranks fourth among the states of the Union, with 286.4 persons per square mile.

Topography. Most of the surface of the State consists of rolling to mountainous highlands, which are interspersed with a great number of small valleys and bordered toward the coast line by a low rolling plateau. The eastern highland portion of the State is more gently rolling than the western highland, which near the New York state line assumes mountainous altitudes, rugged in outline. The principal highland portions of the State are separated by the Connecticut Basin, occupied in part by the Connecticut River, which flows across the eastern margin of this basin and through the eastern highlands to the sea. The basin itself is generally level, but is broken in places by mountainous ridges, comprising the southern extension of the Holyoke Range.

Climate. The climate is healthful and varied, cooled in summer by ocean winds, and sheltered in winter from cold north winds by the mountains and forests of Vermont and New York. These influences tend to make the extremes of cold and heat of less range than in the other New England States. The mean annual temperature is 49° Fahr., the average for winter being 27° and for the summer 72°.

Soils. Practically all the soils of the State of Connecticut are derived either directly or indirectly through the glaciation of the numerous varieties of underlying rock. The highland portions of the State have been generally swept bare of the finer soil-forming material at all of the higher altitudes and upon the more precipitous slopes. The lower slopes and the more gently rolling portions of the highlands are deeply covered with a complex glacial debris known as till. This results in stony, sandy loams and stony loams, with smaller areas of heavier loams. Within the Connecticut Basin and in all of the smaller valleys, there have been deposited gravels, sands, sandy loams, and clays.

These more level portions of the State constitute some of the best agricultural lands within its borders. Upon the sandy loams and loamy soils, tobacco cultivation, market gardening, and considerable fruit growing are carried on. The upland soils are principally used for grazing and the production of grass and corn. Extensive areas are too steep for any occupation other than that of forestry or pasturage. The advancing horticultural interests of the State are located chiefly upon the deeper areas of the glacial loams in the highland portion of the State.

Mineral Resources. The principal mineral products of Connecticut are from the quarries and the clay pits, and consist of granite and trap rock. It is the fifth State in the Union in the production of feldspar. Other commercial mineral products are infusorial earth, mineral waters, crystalline quartz, and clay products for the manufacture of bricks, tile, and pottery. Iron ore is also found.

Agriculture. Just as in the other New England States, the competition of the Western States and the increasing urban population have caused a decline in agriculture. In Connecticut, however, this has been offset in a measure by an increase in live stock and dairy values. This State was the first one in America to establish an agricultural experiment station as a separate institution, in 1875. The general character of the State's agriculture is indicated by the fact that only about one-tenth of the total value of crops is contributed by the cereals, while nearly one-third is contributed by hay and forage, over one-third by tobacco, about one-sixth by potatoes and other vegetables, the remainder consisting mostly of forest products, fruits and nuts, flowers and plants, and nursery products.

Large numbers of cows are raised for the increasing dairying industry. Pigs, thoroughbred horses, sheep, and mules are raised in considerable numbers.

An important agricultural school is the Connecticut Agricultural College at Storrs, whose work is supplemented by the experiment stations at Storrs and at New Haven.

Manufactures. The principal industry of Connecticut is manufacturing. The Civil War stimulated manufacture to such an extent that during the past fifty years Connecticut has attained very high rank in the *per capita* value of its products. This prominence is due to several causes, chief among which are the early establishment of a number of important industries in the State, and the unusually large amount of capital available for investment in manufacturing industries. Additional reasons are the abundant water supply, and the State's geographic location near New York City. The growth and condensation of the State's population have been closely related to the increase in the importance of the manufacturing industries.

The leading products of manufacture in the State are the textiles, which include cotton, woolen, silk, and knit goods. Of ammunition and firearms, Connecticut supplies a large part of the country's entire output. Other important industries are the manufacture of brass and bronze products, of which the State supplies about 30 per cent of the total output of the United States, and the production of hardware, corsets, clocks and watches, and plated ware, in all of which Connecticut ranks among the first in the Union. High rank is also maintained in the production of cutlery and tools, fur and felt hats, carpets, rugs, rubber goods, bicycles, and automobiles. The list is long and varied, and the value of the products gives Connecticut high rank among the states.

Transportation. The main line of the most important railway system in New England traverses Connecticut, giving direct and adequate connection with all parts of the country. Many of the manufacturing centers of Connecticut have direct water transportation facilities with New York City. The State is also well supplied with electric and interurban lines.

Defense. The National Guard of Connecticut includes 275 officers and 3,847 enlisted men. There is one brigade of infantry, an ambulance company, a hospital company, one regiment of field artillery, one of coast artillery, and one squadron of cavalry.

History. Connecticut is one of the thirteen original states. Its name is derived from the Connecticut River, as it was spelled by the Indians — Quinnitukut, meaning "long river." The English claimed the region by virtue of Cabot's discoveries in 1497 and 1498. In 1633 the Dutch of New Amsterdam built a trading post at what is now Hartford. Two years later the English under John Winthrop, Jr., built a fort at Saybrook to prevent the Dutch from getting control of the lower valley. In 1662 the colony of Connecticut obtained a charter from Charles II granting absolute autonomy. For many years the colony engaged in boundary disputes, the last of which was not settled before 1881. Connecticut took a prominent part in the War of Independence, and in October, 1776, was organized as an independent State. In 1788 Connecticut ratified the Federal Constitution. In 1786 the State ceded to the Federal Government its claims to western lands, which were based on the charter of 1662 defining Connecticut as extending from Narragansett Bay west to the Pacific Ocean.

Places of Interest. Connecticut has many places of historic interest. The Lebanon War Office Building was the headquarters of the Council of Safety during the entire period of the Revolution. In the City of Hartford is the Wadsworth elm tree, at which Washington alighted on his way to take command of the Continental Army. At New London is located the Nathan Hale schoolhouse, restored to its original condition. In this building Nathan Hale taught school for more than a year, before he left it to join the army at the time of the Lexington alarm. In Kensington stands the first monument erected in the country to the soldiers of the Civil War. New Haven is the seat of Yale University, one of the oldest and most renowned colleges in the country. It was founded in 1700 at Saybrook by Elihu Yale, and was moved to New Haven in 1716. Wesleyan University, at Middletown, was founded in 1831.

Among the numerous summer and health resorts are Litchfield and Washington.

NEW YORK

Area. New York ranks twenty-ninth in area among the states of the Union. The total area is 49,204 square miles, including 1,550 square miles of water surface.

Population.

Year	Population	Year	Population
1900	7,268,894	1920	10,385,227
1910	9,113,614		

New York, the largest city, includes more than half the population of the State. In 1790 the population of this city was 49,401. The lowest density of population is found in Hamilton County.

Topography. New York occupies a portion of the great plateau sloping northwest from the Appalachians. The eastern section of the State is crossed toward the south, by a continuation of the Appalachians. In the north lie the Adirondacks, an independent mountain mass. From near Lake Champlain east of the mountains, the Hudson River Valley slopes down to New York Harbor, where Long Island forms part of the Atlantic coastal plain.

The highest peak in the Adirondacks is Mount Marcy, which rises to 5,344 feet. These mountains are ancient, and the summits are rounded by weathering. They are forested to near the summit.

The plateau, occupying the greater part of the State to the west, descends to the Ontario Plain by a series of escarpments, the most notable at Niagara Falls. Toward the east, south of the Adirondacks the plateau becomes more and more rugged, culminating in the Catskills, the continuation in New York of the Appalachians. East of the Catskills is a continuation of the highlands of New Jersey, and at the Hudson, of the trap-rock ridges or Palisades of the triassic plain. The lowest area in the State is on Long Island.

Climate. The climate of New York is typical of northern United States. Extremes are great, and there is much variability caused by frequent hot and cold waves. The mean annual temperature ranges from 50° near New York City to 40° in the Adirondacks. The average annual rainfall is between forty and forty-five inches, decreasing toward the north.

Soils. The eastern portion of the State, together with the Adirondacks, consists chiefly of glaciated crystalline rock, the surface of which in many places on the greater altitudes and steeper slopes has been swept bare of soil. The valleys and gentler slopes are covered with stony loams, clays, and sandy loams of glacial origin. The soils of the uplands are principally stony loams and shale loams, with minor areas of clay loams or sandy loams. A small area in the southwest is unglaciated and is rough and deeply dissected. Along Lakes Ontario and Erie and the larger rivers are glacial lake deposits consisting principally of heavy clays, clay loams, sandy loams, and gravelly loams. On Long Island are sandy loams, well fitted for the production of vegetables.

Mineral Resources. More than thirty minerals are obtained in New York in sufficient quantities to be of commercial value. The greater part of the output is made up of clays, iron ore, sandstone, marble, limestone, cement ingredients, salt, petroleum, and sand and gravel. The clays are especially abundant, and along the Hudson is one of the greatest brick-making regions in the world.

Agriculture. In competition with the production of western states, New York has receded in the production of cereals, but considerable advance has been made in the production of hay and forage and in the dairy and fruit businesses.

The largest part of the farm acreage is devoted to hay and forage, which leads all crops in value. Next in importance are potatoes and other vegetables, cereals, fruits and nuts, grains and seeds other than cereals (principally dry edible beans), hops, tobacco, flowers, plants and nursery products, and small fruits. New York has a larger acreage in vegetables than any other state.

The leading cereals are oats, corn, wheat, buckwheat, rye, and barley. The value of the potato crop is several times greater than that of the corn crop, and exceeds the value of corn and wheat crops combined. In apple production, New York ranks very high, and peaches, grapes, plums, etc., are extensively grown, chiefly in western part of State.

The live-stock industry is an important branch of agriculture in New York, principally as the basis of the dairy produce. Besides milk cows, large numbers of sheep, cattle, horses, and swine are raised.

Forest Products. The forest lands are principally in the mountain regions. The most important timbers cut for commercial purposes are spruce, white pine, and hemlock.

Large areas have been denuded, but efforts at reforestation are meeting with success.

Manufactures. The predominating interest in New York is manufacturing, and in this respect the State has held first rank in the Union since 1825. About 15 per cent of the total population are engaged in manufacture.

Preëminent among the great industries is the manufacture of clothing. Census statistics show that the value of the total annual output of New York exceeds half the value of the total output of all the states. Next in importance come the printing and publishing business, textiles, foundry and machine-shop products, slaughtering and meat-packing, tobacco and its various products, lumber and timber products, flour mill and gristmill products, iron and steel, (steel works and rolling mills and blast furnaces), millinery and lace goods, electrical machinery, apparatus, and supplies, and a vast number and variety of other products, in many of which New York takes first place or ranks among the leading states of the Union.

Transportation. Transportation and communication facilities in New York are of the best. On the Jersey side of New York harbor are great terminals for most of the transcontinental lines of the country, with facilities for the transfer of goods to the eastern side. The mileage of electric lines is great, and canals used for shipping have a total length of 595 miles. The length of the Erie Canal alone is 341 miles. A system of canals connects Lake Ontario with the Erie Canal, and Lake Champlain with the Hudson and the St. Lawrence rivers.

New York City ranks first among the shipping ports of the world. The great port on Lake Erie is Buffalo, where goods are transferred by canal to Lake Ontario.

Defense. The National Guard includes the 27th Division and 1 brigade infantry, 1 brigade field artillery of the 44th Division, and 1 regiment and 3 troops cavalry, a machine gun squadron, 2 regiments field artillery, a signal battalion, 2 regiments coast artillery, 4 regiments of infantry, one colored; in all, 21,900 men.

History. New York Bay was first visited by Verrazano, a Florentine navigator in the service of France, in 1524, but it was not until 1609 that extended explorations were made within the region. Samuel de Champlain explored Lake Champlain from the north, and Henry Hudson sailed up the Hudson River from the south in the service of the Dutch East India Company. The Dutch established a trading post on Manhattan Island in 1613, and near Albany on the Hudson in 1614. In 1623, colonists settled at New Amsterdam and Albany.

In 1664 King Charles II granted the region comprising East New York, New Jersey, Vermont, and parts of Massachusetts, Connecticut, and Maine to the Duke of York. The Duke seized New Amsterdam, renaming the settlement New York. In 1673 the Dutch regained possession, but in the following year they were again subdued.

By various grants and concessions and the settlement of disputes as to boundary, New York was gradually reduced to its present limits. Before 1781 New York claimed lands in Ohio, but these were ceded to the Federal Government in that year. New York was one of the thirteen original states of the Union.

Places of Interest. The beautiful lake-studded Adirondacks and Catskills of New York are the favorite resort and outing place for thousands annually. Scattered in all parts of New York are beautiful scenes, interesting spots, and charming summer resorts: Niagara Falls, Bay Shore, Blue Mountain Lake, Cornwall, Germantown, Hempstead, Keene Valley, Oyster Bay, Patchogue on Long Island, Schroon Lake, and numberless others. Among the famous war scenes are Fort Ticonderoga, Stony Point, and White Plains. Noted mineral waters are found at Lebanon, Sharon, Hawthorne, and Ballston. The United States Military Academy is located at West Point, on the Hudson.

NEW YORK (2)

NATIONAL PARKS AND MONUMENTS

NATIONAL PARKS

Antietam Battle Field National Military Park was established in 1890 to commemorate the scene of one of the greatest battles of the Civil War. It is situated near Antietam in Washington County, **Maryland,** and is 40 acres in extent.

Bryce Canyon National Park, located in Garfield County, **Utah,** is one of the best exhibits of vivid coloring of the earth's materials which is known. It covers 22 square miles of canyon country, filled with a countless array of fantastically eroded pinnacles. Created in 1928.

Chickamauga and Chattanooga National Military Park was established in 1890. It is a beautiful natural park, embracing the battle fields of Chickamauga, Missionary Ridge, and other conflicts of the Civil War, fought in the vicinity of Chattanooga during 1863. The park, 6,543 acres in extent, is situated in **Georgia.**

Crater Lake National Park, with an area of 159,360 acres, is situated in the very heart of the Cascade Range in southern **Oregon.** It was set apart from the public domain and dedicated as a park in 1902. Crater Lake itself is a body of water, 6 miles in diameter, of an unbelievable blue color, which occupies the crater of an extinct volcano. Surrounding the area is a region of great scenic beauty, while the numerous evidences of intense volcanic action are of special interest to the geologist.

Fredericksburg and Spotsylvania National Military Park, marking the sites of the Battles of Fredericksburg, the Wilderness, Chancellorsville, and Salem Church, near Fredericksburg, **Virginia,** was set aside by the Government in 1927. The area is as yet (1929) undetermined.

General Grant National Park was set aside by the Government in 1890. Although only 2,536 acres in area, this national park contains a magnificent stand of big trees, including the famous General Grant Tree, a giant sequoia with a diameter of 35 feet. The beauty of the park and the interest of the drive thereto, together with its surroundings, make it an attraction that invites people from every state in the Union. It is located near Pinehurst, **California.**

Gettysburg National Military Park in **Pennsylvania** marks the scene of the Battle of Gettysburg, one of the bloodiest engagements of the Civil War. It is a beautiful natural park, and is probably better marked than any other battlefield in the world. Created in 1895 with an area of 2,530 acres.

Glacier National Park, in northwestern **Montana,** incloses 981,681 acres of the noblest mountain country in North America. The park was established by the Government in 1910 and its name was derived from the numerous glaciers within its boundaries.

To define Glacier National Park, picture to yourself two approaching chains of vast tumbled mountains, the Livingston and Lewis Ranges, which pass the Continental Divide back and forth between them in wormlike twistings, which bear living glaciers in every hollow of their loftiest convolutions, and which tower above innumerable lakes of unbelievable charm, offspring of the glaciers above. The rivers of icy water rush turbulently through sculptured gorges of indescribable beauty, while on the lower levels they are bordered by dense forests of spruce and pine.

Grand Canyon National Park, created in 1919, is situated in northern **Arizona.** Its 958 square miles (613,120 acres) inclose 56 miles of the Grand Canyon stretching west of its beginning at the mouth of the Marble Canyon. From rim to rim the canyon varies between 8 and 20 miles in width; it is more than a mile deep measured from the north rim, which averages nearly a thousand feet higher than the south rim. The eastern boundary embraces the lofty painted walls east of which lies the Painted Desert. Its western boundary includes the broad Cataract Canyon, tributary from the south, in whose depths we find the Huvasupai Indian Reservation and a group of fine waterfalls markedly different from any in our other national parks.

Grand Teton National Park, embracing the rugged Teton Mountains in **Wyoming,** was established in 1929. Area is about 135 square miles.

Guilford Courthouse National Military Park, an area of 131 acres, was established by the United States in 1917. It marks the site, near Greensboro, **North Carolina,** where one of the great battles of the Revolution was fought.

Hawaii National Park, in the Territory of **Hawaii,** was created in 1916. It is unique in that it consists of three separate tracts of land lying on two different islands. The Kilauea and Mauna Loa sections are located on the island of Hawaii, with the third section, Haleakala, on the island of Maui.

Each section of the park is named after the volcano that is its outstanding feature. The Hawaiian volcanoes are world famous and are known as the most continuous, various, and harmless active volcanoes on earth. Kilauea Crater has been almost continuously active, with a lake or lakes of molten lava, for a century. Mauna Loa is the largest active volcano in the world, with eruptions about once in a decade. Haleakala, a dormant volcano, is a mass 10,000 feet high, with a tremendous crater rift in its summit 5 miles across and 3,000 feet deep. In addition to these examples of volcanic action, the park is also noted for its luxuriant tropical forests. The total area is 118,695 acres.

Hot Springs National Park, situated about 50 miles southwest of Little Rock, **Arkansas,** is 911.63 acres in extent. It contains 46 hot springs, grouped about the base of Hot Spring Mountain, which have an aggregate flow of 851,308 gallons per day. Much of this water, which has great medicinal value, is piped to various bathhouses, and the revenue from this source are deposited in the United States Treasury.

The area was established by the Government in 1832 to preserve these health-giving waters in perpetuity, free from monopoly or commercial exploitation.

Lafayette National Park, the only Federal park east of the Mississippi River, is situated on Mount Desert Island on the coast of **Maine,** a region intimately associated with our colonial history. Surrounded by the sea, it occupies as its nucleus and central feature, the bold range of the Mount Desert Mountains. This beautiful park was created in 1919 and has an extent of 7,680 acres.

Lassen Volcanic National Park, situated in **California** at the southern end of the Cascades, was created in 1916 with an area of 79,440 acres. The outstanding features are Lassen Peak and Cinder Cone, volcanoes, which are considered among the best examples of recent volcanism. Both mountains, easily climbed and studied, are surrounded by fumaroles, hot springs, mud volcanoes, and other interesting phenomena of a volcanic region.

Lincoln's Birthplace, consisting of the Log Cabin and part of the farm where Abraham Lincoln was born, was donated to the Government in 1916 and established as a National Park. It is located at Hodgenville, **Kentucky.**

Mesa Verde National Park, an area of 48,966.4 acres near Mancos, **Colorado,** was established in 1906, to preserve America's most remarkable collection of cliff-dweller ruins and clay-brick pueblos. It was discovered in 1874 by a Government Exploration Party and has, since that time, held the intense interest of leading ethnologists.

Moores Creek National Military Park, **North Carolina,** covering 30 acres, was established in 1926, and marks the site of a memorable battle of the Revolution.

Mount McKinley National Park, situated in south central **Alaska,** contains the highest mountain in America,—Mount McKinley, whose altitude is 20,300 feet. The park, 1,692,800 acres in extent, was created in 1917, and is famous for the extraordinary grandeur of its scenery.

Mount Rainier National Park, near Tacoma, **Washington,** consists of a rectangular area of 207,782 acres, in which is situated Mount Rainier, the most beautiful mountain on the Pacific Coast. Cascading from the summit like arms of a giant starfish, radiate great glaciers which vie in magnitude and splendor with the most boasted ones of the Alps. This park was created in 1899.

Petersburg National Military Park, **Virginia,** marking the scene of the siege and defense of that city during the Civil War, was created in 1926. It covers 185 acres.

Platt National Park in Murray County, **Oklahoma,** which was established by the Government in 1902, is famous for its numerous springs whose waters contain valuable medicinal properties. It is 848.22 acres in extent.

Rocky Mountain National Park includes within its boundaries 241,739 acres of the Front Range of the Rockies in north central **Colorado.** Through the beautiful village of Estes Park easy access is had to the picturesque mountain country for which the park is famous. Created in 1915.

Sequoia National Park was created in 1890, to preserve the wonderful groves and forests of Big Trees for which **California** alone is famous. It is 386,560 acres in extent.

Shenandoah and Great Smoky Mountain National Parks are being established by the Government. The areas, situated in **Virginia** and **North Carolina,** and **Tennessee** respectively, embrace regions of beautiful Appalachian Mountain country.

Shiloh National Military Park in Hardin County, **Tennessee,** embraces the famous Civil War battlefield after which it is named. The area, consisting of 3,546 acres, was created in 1894.

Stones River National Military Park, **Tennessee,** marking the site of a famous battle of that name, was established in 1927.

Sullys Hill National Park, situated on the southern shore of Devils Lake, **North Dakota,** was created by the Government in 1904. The park, only 780 acres in extent, is noted for its scenic beauty and importance as a game preserve.

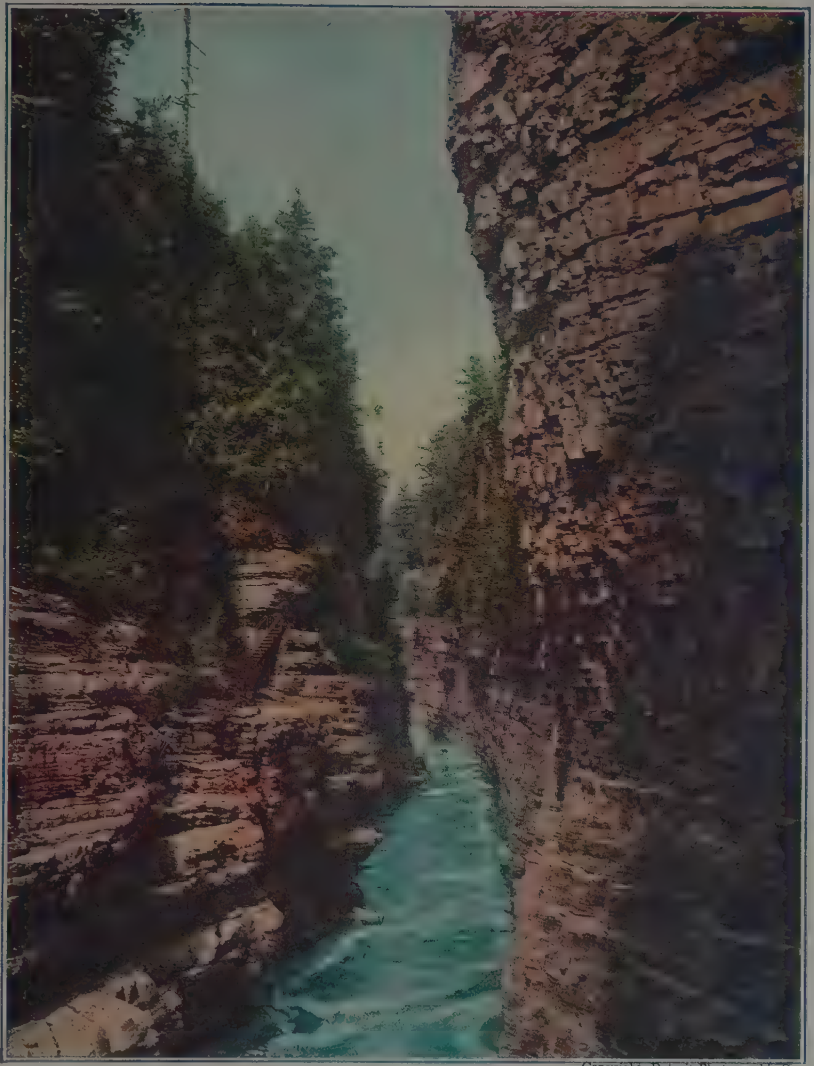
(Continued on page 108)

THE EAST'S ENCHANTED LAND

The remarkable beauty of the falls and rapids which abound in New York State alone would make it notable. Its crowning glory is, of course, Niagara, the American Fall lying entirely in the state, and one half of the Horseshoe or Canadian Fall likewise being within its boundaries. The Adirondack Mountain region contains a veritable multitude of rushing, tossing streams which leap, gurgling and bubbling, over every obstacle and obstruction, vastly contributing to the loveliness of the surroundings on every hand. Notable also are Trenton Falls, and the Falls of the Genesee and of Ticonderoga, while the renown of Enfield Falls near Ithaca is shadowed only by the glory of Taughannock, the highest fall in the state. Watkins Glen is famed at home and abroad for its marvelous beauty, and other glens in Seneca and Cayuga valleys are scarcely less worthy of tribute to their extraordinary natural charm.

One large lake which lies completely within the limits of New York is Lake George. The description "beautiful for situation, the joy of the whole earth" may well apply to it. Lake Champlain vies with Lake George in interesting scenery and shares in praise of its loveliness, but it is much greater in size and its waters extend into Vermont and even into Canada. The Finger Lakes derive their name from their peculiar elongated formation, and Chautauqua is well known and loved for its exquisite lake as well as for the Conference which takes hold on the spirit of man from another angle. The Hudson River, with its highlands and palisades, its West Point and its Sing Sing, well merits its world-wide renown.

The small but exceedingly rapid Au Sable River rises among the Adirondack Mountains, and in the lower part of its course falls seventy feet, entering a narrow but deep chasm two miles in length. Remarkable rock formations and picturesque scenery mark its course, particularly near a point where the stream contracts until its width is scarcely twelve feet. Stairways leading to the treetops on the cliffs make it a real Peter Pan scene.



AU SABLE CHASM, NEW YORK Copyright, Detroit Photographic Co

DELAWARE WATER GAP, PENNSYLVANIA Copyright, Detroit Photographic Co.

In Pennsylvania, to a height of 1,000 and even 1,500 feet, tower the encircling walls of the narrow gorge through which pass the waters of the Delaware. This river is navigable as far as Philadelphia for the giants of the ocean steamer service, and the scenery of the Delaware Water Gap, at all times remarkably beautiful, defies description in winter, when there is piled, often twenty feet high, the most fantastic and titanic formations of ice. The sea has gained access to the lower portion of the Delaware River because of a depression of the land, and there is formed a fine harbor at whose head lies the Quaker City. The zigzagging Susquehanna also is notable for the scenery of its gorges, many of which form railway passages.

RHODE ISLAND

Area. Rhode Island is the smallest State in the Union. The gross area is 1,248 square miles, of which 181 square miles are water surface.

Population.

Year	Population	Year	Population
1860	174,620	1900	428,556
1870	217,353	1910	542,610
1880	276,531	1920	604,397
1890	345,506		

Rhode Island is first in density of population among the states of the Union, averaging 566.4 persons per square mile. Practically all of the inhabitants live in urban territory, over 97 per cent of the total being enumerated in cities and towns with a population of over twenty-five hundred.

In no other state is so great a proportion of the population found in the cities.

The absolute increase in population in the State has been steady and substantial since 1860. There was some fluctuation before that year, but never any absolute loss. A very considerable percentage of the population is foreign-born, principally French-Canadians, Irish, English, and Italians.

Topography. Rhode Island may be divided topographically into three natural divisions, Narragansett basin, the glaciated highlands, and Block Island some distance southward off the coast. The Narragansett basin is a gently rolling, glaciated plain from which rise low rounded hills. The coast is much broken by large irregular inlets and bays with shallow depths. Nowhere is the plain more than three miles wide.

Inland rise the glaciated highlands consisting of rough, stony hills broken with river beds. Glaciation has turned the courses of the rivers, causing waterfalls and forming numerous lakes, many of them swampy with vegetable accumulation.

Block Island is a low sandy tract with a rolling surface.

Climate. The climate of Rhode Island is of little variation throughout the State. Everywhere the climate is mild and the range in temperature small. The mildness of the climate, in particular immediately on the sea coast, has contributed considerably to the popularity of Narragansett Pier and Newport as summer resorts. At Narragansett Pier the mean annual temperature is 49° Fahr., 68° for the summer and 29° for the winter.

The mean annual rainfall is 50 inches.

Soils. Bowlder clay and glacial drift cover most of the surface, making the land of little agricultural value. In the Narragansett basin are silty and fine sandy and gravelly loams. In the uplands the rivers are generally without alluvial bottoms, and the lakes are surrounded by coarse sand, or sandy and stony soil.

Mineral Resources. The mineral resources of Rhode Island are inconsiderable. Iron ore was once mined in the State, but the supply was soon exhausted. During the Revolution, cannon were manufactured for the revolutionists from this iron. The leading mineral resources of the State are now building stone, clay products, lime, and mineral waters.

Agriculture. The nature of the soil and the small area of Rhode Island have made the agricultural products of comparatively small amount and value. The total acreage in farms is slowly decreasing, improved farmland decreasing more rapidly than total acreage.

The crops are hay and forage, cereals, potatoes, grains (other than cereals) and seeds, tobacco, and vegetables. Hay is the leading product, and the acreage devoted to it is more than five times as great as that devoted to the cereals.

Corn is the leading cereal. Other grains are oats, rye, barley, and wheat. Vegetables, flowers and plants, and potatoes are important products, the potato crop exceeding in value that of cereals. Of the small fruits, the strawberry leads in value, and of the orchard fruits, apples, pears, and peaches are first in value.

Fisheries. Deep-sea fishing has long been an important pursuit in Rhode Island. During the early days of the colony and until 1800, whaling was carried on extensively by the inhabitants.

The important catches at the present time are lobsters, mackerel, herring, bluefish, scup, and oysters.

Manufactures. Rhode Island is preëminently a manufacturing state, holding high rank among the leading states in the production of textiles. The first cotton-spinning device in the United States was established at Providence in 1786, and contained twenty-eight spindles. Now there are about 2,798,000 spindles in operation in the State. The cotton used was first imported from Spain. The first printed calico made in the United States was produced at East Greenwich in 1794. In 1790 the Arkwright spinning machine was introduced at Pawtucket, and the first power loom for cotton manufacture was operated at North Providence in 1817.

Woolen and worsted goods form the greater part of the textile products. Next in order come cotton goods, including cotton small wares, silk and silk goods, and hosiery and knit goods. The products of the textile industries represent about half the value of manufactured products in the State.

Jewelry, including silver ware and plate ware, gold and silver reducing and refining, is the next great industry. Rhode Island takes a leading place in the Union in the manufacture of jewelry. The industry was first established in 1784, and was greatly promoted by the invention of gold filling in 1794.

Other manufactures are important and varied, though common to all large manufacturing states.

In 1923, 1,691 establishments, employing 134,667 wage-earners, put out products with total value of $675,581,000.

The important industrial centers are Providence, Pawtucket, Woonsocket, Warwick, Cumberland, East Providence, Cranston, Central Falls, and Newport.

Transportation. The main line of the New York, New Haven and Hartford Railroad, the most important railway system in New England, gives the State direct and adequate connection with all parts of the country. There are 209 miles of steam railway, and nearly twice as many miles of electric road in the State.

Many vessels dock at Providence, Newport, and Bristol, but the shallow depth of water in the harbors is a great hindrance to ocean traffic.

Defense. The Rhode Island National Guard includes a regiment of field artillery, one ambulance company, a hospital company, one regiment of coast artillery, a signal company, and one squadron of cavalry, 1,361 men in all.

History. The first recorded visit to Narragansett Bay was made in 1524 by Verrazano. In 1614 the Dutch navigator, Adrian Block, explored the bay; and in 1636 the first settlement in the State was made at Providence by Roger Williams and others, refugees from the colony of Massachusetts Bay, driven out because of their refusal to accept the prevailing religious beliefs. Later settlements were made at Portsmouth in 1638, at Newport in 1639, and at Warwick in 1643. These four settlements were consolidated in 1647 under a patent for the "incorporation of Providence Plantation in the Narragansett Bay in New England." Some differences in sentiment caused a division, but in 1663 Roger Williams succeeded in bringing about a union under a charter from Charles II. Under this charter the colony and State were governed until 1842.

The settlements of Rhode Island were characterized by strong political individualism. Afraid that the establishment of a strong federal government would interfere with local privileges, it was with much reluctance that the State finally ratified the Federal Constitution, May 29, 1790.

After much controversy a new charter was adopted in 1842. A peculiar characteristic of this constitution is the apportionment of state senators. Each town or city is allowed but one senator, without regard to population. By this arrangement the four largest towns containing a total of 376,000 inhabitants are represented by four senators, while the rest of the State with a total of only 229,000 inhabitants has thirty-five senators.

The boundaries with Connecticut and Massachusetts were not definitely established until 1887.

Places of Interest. Among the noted resorts are the famous Newport district, Jamestown, Portsmouth, Narragansett Pier, and Watch Hill.

Providence contains many spots made interesting by their connection with early colonial history.

NEW JERSEY

Area. The gross area of New Jersey is 8,224 square miles, including 710 square miles of water surface. The State is one of the smaller states in the Union, ranking forty-fifth in size.

Population.

Year	Population	Year	Population
1860	672,035	1900	1,883,669
1870	906,096	1910	2,537,167
1880	1,131,116	1920	3,155,900
1890	1,444,933		

Density of population in the State in 1920 averaged 420 persons per square mile, ranking third in the Union in this respect. Hudson County, containing Jersey City, showed the highest rate of population per square mile, and Ocean County the lowest. The total urban population far exceeds the rural.

Topography. The southern half of the State is a Coastal Plain rising from sea-level to an altitude of 200 feet. Almost three-fourths of this area is less than 100 feet above sea-level, and one-third is below fifty feet. An area of only about 15 square miles reaches an altitude of 200 feet. Delaware Bay and the lower Delaware River are bordered by broad stretches of marine terraces rising from 10 to 80 feet above tide level. Along the seashore are large tidal marshes. Succeeding the great coastal plain to the northwest lies a belt of triassic lowlands. The surface is broken by a series of trap-rock ridges, which, stretching in a northeast, southwest direction, reach the Hudson, where they form the Palisades. Farther inland the most conspicuous of the ridges are called the Watching Mountains. This region is followed by an upland plateau averaging 1,000 feet in altitude, parallel with the Kittatinny Valley and with the Kittatinny Mountain Range beyond, which at High Point attains 1,805 feet. The Kittatinny Valley is a broad undulating region.

Climate. The mean annual temperature of New Jersey ranges from 49.2° Fahr. in the north, to 55.4° in the south. In the high altitudes of the north the seasons show great variation in temperature. Of particular importance for New Jersey is the moderating influence of the sea in summer and winter. This condition, combined with the great extent of excellent beaches along the coast, has brought about the development of numerous and highly popular summer resorts.

The normal annual precipitation ranges from about 42 inches along the sea to 49 inches in the highlands.

Soils. The soils of the Coastal Plain are sands or sandy loams with some areas of extremely plastic clay, and enriched in places by deposits of marl. There are numerous areas of swamp land and tide marsh along the rivers and the sea. The soils of the triassic regions are loams and clays of a deep red color derived from the underlying triassic sandstone. The soils of the highlands are the result of glaciation of shales, limestone, and trap rock.

Mineral Resources. The highland regions in the northern part of the State are rich in mineral resources. The State is second in the Union in the production of fire clay and zinc ores. The section also produces large quantities of granite, roofing slate, flagstone and limestone, and infusorial earth. Sandstone is quarried in the triassic plains, and clays, feldspar, and fertilizers are produced in the marl belt. The lowlands yield glass sands of the finest quality. New Jersey also produces large quantities of the ingredients necessary to the manufacture of Portland cement.

Agriculture. The less sandy soils of New Jersey, particularly the sandy loams, are intensively cultivated, and the chief products are potatoes and other vegetables, sweet potatoes, cereals, hay, and fruits. The heavier silt loams and clay soils yield large crops of corn, wheat, oats, and grass. Peaches thrive on some of the sandy loams.

Of the total land area of the State, 47.5 per cent is in farms. New Jersey is receding in the amount of farm acreage. Although there was an increase of 24.4 per cent in population from 1910 to 1920, the total farm acreage decreased by 11.3 per cent.

Vegetables lead the crops in value. Cereals include corn, wheat, oats, rye, buckwheat, barley, kafir corn and milo maize, and mixed oats and peas. The general character of the agricultural product of New Jersey, however, is indicated by the fact that more than 46 per cent of the total value of the crops in 1919 was contributed by potatoes and other vegetables, 23 per cent by the cereals, and less than one-sixth by hay and forage. From year to year, cereals are decreasing, and dairy products and the fruit and market-gardening branches are growing.

Fisheries. Deep-sea fishing is carried on extensively. The principal catches are oysters, clams, trout, sea-bass, cod, bluefish. The Delaware River has been stocked with black bass by the United States Fish Commission.

Manufactures. New Jersey is preëminently a manufacturing State, and ranks high in the Union in the gross value of manufactured products. This industrial importance is due to a great extent to exceptionally favorable geographic location, to the excellent transportation facilities, and the close proximity of the great coal fields of Pennsylvania and the great trading centers, New York and Philadelphia. The leading manufactured products of the State are refined petroleum, silk and woolen goods, and foundry and machine-shop products. The higher-grade silk goods are a specialty, and New Jersey is among the first textile-producing states in the Union. Other valuable and important manufacturing industries are slaughtering and meat-packing, wire works, leather, electrical machinery and supplies, chemicals, jewelry, rubber goods, soap, pottery, terra-cotta and fire-clay products, paint and varnish, oilcloth and linoleum. The State leads in production of sanitary ware.

The great manufacturing cities, whose products go to all parts of the world, are Newark, Jersey City, Bayonne, Perth Amboy, Paterson, Camden, Trenton, Passaic, Elizabeth, and Hoboken.

Transportation. Facilities for transportation and communication are highly developed. All the great manufacturing centers are either located on New York Harbor or are connected directly with it by rail. The State is crossed by all lines entering New York from the south and west, and by those entering Philadelphia from the north and east. Many of the New York terminals are located in New Jersey. Numerous lines cross the State, connecting the resorts along the coast with the great centers of population. They are supplemented by an extensive network of electric lines.

The abundance of trap rock has resulted in excellent wagon roads. The great Lincoln Highway passes from Jersey City southwest to Philadelphia, running through or near Newark, Trenton, and Camden, a distance of 106 miles.

Rivers are navigable to a great extent. On the Delaware River, ocean steamships navigate as far as Camden. Jersey City and Hoboken are great ocean steamship terminals.

Defense. The National Guard consists of a brigade of infantry, a regiment of field artillery, one of cavalry, one of engineers and a medical regiment, a motor transport company and the 44th Division Air Service, a total of 4,617 men.

History. The first authenticated visit by Europeans was made by Giovanni da Verrazano, a Florentine navigator, in 1524. In 1609, Henry Hudson explored the region between Sandy Hook and Raritan Bay; and five years later, Dutch settlers began to arrive along the Hudson in Bergen County. In 1614 Cornelis Jacobson Mey explored the lower Delaware. The first permanent settlement was made in 1623 at Fort Nassau near Gloucester City, and Hobocon-hackingh was established at an early date on the site of Hoboken. Swedes settled near modern Wilmington in 1638, but this settlement passed under Dutch control in 1655. When Carteret and Lord Berkeley received the region from the Duke of York in 1664, they granted the territory a government by popular assembly. Prior to the Revolution it was under the jurisdiction of the Royal Governor of New York. In 1776, on the outbreak of hostilities with England, the colony deposed the governor and ratified the national Declaration of Independence. In the State were fought some of the most important engagements of the war. In 1787 the State accepted the Constitution, and became one of the original thirteen states of the Union.

Places of Interest. Among the famous seaside resorts are Asbury Park, Atlantic City, with its renowned board walk and pier, Cape May City, Long Branch, and Ocean Grove. New Jersey is filled with pleasure and health resorts attracting thousands from the great cities near by. There are also many historic towns and places noted as the scene of battle or historic event, such as Princeton, Trenton, and Elberon.

PENNSYLVANIA

Area. The area of Pennsylvania totals 45,126 square miles, of which 294 square miles are water surface. The State ranks thirty-second in size in the Union.

Population.

Year	Population	Year	Population
1850	2,311,786	1890	5,258,113
1860	2,906,215	1900	6,302,115
1870	3,521,951	1910	7,665,111
1880	4,282,891	1920	8,720,017

Pennsylvania ranks second in population in the Union, following New York. The greatest density of population in the State is found in Philadelphia County, co-extensive with Philadelphia, and the lowest in Pike County. The proportion of urban to rural population is 64.3 to 35.7, and fast increasing.

Topography. There is considerable diversity in the surface features. In the southeast the Piedmont belt crosses the State, succeeded to the northwest by a broad stretch of limestone valleys, and beyond that the whole Appalachian mountain system running in a general northeast-southwest direction. Northwest of the mountains lies the Appalachian Plateau, succeeded by a small area of lake plains at Lake Erie. The mountain region is composed of a large number of parallel ridges and intervening valleys which are broken by longitudinal ranges of hills. The ridges are remarkably uniform in height, running in almost unbroken lines from 500 to 1,000 feet above the valley floors. The whole State rises from less than twenty feet at the Delaware to over 3,000 feet in the mountains, and descends again to about 250 feet at Lake Erie. The plateau, considerably broken in the east, becomes rolling to undulating toward the west and slopes gradually to the Ohio and the southwest. Toward Lake Erie the descent is by declivities, and the drop to the Lake Erie plain is sudden. The Lake Erie shore is lined with a high wall of sand and clay, with a narrow beach at its base.

Climate. In the southeast the climate is mild and equable, being much affected by the nearness of the ocean. In the mountainous region the valleys are hot in summer and severely cold in winter; the extremes become less as Lake Erie is approached.

The mean annual temperature ranges from 52° Fahr. in the southeast to 47° in the northeast and 49° at Lake Erie. The average annual precipitation ranges from 41.2 inches at Philadelphia to 36.4 inches at Pittsburgh.

Soils. In the southeast the principal soils are clays, silt loams, and clayey and sandy loams derived from underlying crystalline rocks. North and west of this area is a belt of clays, clay loam, and shale loam formed by the weathering of red triassic sandstones, and shales. In the limestone valleys the soils are loams and silt loams. In the Appalachians are mostly stony loams, silt loams, sandy loams, and some clay soils. West of the Appalachians these same soils prevail, formed by the weathering of sandstones, shales, and limestones. The glaciated region in the northwest and northeast is covered mostly with stony and shaly loams and silt loams, with areas of clay. On the Erie plain are clay loams, sandy loams, and gravelly loams deposited in the bed of the former glacial lake.

Mineral Resources. Pennsylvania is the greatest coal-producing State in the Union, and one of the greatest in the world. With the exception of some small areas in New Mexico and Colorado, Pennsylvania contains the only anthracite coal deposits in the country. The production in tons runs up close to the hundred million mark annually. The fields are in the eastern part of the State and cover some 480 square miles. The bituminous coal field covers 14,200 square miles. Pennsylvania is one of the foremost states in the production of oil, and the production of gas is in excess of all other states. Iron ore resources are not extensive, but vast quantities from the Lake Superior district are brought into the State to be converted into pig iron.

Large quantities of building stone are quarried, chiefly dolomites, sandstone, and bluestone. State ranks first in slate. Other products are cement, limestone, fire-clay, glass-sand, crystalline graphite, feldspar, soapstone, and garnet.

Agriculture. The diversity of soils produces a diversity of crops in the various parts of the State. Of the total value of crops, cereals contribute more than 37 per cent, hay almost one quarter, and the remainder is made up by potatoes, vegetables, fruits, nuts, and tobacco.

The western part of the plateau is largely devoted to stock raising, and this industry, especially milk cows, sheep, and swine, is rapidly increasing. The glacial lake area is being rapidly developed for grapes, apples, peaches, and other fruits. The southeast region is chiefly devoted to the raising of cereals and forage. In the mountains, only the valleys and the more gentle slopes are suited to agriculture; and in the higher plateau region, only the level areas and the river bottoms.

Forests. In 1860, State led in lumber output, but in 1924 ranked twenty-second. About 12 million acres of forest are left, with stand of 11 billion feet of saw timber, 70 per cent oak, chestnut, and other northern hardwoods, 30 per cent softwoods, half hemlock

Manufactures. Pennsylvania has been second only to New York in the value of its manufactures since 1859. Pig iron and steel, of which the State produces 35 and 40 per cent of the country's output respectively, are the leading products. The State is first in the production of leather goods, coke, and glass; second in wool and silk goods; leads the Middle States in cotton manufacturing, and stands among the first in hosiery, knit goods, and carpets. Other important manufactures include foundry products, machinery, cars, cement, refined oil, tobacco products, and electrical equipment The great manufacturing cities are Philadelphia, Pittsburgh, Reading, Johnstown, McKeesport, New Castle, South Bethlehem, Scranton, Allentown, Erie, Harrisburg, Chester, York, Altoona, and Lancaster In Philadelphia alone are employed about 25 per cent of all the wage-earners of the State

Transportation. Some of the main lines of the most important railway systems in the United States traverse Pennsylvania. The greatest system is the Pennsylvania Railroad, maintaining numerous lines in the State; others are the Philadelphia and Reading, the Lehigh Valley, the Erie Railroad, the Delaware, Lackawanna and Western, and the Baltimore and Ohio.

At Erie is one of the best harbors on the Great Lakes. Philadelphia is a great port for ocean traffic, and Pittsburgh is excellently served with river transportation.

The great Lincoln Highway extends across the lower part of the State from Philadelphia, through or near the cities of Lancaster, York, Gettysburg, Chambersburg, Bedford, Ligonier, Greensburg, Pittsburgh, and Beaver Falls, to Canton, Ohio, a total distance from Philadelphia to Canton of 433.2 miles.

Defense. The National Guard consists of the entire 28th Division and two regiments of field artillery, one of anti-aircraft artillery, a brigade of cavalry and a battalion of mounted engineers, 11,695 men

History. Pennsylvania was named in honor of William Penn, who was the real founder of the State. The first settlement was made by Swedes in 1643, near the present site of Philadelphia. In 1655 Swedish authority was overthrown by the Dutch; and Dutch authority in turn yielded to the Duke of York with the capture of New Netherland in 1664.

In 1681 William Penn received in grant from Charles II most of the region now included in Pennsylvania and Delaware, and settlement was thereafter very rapid. In 1760, the present boundary with Maryland was determined; in 1779, the boundary with Virginia was fixed at the afterwards famous Mason and Dixon's Line; and in 1789 the New York boundary. The Erie shore was bought from the Federal Government in 1792.

Pennsylvania was one of the original thirteen states of the Union; and some important engagements of the Revolution were fought within its boundaries: Brandywine, Paolo, Fort Mifflin, and Germantown. The State furnished 336,000 men for the Union during the Civil War. During the war, Chambersburg was burned, and the battle of Gettysburg was fought on Pennsylvania soil.

Places of Interest. Pennsylvania abounds in historic places, among them Germantown, Gettysburg, Kingston, where an Indian massacre occurred in 1778, and Wilkes-Barre. Among the favorite resorts are Shawanese with its beautiful lake, Renovo, Mauch Chunk, Cresson Springs, and picturesque Eagles Mere. Curative mineral waters are found at Gettysburg and Bedford.

MARYLAND

Area. The outline of Maryland is extremely irregular. Only seven states of the Union are smaller. It has an area of 12,327 square miles, including 2,386 square miles of water surface.

Population.

Year	Population	Year	Population
1890	1,042,390	1910	1,295,346
1900	1,188,044	1920	1,449,661

In 1920, when the last census was taken, the population was a little less than five times as large as in 1790. The urban territory contains three-fifths of the population, about 734,000 living in Baltimore.

Topography. Maryland has great diversity of surface. All that portion east of Chesapeake Bay is known as the Eastern Shore, and that part immediately west of the bay is known as the Western Shore. Both portions lie in the Coastal Plain region, which includes three-fifths of the entire State, and together are commonly known as Tidewater Maryland. A "fall line" extending from Washington, D. C., northeast through Baltimore to a point a little south of the northeast corner of the State, marks the edge of the Piedmont Plateau. The East Shore is a low, level plain, the least elevated section of the State. A water-parting extending from northeast to southwest close to the Atlantic border divides the East Shore into two drainage systems.

The West Shore is more undulating and elevated than the East. The "fall line" is a zone in which a descent of about 100 feet or more is made in many places within a few miles, and in consequence it is marked by waterfalls, cascades, and rapids. That part of Maryland within the Piedmont Plateau extends west from the "fall line" to the base of the Catoctin Mountains, on the west border of Frederick County, and has an area of about 2,500 square miles. In the extreme western part of the State the high ranges of the Alleghenies merge into the Appalachian Plateau, reaching an altitude of 3,400 feet.

Climate. The climate of Maryland is varied, being influenced by ocean, bay, and mountains. Most of the State enjoys the healthfulness common to the western part of the United States. In the eastern and southern portion the winters are mild and the summers are hot, while in the western and more elevated parts the winters are quite cold and the summers cool. The mean annual temperature for the entire State is between 53° and 54°.

The normal annual precipitation for the State is about forty-three inches.

Soils. A great variety of soils characterize the land of Maryland. In the upland portion of the southern counties on the East Shore, sandy loams are prevalent, which are adapted to general farm crops, vegetables, and tree fruits. Just north of these soils and bordering the Piedmont Region are extensive areas of plastic clay, interspersed with coarse sand, adapted only for special crops. The level or slightly rolling clays, loams, and silt loams of the northern counties are better drained, and especially adapted to cereals, grasses, fruits, and vegetables. From the "fall line" west to the foot of the Appalachians lies the hilly, well drained Piedmont Plateau region, with soils ranging from soft loams to heavy clays, particularly adapted to grass, wheat, corn, and tomatoes. Alluvial loams occupy the narrow river valleys. The most common soil, however, is that formed from gneiss, with a large percentage of clay in the subsoil. In the east portion of the mountainous region, the soil so well adapted to peach culture contains much clay, together with particles of Cambrian sandstone. The Allegheny ridges have only a thin, stony soil, but good limestone, sandstone, shale, and alluvial soils occur in the valleys and in some of the plateaus of the extreme west.

Mineral Resources. Coal is the most valuable mineral of the State. It is of two varieties, bituminous and semi-bituminous. Nearly all of the high-grade blacksmithing coal mined in the United States comes from Maryland. The coal deposits are confined to western Allegany and Garrett counties and are a part of the great Appalachian coal field which extends from Pennsylvania southward into West Virginia. The Maryland building stone, of which there is an abundance, and of good quality, consists chiefly of granites, limestones, slate, marble, and sandstones. Brick, potter's and tile clays are found most extensively along the west border of the Coastal Plain, and fire clay in West Maryland. Materials for porcelain abound in the east portion of the Piedmont, and materials for mineral paint in Anne Arundel and Prince Georges counties.

Agriculture. Various kinds of grain, vegetables, and fruit are produced from the many different soils of the State. About 50 per cent of the land area is improved for cultivation. The eastern part of the State is used for the production of fruits and vegetables, the western part for the raising of cereals. While the leading agricultural pursuits are the growing of Indian corn and wheat and the raising of live stock, it is in the production of fruits, vegetables, and tobacco that Maryland also ranks high as an agricultural State. The Indian corn, wheat, and live stock sections are in the Piedmont Plateau, the Hagerstown Valley, and the central portion of the East Shore. Most of the tobacco is grown in the south counties of the West Shore. The great center for vegetables and small fruits is in the counties bordering on the northwest shore of the Chesapeake. Peaches and pears grow in large quantities on the East Shore. Apples grow in abundance in all parts of the Piedmont Plateau.

Fisheries. The fisheries of Maryland are of considerable importance, especially the oyster fisheries, which yield more than in any other State except Virginia. Other catches are shad, bass, perch, and shellfish other than oysters.

Manufactures. Manufacturing plays an important part in the industry of the State. The production of clothing is the most important branch. Copper, tin, and sheet-iron products, chiefly stamped and enameled ware, are put out in enormous quantities. Copper smelting and refining is one of the important industries. Baltimore is famed as a great center for the canning of oysters and the packing and preserving of vegetables and fruits. Other manufactures of importance are shipbuilding, foundry and machine-shop products, including stoves and furnaces, tobacco manufacture, flour and grist mill products, and fertilizers. Slaughtering and meat-packing and petroleum refining are also extensively carried on.

Transportation. There are 1,481 miles of steam roads and 758 miles of electric roads in the State, which furnish adequate transportation by land. Unusual facilities for water transportation are afforded by Chesapeake Bay, with its numerous deep inlets and navigable tributaries, together with the Chesapeake and Delaware Canal, which crosses the State of Delaware and connects the Chesapeake with the waters of Delaware River and Bay.

Defense. Maryland's National Guard included 3,142 men on November 30, 1925, organized as a brigade of infantry, a regiment of field artillery, one company of colored infantry, a hospital company, and a collecting company.

History. Maryland was named in honor of Henrietta Maria, queen consort of Charles I of England. The first white man to explore the region was Capt. John Smith, who sailed up Chesapeake Bay in 1608. In 1632 a charter was granted by Charles I to Cecilius Calvert, second Lord Baltimore; and on March 27, 1634, a settlement was established at St. Mary's. In 1638 the right to initiate legislation, which until then had been claimed by Lord Baltimore, was conceded to the people. In 1649 the assembly passed the famous Act of Toleration. In 1652 the colony was seized by the commissioners of Parliament, but it was restored to Lord Baltimore in 1657. In 1689 an association of Protestants, under the leadership of John Coode, seized St. Mary's and assumed control of the government in the name of William and Mary of England. In 1694 the capital was removed from St. Mary's to Annapolis. In 1715 the Province was restored to the fifth Lord Baltimore. A bill of rights and a constitution were adopted in November, 1776, and the first legislature assembled in Annapolis on February 5, 1777. The Federal Constitution was adopted in the Maryland convention on April 28, 1788. Maryland was one of the original thirteen states.

Places of Interest. Baltimore, the principal city of Maryland, is situated on the Patapsco River, and was founded in 1730. It was the first city in America to erect a worthy Washington monument. The Federal District, not a part of Maryland, lies on the Maryland side of the Potomac. Washington is filled with countless objects of interest, buildings, statues, and historic scenes. At Annapolis, the capital of the State, Washington resigned his commission to Congress on December 23, 1783. Here is located the United States Naval Academy.

DELAWARE

Area. Delaware is the second smallest State in the Union, Rhode Island ranking first in that respect. It is 110 miles long, and from 9 to 35 miles wide, with a total area of 2,370 square miles. The area of the water surface is 405 square miles.

Population.

Year	Population	Year	Population
1900	184,735	1920	223,003
1910	202,322		

Over 54 per cent of the population of the State reside in cities and towns having more than 2,500 inhabitants, and over nine-tenths of this urban population reside in Wilmington. About 87 per cent of the people are white, of whom about nine-tenths are native-born. The percentage of Negroes is decreasing.

Topography. Delaware is the farthest north of the South Atlantic States, and is a nearly level coastal plain averaging less than fifty feet above the sea. The extreme northern part of the State is occupied by the Piedmont district, a hilly country lying between the mountains and the Atlantic Plain. A line drawn from a point on the western boundary about two miles south of Newark in a northeasterly direction, would strike the city of Wilmington, and would mark the boundary of the hilly country. To the north of this line the district is rolling, and at some places rises to a comparatively high elevation. South of this line the hills end abruptly. The hills and valleys have numerous cultivated lands occupied by farms.

The southern part of the State is a great plain. Generally the rivers have very crooked courses, but for some distance back from their mouths they furnish deep water for navigation and give excellent facilities for transportation and travel. They also furnish excellent water-power for industry. A great cypress swamp occupies a portion of the southern part of the State. Beneath its surface are buried large trees, which have probably been lying there for thousands of years. These are brought to the surface and converted into shingles. The swamp is being drained, and the waste lands transformed into a fertile farming region.

Climate. Green fields and fruitful orchards testify to the genial climate of Delaware. The summers, with an average temperature of 85° in August, are as warm as those of France. For January the average temperature is 25°. The end of April sees the last of the spring frosts, and from that time until the middle of October the crops are in no danger of freezing. Thunderstorms and heavy rains come with summer, but cause no great damage. With an abundance of rainfall, there is little danger of lack of water for the crops, or of parching droughts. The prevailing summer winds are from the northwest; those in winter, from the southwest.

The mildness of Delaware climate is induced by the proximity of the Delaware and Chesapeake bays. The extremes of heat and cold at Wilmington are 93° in summer and 1° in winter. The mean annual temperature is 53°.

The annual rainfall is slightly over 40 inches.

Soils. The soil is richest in the northern portion of the State, consisting of clays mixed with loams, and thinning to sand in the south. It is capable of yielding an abundance of grain, vegetables, and fruit. The more valuable farm lands are in the north.

Mineral Resources. The only mineral products of any importance are granite and clay, taken from the quarries and pits near Wilmington. In the upper part of Newcastle County are large beds of kaolin, a fine clay from which porcelain is made. Feldspar, another useful stone found here, is an important product, and is also used in the making of porcelain. It is ground to a powder in the mills, sent to the potteries, and used in glazing dish ware. Serpentine is another stone used for architectural and decorative purposes. It is generally mottled green in color. Bog iron is found in several parts of the State.

Agriculture. Although a considerable portion of the population resides in a manufacturing center, Delaware is distinctly an agricultural State, farms occupying about 75.1 per cent of the total land area. The State is a great market garden and orchard for the large cities of the neighborhood. The north is the region of cereals, potatoes, and hay. The upper or hilly portion contains rich lands which furnish excellent grazing for cattle. In the center and south are found fruits, berries, and vegetables. Fruit is one of the most important products of Delaware, and enormous quantities of peaches, apples, plums, and strawberries are annually grown. Blackberries and raspberries are also extensively cultivated. The annual fruit crop is worth over $2,500,000.

Delaware ranks very high in quantity of tomatoes packed. About 23,000 acres are devoted to their culture.

Forests. The forests, which were once extensive, have been almost entirely depleted. The few timbers now standing are of no commercial value.

Fisheries. Delaware has important oyster and other fisheries, which are of increasing importance.

Manufactures. The greater part of manufacturing in the State is carried on at Wilmington, which contains nearly half the total population. While not preëminently a manufacturing State, there are many natural advantages in that direction. Water-power for numerous mills in the northern part is furnished by small, swift-running streams rising among the hills of the Piedmont region. Another source of power is the fuel from the adjacent coal fields of Pennsylvania. The leading manufacture is a fine morocco leather, made from goat skins. Second in importance are pulp and paper goods, and third the building of steam railroad cars. The manufacturing industry is largely concentrated in Wilmington and New Castle, the only incorporated cities. Other industries are steel and iron works, canning and preserving establishments, foundries and machine shops, shipbuilding yards, flour and grist mills, and powder mills. Factories have lost in number, but have more than doubled in capital and trebled in output since 1914

Transportation. The transportation facilities are adequate, as no part of the State is remote from navigable water, and the location gives the State direct connection with the large railway systems of the East. A greater part of the traffic is on the trunk lines running through the northern part. There are about 326 miles of steam railroads and 95 miles of electric railways, the latter having established communication with Philadelphia. The Chesapeake and Delaware canal, from Delaware City to Chesapeake City, Md., a distance of over 13½ miles, connects the Bays and furnishes communication by water between Baltimore and Philadelphia.

Defense. The National Guard of Delaware, consisting of 49 officers, and 735 enlisted men in 1925, was organized as one regiment of anti-aircraft artillery and one battery of coast artillery, at Laurel.

History. Delaware takes its name from the river and bay of Delaware, which was named after Lord de la Warr, Governor of Virginia, by Samuel Argall, one of the Governor's associates, who explored the bay in 1611. In 1623, Mey, a Dutch explorer, built Fort Nassau. Eight years later a Dutch company established a colony near Lewes Creek, which was later destroyed by the Indians. In 1638, Swedes built a fort on Christiana Creek, established a military post on the island of Tinnicum, and named the country New Sweden. The Dutch considered this an invasion of their territory, and drove the Swedes from the country.

When the English came into possession of New Netherland with the capture of New Amsterdam in 1664, Delaware was claimed by both the Duke of York and Lord Baltimore. In 1681 William Penn secured a grant of Pennsylvania from Charles II, later purchasing Delaware from the Duke of York, who subsequently became James II. For about twenty years Delaware, then called the "Territories," was governed as part of Pennsylvania. Then Delaware was given a separate legislature, but remained under the Governor of Pennsylvania and recognized the authority of that state until the Revolution.

Delaware is one of the original thirteen states of the Union, and was first to adopt the Federal Constitution, December 7, 1787. On account of its small size, Delaware is called the "Diamond State."

Places of Interest. In Wilmington is located the historic rock on which the Swedes first landed. Cooch's Bridge is another landmark, where, on September 3, 1777, before the battle of Brandywine, a preliminary struggle took place. It is said that here the Stars and Stripes were first unfurled in a land conflict. The Cooch mansion, where Lord Howe made his headquarters, stands a short distance from the bridge.

VIRGINIA

Area. The total area of Virginia is 42,627 square miles, of which 2,365 square miles are water surface. Virginia is thirty-third in size among the states of the Union.

Population.

Year	Population	Year	Population
1880	1,512,565	1910	2,061,612
1890	1,655,980	1920	2,309,187
1900	1,854,184		

The greatest density of population in the State is in Arlington County, and the lowest in Bath and Highland counties (11.7 per square mile each). The rural population is nearly two and one-half times that in towns of 2,500 persons and over. Richmond is the largest city.

Topography. Along the Atlantic lies a tract of land ranging in altitude from sea level to 400 feet, deeply indented by estuaries and bays between which the land lies in low, flat terraces and higher rolling uplands. This Coastal Plain tract is called Tidewater Virginia. It extends inland to the meridian of Richmond, where it overlaps the Piedmont Plateau, a rolling elevation extending to the Blue Ridge Mountains. These rugged mountains form a wall stretching entirely across the State from northeast to southwest. West of the Blue Ridge lies the Great Limestone valley of Virginia, a rolling to undulating surface with frequent low ridges and even some mountain masses. The valley is about twenty miles broad and extends to the Alleghenies. A small portion of the Appalachian Plateau lies in the extreme west.

Climate. The climate along the coast is equable and the daily temperature stable. The equalizing effect of the water diminishes inland and the stability of the temperature lessens. The mean annual temperature for the coast is 58.6° Fahr. In the Piedmont it falls to 55.9°; and farthest west to 53.2°, where the climate is marked with considerable variability.

Soils. The soils of the Coastal Plain are clays, loams, silt loams, sand, and sandy loams. In the Piedmont region are heavy red clays, gray sandy loams, and loams. In the northern portion of the Piedmont region the soils are the result of the weathering of red Triassic shales.

The Blue Ridge region is rough and rugged and largely forested; the soils are derived from crystalline schists and older metamorphic rocks. In the Limestone Valley are loamy or clay loam soils, this region being the richest agricultural portion of the State. In the Appalachians the soils are derived from sandstones and shales.

Mineral Resources. Considerable mineral wealth is found in Virginia. The important resources are bituminous coal, granite, sandstone, marble, and limestone, slate, iron ore, manganese ores, talc, soapstone, titanium, pyrites, phosphate rock, gypsum, barytes, marl, and mineral waters. The coal is obtained chiefly in the Appalachian region in the southwest. The mineral waters are medicinal, and many sanitariums and resorts have been established.

Gold, copper, lead, and numerous other minerals are found in smaller quantities.

Agriculture. The crops, ranked in approximate order of value, are the cereals, potatoes and other vegetables, tobacco, hay and forage, peanuts, fruits and nuts, cotton and cotton seed, small fruits, flowers, plants and nursery products, and sugar crops.

Of the cereals, corn is far in the lead, followed by wheat, oats, rye, buckwheat, and barley. Peanuts are raised principally in the southeastern counties close to the North Carolina border. These counties are also the great cotton producing districts of the State. Of the small fruits, strawberries lead in value; and of the orchard fruits, apples and cherries.

Stock raising is of much importance, chiefly of swine, cattle, sheep, horses, and milk cows.

Forests and Forest Products. The forests of the upland regions are still rich, especially in hardwoods, yielding yellow pine, oak, chestnut, gum, hemlock, hickory, walnut, cypress, yellow poplar, and cedar (total cut, 1924, over 696 million feet); but the original pine area of 4,000,000 acres has been entirely cleared of virgin timber. A large part of this is restocking.

Fisheries. Virginia has valuable fisheries, especially of oysters. Other catches are menhaden, shad, clams, crabs, squeteague, and alewives.

Manufactures. Virginia does not occupy the high position in manufactures that her many natural advantages make possible. Recent reports, however, show a considerable advance. The chief manufacturing industries are lumber and timber mills, tobacco factories, flour and grist mills, canning factories, textile mills, railway shop construction, the manufacture of leather, fertilizers, clothing, machinery, the grading, roasting, etc., of peanuts. The cotton mills in 1923 had about 707,000 active spindles, consuming over five times the cotton product of the State.

The important industrial cities are Richmond, Norfolk, Lynchburg, Petersburg, Newport News, Roanoke, Danville, Alexandria, Portsmouth, and Staunton.

Transportation. Virginia has excellent transportation facilities both by rail and by water. Four great railroad systems radiate from points within the State, three of them north and south lines, and the fourth providing an outlet to the sea for the great West Virginia coal districts. Other lines spread a network over the State, providing communication in every direction.

Ocean ports are at Norfolk and at Newport News. The Rappahannock, the James, the York, and the Elizabeth rivers are navigable far inland. Hampton Roads is the great naval parade ground, and provides refuge for vessels of all kinds. The Dismal Swamp Canal and the Albemarle and Chesapeake Canal are important freight routes.

Defense. The National Guard consists of one brigade of infantry, a regiment of field artillery, and one of coast artillery, a signal company, a tank company, a hospital and an ambulance company, 4,070 men in all.

History. The name Virginia, in honor of the virgin queen, Elizabeth of England, was first given to all the region along the Atlantic Coast between the Spanish possessions in the south and those of France in the north. England's claims to this region were based on John Cabot's visit to America in 1497. Following the visit of Sir Walter Raleigh's fleet to the coast of America in 1584, Virginia remained unsettled until 1606, when the London Company sent colonists to make a settlement on the James River at what is now Jamestown. Other settlers joined them and the colony flourished. In 1619, 20,000 pounds of tobacco were exported. In 1624, the London Company was dissolved and Virginia became a Crown Colony. The chartering of the neighboring colonies, Maryland and Carolina, reduced Virginia to approximately the present north and south boundaries including West Virginia. Numerous settlers entered from neighboring settlements, and by 1756 the population had grown to 292,000. Most of the new settlers sought the west, and differences of opinion were frequent between these new settlers and the old "tidewater" plantation owners. A gradual separation took place. During the Revolution Virginia took a leading part against England. After the establishment of the Federal Government, Virginia ceded to it the Kentucky region and the Northwest Territory.

Democratic principles continued to grow in the west, and slavery took firmer hold in the east. In 1861, secession occasioned a sharp division between the eastern and the western counties. The government in the east having decided to secede, the western counties set up a separate government, and were admitted by the Government at Washington as a State. By 1863, with the transfer of two more counties to West Virginia, Virginia was left with her present boundaries. Virginia played a prominent part in the Civil War, and later suffered much from "Reconstruction."

Places of Interest. At Appomattox is the famous scene of General Lee's surrender to Grant, April 9, 1865. At Arlington is the Custis estate, now the Arlington National Cemetery. Bull Run is the scene of the first battle of the Civil War, July 21, 1861, and is marked with appropriate monuments. Virginia is full of famous battlefields.

Jamestown contains ruins of the old church of the first English colonists. Mount Vernon, Monticello, Bermuda, Hundred and countless other historic landmarks are scattered over the State.

Medicinal mineral waters at Sweet Chalybeate, Rockbridge, Alum, Rawley, Alleghany, and at several places in Bath County, are much visited for their curative effects.

INDEPENDENCE HALL, PHILADELPHIA

WHERE HISTORY WAS AND IS MADE

"The Quaker City," "The City of Homes," and "The City of Brotherly Love" are names so self-descriptive that esteem for the character of the residents of Pennsylvania's metropolis cannot long be withheld. Here American independence had its birth, and the Constitution, which embodies the principles on which the liberty of this great Commonwealth rests, had its inception. The official home of the first presidential representative of the American people, it boasts also the parent mint of the United States. The old State House, which dates from 1729, is by many considered America's most interesting historic building. Here during the War of the Revolution met the Continental Congress, and in its East Room, or Independence Hall, on July 4, 1776, the Declaration of Independence was adopted. At the head of the stairway, hung on a chain of thirteen links—typifying the thirteen original states—is the famous Liberty Bell, which was the first in the United States to ring out after freedom was assured. In the building just west of the State House Washington was inaugurated as President in 1793 and Adams in 1797. From the northern suburbs of Philadelphia extends the range of hills known as the Trenton Prong of the South Mountains, whose other Prongs are the Reading and Cumberland. But the most magnificent scenery is to be found in other portions of the great Appalachian system in the state, notably in the Kittatinny or Blue Mountains, at the Delaware Water Gap, and in the famous Mount Pocono region. The valleys between the mountain ridges are very beautiful by reason of their exceptional fertility, which together with the magnificent forests and the unparalleled richness of its mining areas cause this member of America's oldest group of states to be accounted one of the wealthiest sections of the East.

In beautiful grounds, seventy-five acres in extent, in the heart of the nation's capital, rises the two-story white stone Executive Mansion of the President of the United States, officially as well as popularly known as The White House. It has been in existence since 1792, and was first used in 1800 by President Adams. Burned by the British in 1814, its rebuilding was completed four years later, and it has remained in constant use since 1818. This is but one of the magnificent structures that grace the beautiful city of Washington, notable among them being the Capitol, the War and Navy Building, the United States Treasury, and the Congressional Library, while the huge, impressive Washington Monument stands like a giant sentinel guarding the nation's official center.

THE WHITE HOUSE, WASHINGTON, D. C. (South Front)

Copyright, Detroit Photographic Co.

SCENE OF LORD CORNWALLIS' SURRENDER, YORKTOWN, VIRGINIA

In the neighboring state of Virginia, momentous to America was the act which on October 19, 1781, in an old homestead at Yorktown, virtually terminated the War of Independence. In this post-town on the York River, fifty-six miles from Richmond, Lord Cornwallis surrendered to General Washington his British Army of 7,073 officers and private soldiers, bringing to a close the long revolutionary struggle by assuring the victory of the Colonials and their French allies.

Near Yorktown in 1862 the Army of the Potomac also operated.

WEST VIRGINIA

Area. The gross area of West Virginia is 24,170 square miles, of which 148 square miles are water surface. The State ranks fortieth in size among the states of the Union.

Population.

Year	Population	Year	Population
1860	376,688	1900	958,800
1870	442,014	1910	1,221,119
1880	618,457	1920	1,463,701
1890	762,794		

In Ohio County, in which the city of Wheeling is located, is found the highest density of population among the counties of the State. The lowest density is in Pendleton County. Population is heaviest along the Ohio River and in the north central portion.

Before 1863 West Virginia formed a part of Virginia, and the figures as given for the years preceding 1870 are for the territory now included in West Virginia.

Topography. The greater part of the State to the west lies in the Allegheny Plateau, a part of the great Appalachian Plateau. This region is gently rolling, inclines slightly to the northwest, and is dissected by numerous stream beds. The plateau rises to a large area of broad flat hills which give way to the ridges and narrow valleys of the Appalachians. Within the eastern counties are several broad limestone valleys whose soils constitute the most fertile agricultural land in the State.

Climate. The climate of West Virginia varies with the altitude. The mean annual temperature ranges from 54° in the southwest to 52° in the central portion and 50° in the mountainous region. The annual precipitation is 35 to 40 inches.

Soils. The soils of the plateau are clay and sand loams mingled with humus and vegetable matter, and disintegrated limestone. In the extreme northeastern portion of the State is a sandy region, the least productive area in the State. In the higher portions of the mountain district to the east are productive clay soils well adapted for forest growth. In the valleys and on the gentler slopes are fertile stream and upland alluviums. Immediately west of the mountains is a hilly region admirably adapted for grazing purposes.

Mineral Resources. West Virginia is preëminently a mining State. More than 70 per cent of the total land area is underlain by a bituminous coal field, one of the largest continuous fields in the world. Petroleum and natural gas are produced abundantly. In 1900 the output of petroleum reached its highest point and since then has gradually decreased. In production of gas the State is far in the lead, large quantities being piped out to neighboring States. There are large iron mines in the State, the quarries produce large quantities of sandstone and limestone, and the output of salt is considerable. There are large deposits of clays and of white siliceous sand, and numerous medicinal springs are much sought because of their health-giving properties. Slate and grindstones are other products of the West Virginia quarries.

Agriculture. In general, farm lands in the western portion are given up to the production of crops, and in the eastern portion to stock raising. Over 62 per cent of the total land area is now in farms, but the acreage of farm lands, especially of farm woodlands, has declined. Corn leads all other crops in value; other products are hay and forage, potatoes and vegetables, fruits and nuts, and tobacco. Cereals besides corn are oats, wheat, buckwheat, rye, and barley, but these crops are comparatively small.

Large numbers of horses and cattle, sheep, and swine are raised in the State. Cattle and sheep are most numerous of the live stock.

Large quantities of apples, peaches, cherries, plums, and grapes are grown. There are still about five and a half million acres of unoccupied cultivable soil.

Forests and Forest Products. The forests of West Virginia are of considerable value. Lumbering on a large scale began after the Civil War, and West Virginia led in hardwood production, 1910 to 1917, when she lost to Arkansas. Lumber cut 1924 was over 614 million feet, a decrease of 100 million feet in six years. The principal trees are oak, chestnut, hemlock, maple, yellow poplar, spruce, beech, basswood, birch, hickory, ash, and walnut.

Manufactures. Though the great mineral resources of West Virginia have made the mining industries first among all industries, these and other natural resources are also responsible for the rapid growth of important manufacturing industries. The chief agents in the development of manufactures in the State are the extensive timber areas, the vast coal deposits, and the excellent water-power furnished abundantly by numerous streams.

First in importance among the manufactured products of West Virginia are lumber, iron, and steel. Other products are leather, tin plate, terne plate, glass, flour and grist, coke, railway cars, meat, foundry and machine shop products, pottery, terra-cotta and fire clay, paper and wood pulp. Iron and steel products are valued at over $85,000,000 a year, lumber products at nearly $50,000,000, and glass at over $42,000,000. Over 2,700 establishments employ upwards of 83,000 workers and produce nearly $500,000,000 worth of products a year.

The large industrial cities of West Virginia are Wheeling, Huntington, Charleston, Clarksburg, Parkersburg, Fairmont, and Bluefield.

Transportation. The cities and mining districts of West Virginia are well served by railroads. The principal railroads are the Baltimore and Ohio, the Chesapeake and Ohio, the Norfolk and Western, and the Virginian Railway. The Ohio River is of great commercial importance to West Virginia, occupying as it does the entire northwestern boundary line.

The Monongahela and the Kanawha rivers also furnish excellent means of coal and lumber carriage.

Defense. The National Guard of West Virginia consisted of 69 officers and 1,101 enlisted men in 1925, organized as one regiment of infantry, a medical company, and an additional company of infantry at Fairmont.

History. The region now included in the State of West Virginia formed part of Virginia until 1863. In the colonization era, the land was claimed by France by right of discovery; but at the close of the French and Indian War in 1763, France relinquished her claims. The Sioux Indians also claimed the country as a hunting ground by right of inheritance, but in 1768 they ceded their right to England.

The first European to visit the region is believed to have been John Lederer, who left Virginia in 1669 on a tour of exploration. In the same year, La Salle sailed down the Ohio along the present boundary line of West Virginia.

During the domination of England, the region was included in Virginia, and was settled by many immigrants, chiefly Germans and Protestant Scotch-Irish from settlements farther north. Racial differences brought about different political and economic views between the western and the eastern portions of the Virginia colony. Hostility increased, and attempts were made to form a new State. The division was accentuated by the natural barrier interposed by the mountains.

When Virginia seceded from the Union in 1861, the western counties met in convention, passed an act for the reorganization of the government, and elected a governor and other state officers. There thus existed two state governments in Virginia, one owing allegiance to the Confederacy, the other to the United States. The western counties drew up a constitution and applied for admission as a separate State. In 1863 West Virginia was admitted to the Union, and the counties of Berkeley and Jefferson, east of the mountains, were annexed.

The question of the legality of the formation of the new State was tested and proved by the Supreme Court.

During the Civil War the State furnished 36,000 soldiers for the Union and 10,000 for the Confederacy.

Places of Interest. In West Virginia are several noted health resorts. White Sulphur has been famous since 1772 for its healing springs and beautiful surroundings. Healing warm waters are located at Berkeley. Other resorts popular for their curative waters are Sweet and Salt Sulphur. Harper's Ferry is noted as the scene of John Brown's raid. During the Civil War, Rosecrans won a victory at Gauley Bridge; the Union soldiers were victorious at Philippi, June 3, 1861; and Rich Mountain was the scene of a Confederate defeat in July of the same year.

NORTH CAROLINA

Area. The gross area of North Carolina is 52,426 square miles, ranking twenty-seventh in size in the Union. Water surface totals 3,686 square miles.

Population.

Year	Population	Year	Population
1880	1,399,750	1910	2,206,287
1890	1,617,949	1920	2,559,123
1900	1,893,810		

In 1920, only 19.2 per cent of the entire population resided in cities and towns of 2,500 inhabitants and over, indicating that the community is chiefly devoted to agriculture. The average density of population was 52.5 persons per square mile in 1920, and is gradually growing. The highest density is found in Forsyth County, containing Winston-Salem, the largest city, and the lowest in Tyrrell County. Nearly 30 per cent of the population are negroes.

Topography. The surface of the State falls into three main natural subdivisions: The Coastal Plain, occupying the eastern one-third; the Piedmont section, occupying the center portion; and the Appalachian Mountain Ranges in the extreme western counties. The Coastal Plain is composed of a low, nearly level plain extending inland from the sea fifty to sixty miles and called the Flatwoods. It is bordered with numerous inlets, sounds, and bays, and is traversed by poorly established and shallow drainage channels. This Flatwoods region is succeeded by a more elevated rolling plain with well-established drainage, and hilly inter-stream areas.

The Piedmont section becomes gradually higher and more rolling toward the west, and merges into the mountain region at an altitude of 1,200 feet. The Appalachian region consists of an intricate series of ranges and cross-ranges, of which the highest point is Mount Mitchell with an altitude of over 6,700 feet.

In this region are found the most elevated land areas east of the Rockies.

Climate. The climate of North Carolina varies according to altitude. In the region farthest south, facing the sea, the mean annual temperature is 64° Fahr., approaching the subtropical in character. In the southwest, at an altitude of 3,800 feet, the mean annual temperature falls to 50° Fahr. Other regions in the State vary between these extremes; on the Coastal Plain, east and north, 61°; on the Piedmont Plateau, 60°; and in the mountain region of the west, 56°.

The average annual precipitation for the State is about 52 inches, ranging from 54 inches on the Coastal Plain to 53 inches in the mountains, and 48 inches on the Piedmont Plateau. On the eastern mountain slope the rainfall is very heavy, over 106 inches having been recorded.

Soils. The soils along the coast are silty loams, fine sandy loams, and fine sand. The higher regions inland are occupied by gray or yellow sandy soils. The lowest areas in the State are covered with dark mucky soils and actual peat and muck. In the mountain region and the western Piedmont is a deep soil of clay formed by the decomposition of feldspar and aluminous material mixed with sand.

Mineral Resources. The Piedmont and mountain regions of North Carolina contain many minerals, but in such small quantities as to be of almost no commercial value. The State leads in output of mica, and has rich iron deposits, chiefly high-grade magnetic ore. Lead, silver, gold, copper, zinc, barytes, corundum, feldspar, tin ore, talc, graphite, mineral waters, and gems are produced. Coal is found. Clay for making brick, tile, and pottery is found in large quantities. The quarries yield granite, limestone, and sandstone. Monazite and zircon, used in manufacture of incandescent light mantles, also occur.

Agriculture. Of the land area of the State, over 64 per cent is in farms. In the uplands in the central and western sections, are several counties devoting about nine-tenths of the land acreage to agriculture. The disappearance of the "plantation" type of farm, prevalent in the first half of the nineteenth century, is indicated by the great decrease in the size of farms, from an average of 368.6 in 1850 to 74.2 acres in 1920. But though the "plantations" have outwardly disappeared and the lands are parceled out to tenants, the original owners in many cases retain supervision, and in reality the plantation is still the prevalent farm unit.

Nearly one-third of the value of crops in 1919 was contributed by cotton, one-sixth by the cereals, one-third by tobacco, and less than one-tenth by potatoes and other vegetables. This proportion indicates the general character of crops in the State. The remaining crops are grains and seeds (other than cereals), hay and forage, fruits, and nuts. Corn is the leading cereal, comprising about three-fourths of the total grain crop. The average annual peanut crop is about 5,000,000 bushels.

Cotton is raised mainly in the east and south central portion. The peanut crop is concentrated on the Coastal Plain, chiefly in the northeast. Vegetables other than potatoes, flowers and plants, and nursery products are crops of increasing importance. There is also a large rice crop. Swine, cattle, mules, and horses are raised.

Forests. Virgin yellow pine forests once covered over 11,000,000 acres, but only about 500,000 acres remain, and 1,250,000 acres of cut-over land are lying idle. The available stand, 1921, was over fifteen billion feet. In 1924, the cut was a little over one billion, chiefly pine, oak, hemlock, spruce, chestnut, yellow poplar, cedar, tupelo, and basswood.

Fisheries. The important fisheries are of shad, oysters, mullet, alewives, clams, black bass, menhaden, and bluefish. Hatcheries have been established, and State and Federal experts are working toward the development of the resources.

Manufactures. To a large extent the manufacturing industries depend on the products of the forest and soil. Cotton goods, tobacco, and lumber have the largest share in manufactures.

Among leading manufactures are textiles, including all branches of cotton and woolen goods (State ranks next to Massachusetts in cotton spindles), lumber, furniture, tobacco, cigars, cigarettes, cottonseed oil and cake, flour, fertilizers. The chief industrial cities are Winston-Salem, Durham, Charlotte, High Point, Gastonia, Wilmington, Greensboro, Asheville, Raleigh, and Newbern.

Transportation. Railways are well developed in North Carolina. The principal systems are the Southern, the Atlantic Coast Line, the Norfolk and Southern, and the Seaboard Air Line. There are numerous safe harbors along the extensive coast-line, and the Roanoke, Cape Fear, and Neuse rivers provide facilities for navigation to a considerable distance inland.

The chief seaport is Wilmington, where extensive harbor improvements have aided facilities for export trade.

Defense. The National Guard consists of one regiment infantry, one battalion of engineers, one each of ambulance, hospital, veterinary and motor transport companies, one squadron of cavalry, one regiment of field artillery, one battery of anti-aircraft artillery, and one regiment of coast artillery; in all, 3,356 men.

History. Carolina was originally named in honor of King Charles I of England. The first well-authenticated visit was made in 1584 by a fleet sent out by Sir Walter Raleigh, though Verrazano and Cabot may have seen the coast in earlier years. Raleigh made three unsuccessful attempts to establish a colony on Roanoke Island, and it was not until 1660 that the first permanent settlement was established by colonists from Virginia. Charles II granted the region to eight "lords proprietors," and a government was organized. At the time of the grant the province included North and South Carolina, Georgia, and a part of Florida, and as far west as the Pacific. In 1729, seven of the "lords proprietors" sold their shares to the Crown, and the province was divided into two royal provinces, North and South Carolina. By 1733 the present southern limit had been established by the formation of Georgia. The formation of Tennessee in 1790 established the western limits. During the Revolution the State was twice invaded, and the battles of Moore's Creek and Guilford Court House were fought on North Carolina soil. In 1789 North Carolina, one of the original thirteen states, ratified the Federal Constitution.

Places of Interest. Endowed with fine climate and beautiful natural scenery, North Carolina is dotted with attractive and much frequented resorts. Among the popular resorts are Southern Pines, Brevard, Asheville, Andersonville in the mountains, Hot Springs with noted mineral waters, and Tryon, a favorite winter resort.

BEAUTIES OF THE CAROLINAS

BALD FACE MOUNTAIN, SAPPHIRE, NORTH CAROLINA

Copyright, Detroit Photographic Co

The scenery of the irregular plateau in the western portion of North Carolina is so magnificent that it has well earned for all time the name of "Land of the Sky." Its area of thirty thousand square miles between the Blue Ridge and Cumberland mountains is itself mountainous, twenty-three of its peaks rising to a height of more than 6,000 feet. This region is traversed by rushing rivers, varied by charming waterfalls and cascades, dotted with beautiful lakes, and made brilliant with the ever changing shades and tints of the verdure. It abounds in heavy primeval pine forests, and in streams which prove a rare temptation to the sportsman. No feature that contributes to perfection of scenery and climate is lacking, and the exquisite Sapphire Country and Land of Waterfalls are close rivals for the honor of first rank in attractiveness to health-seekers and beauty-lovers.

Asheville is the center of this enchanting country, and is a noted all-the-year-round resort. In the spring the mountains in its vicinity are ablaze with the rich colors of azalea, laurel, and rhododendron which grow in profusion on their slopes. Deep, rocky gorges diversify the landscape, and lure the appreciative traveler on and on by reason of their somber grandeur. Whether traversing the dizzy heights or plodding beside the rippling, gurgling brooks of the low valleys, the outlook is bewitchingly beautiful, veering from the simple to the sublime with startling rapidity. One section of country contains over fifty cataracts, cascades, and waterfalls, one of the number, with a sheer fall of 370 feet, being accounted a close rival of the far-famed Yellowstone falls.

Lake Fairfield nestles in the heart of the Beautiful Sapphire Country, the grandeur of whose crags, cliffs, and mountains, the clearness, depth, and charm of whose sparkling lakes, hillside torrents and roaring cataracts reveal a favored land scarcely rivaled in the loveliness and impressiveness of its scenic features, one item being its mighty mountain peaks, eighty of which tower more than 5,000 feet above sea level. The notable burial place of South Carolina's largest business center lies somewhat north of the city, and contains the graves of many social leaders in the early days of the colonial town. The fame of Magnolia Cemetery's live oaks covered with Spanish moss, is widespread, one of its trees having boughs that spread 100 feet, while the trunk of another tree exceeds seventeen feet in circumference.

LIVE OAK, CHARLESTON, SOUTH CAROLINA

Copyright, Detroit Photographic Co.

SOUTH CAROLINA

Area. The gross area comprises 30,989 square miles, of which 494 square miles represent the total water surface. South Carolina is thirty-ninth in size among the states of the Union.

Population.

Year	Population	Year	Population
1850	668,507	1890	1,151,149
1860	703,708	1900	1,340,316
1870	705,606	1910	1,515,400
1880	995,577	1920	1,683,724

The population is comparatively evenly distributed throughout the State, though the greatest general density shows a tendency toward the west. Charleston County, containing the city of Charleston, has the highest density in the State, and Jasper County, in the south, the lowest. The rural is still far in excess of the urban population. In 1920 the inhabitants living in towns of 2,500 or over constituted only 17.5 per cent of the total number in the State. Negroes are slightly in the majority.

Topography. More than three-fifths of the State lies within the Coastal Plain, which rises from sea-level on the coast to about 350 feet at the beginning of the Piedmont Plateau. The plateau occupies most of the remainder of the State. The coast-line, except in the north, is broken by a series of inlets and flat, low islands. Large salt marshes occupy extensive areas along the coast and for a considerable distance inland. The land rises slowly and becomes rolling and broken by valleys toward the plateau. The Piedmont region rises from about 350 feet in the east to 1,100 and 1,200 feet in the west, the whole region undulating and becoming more and more broken and hilly as the Appalachian Mountains are approached. Foothills give way to the ridges and mountain ranges of the Blue Ridge. The highest point is Table Mountain, 4,000 feet.

Climate. The influence of the sea tempers the climate of South Carolina considerably. Along the coast the seasons are mild and equable. The mean annual temperature at Charleston is 66° Fahr., 51° for the winter and 81° for the summer. The mean annual temperature for the whole State is 63°. The average annual rainfall amounts to forty-nine inches, ranging from 53.4 at Charleston to 44.4 inches at Statesburg in Sumter County.

Soils. In the lowlands along the coast, fine sandy loams, and mucky and sandy loams prevail. Inland the soils are sands, sandy loams, and fine sandy loams with a subsoil of red or yellow sandy clay. The soils of the Piedmont Plateau are principally gray, sandy surface soils with a stiff red clay subsoil, or stiff red clay soils.

Mineral Resources. The most valuable mineral product of South Carolina is stone of the cheaper kind, for paving blocks and crushed stone. Next in value come clay and clay products, followed by stone and gravel.

Abundant mineral waters are to be found in the State, and in the southeastern counties, considerable phosphate rock. Small quantities of gold, barytes, mica, and marl are also produced.

Agriculture. Though the plantation type of farm common up to 1850 has apparently disappeared, the land being parceled out, the plantation is still mainly the unit of farm management, and the land simply rented to tenants who remain under the supervision of the plantation owners.

In 1860, 83 per cent of the total land acreage was in farms. In 1870, because of the Civil War, it had fallen to 62 per cent; but gradually rose again to near 64 per cent in 1920. The majority of farmers are negroes, the proportion of farms operated by this race in 1920 being over 56 per cent.

Cotton is the leading crop of South Carolina, contributing over one-half of the total value. The leading cotton-producing centers are in the western and northwestern portions of the State. Other important products are cereals, potatoes and vegetables, hay and forage, tobacco, grains and seeds other than cereals, sugar crops, sorghum sirup, small fruits, flowers, plants, and nursery products. The leading cereals are corn, oats, wheat, rye, rough rice, and barley.

Forests and Forest Products. About 66 per cent of the total area of the State is woodland. Of the virgin pine forests of 8,000,000 acres, only 600,000 acres were left in 1920, with stand of nearly fourteen billion feet. Cut, 1924, was 878,517,000 feet, chiefly pine, gum, and cypress. Oak is the main hardwood.

Fisheries. The fisheries of South Carolina are valuable. The important catches are oysters, whiting, shad, and sea bass. Other fish in abundance are clams, shrimp, terrapin, mullet, jewfish, channel bass, and squeteague. The oyster fishery represents about half the total value of all catches.

Manufactures. The manufacturing industries of South Carolina are based largely on the natural resources of the State, and are advancing rapidly. The leading industry is the making of cotton goods, including cotton small wares. This industry employs about three-fifths of the total number of wage-earners in the State. Next in importance are the lumber and timber industries, the products consisting of logs, rough lumber, millwork, and packing boxes. The largest number of the establishments in South Carolina are engaged in this industry. Other important manufactures are cottonseed oil and cake, fertilizers,—dependent on the production of phosphate rock and cottonseed meal,—printing and publishing, cars and general shop construction and repairs by railway companies, turpentine, and resin.

The turpentine and resin manufacture is one of the oldest industries in the State, though now fast declining.

The important manufacturing cities are Charleston, Columbia, Greenville, Spartanburg, Florence, Anderson, and Sumter.

Transportation. The railroad facilities in South Carolina are excellent. The main lines are operated by the important trunk line companies of the south, the Southern, the Atlantic Coast Line, and the Seaboard Air Line.

Water transportation is extensive, most of the rivers being navigable for a considerable distance inland. The important rivers are the Savannah, Waccamaw, Great Pedee, Cooper, Ashley, Edisto, South Edisto, Beaufort, and the Santee.

Charleston is one of the important seaports of the Southern Atlantic coast-line, and, with Beaufort and Georgetown, provides excellent facilities for export and import trade. Recent harbor improvements at Charleston have been of great benefit.

Defense. The National Guard of South Carolina consisted, in 1925, of 105 officers and 1,976 enlisted men, organized as one regiment of infantry, two batteries of field artillery, one battalion of engineers, one battalion of coast artillery, two motor transport companies and one ambulance company.

A United States Naval Station is located near Charleston, and a large coaling station has been established north of the city.

History. The first Europeans to visit the coast of what is now South Carolina were a party of Spaniards from Santo Domingo in 1521. Attempts were made at settlement, but it was not until 1671 that colonists established a permanent settlement at Charleston on the west bank of the Ashley. In 1680 the colony moved the settlement to its present site. The whole region, including North Carolina and Georgia, had been granted by Charles II to eight "proprietors," who, from 1665, under various constitutions almost feudal in nature, remained in power until 1719. These constitutions were effective in the establishment of the plantation system, and caused much of the disaffection which led to revolt. From 1719 inhabitants and proprietors engaged in a long series of disputes over popular rights, which culminated in revolt and the overthrow of the proprietors, the colony then coming directly under royal control. It remained so until 1775, when the royal governor was deposed by the Revolution, and South Carolina became one of the original thirteen states of the Union.

In 1860, South Carolina was the first State to secede from the Union.

Places of Interest. There are a number of pleasant winter and pleasure resorts in South Carolina. Among the well-known haunts are Aiken, enclosed by fragrant pine forests, Camden, Greenville, Charleston, Magnolia, near Charleston, Walhalla, Beaufort, and Summerville.

Among historic places are Fort Sumter, Cowpens battlefield, King's Mountain, near Blacksburg, scene of an American victory in 1780, and the Church of St. James near Otranto, built in 1711.

GEORGIA

Area. The extreme length of the State from north to south is 315 miles; breadth, 250 miles; and its area, 59,265 square miles, of which 540 square miles are water surface. Georgia ranks twentieth in size among the states of the Union.

Population.

Year	Population	Year	Population
1890	1,837,353	1910	2,609,121
1900	2,216,331	1920	2,895,832

In 1910–20, urban population rose from 20.6 to 25.1 per cent of total, while rural declined from 79.4 to 74.9 per cent. Negroes form 41.7 per cent of the total population.

Topography. The State rises in terraces from sea-level along its southeastern boundary to altitudes of more than 4,000 feet. Over one-half of the State is included in the Coastal Plain region, the highest altitude of which is less than 500 feet. The Piedmont section forms a broad belt across the north central portion, while the extreme northern and northwestern parts consist of high peaks and ridges of the southern Appalachian Mountains, with numerous limestone valleys and a small area of the Appalachian Plateau. That part of Georgia along the Atlantic coast consists of the low-lying, nearly level Flatwoods portion of the Coastal Plain. The immediate shore line is bounded by a series of islands only slightly elevated above sea-level. The greater part of the Coastal Plain, stretching from the Flatwoods section to the margin of the Piedmont, lies at an altitude ranging from 100 to 400 feet above sea-level, and is nearly level or gently rolling in character, with numerous hills along the higher inland margin. Extensive areas of the mountain section in northern Georgia are covered by forests.

Climate. The climate of Georgia is of considerable variety, determined mostly by proximity to or distance from the sea, and according to altitude. The mean annual temperature ranges from about 59° on the northern mountains, to 70° on the Coast; 61.3° at Atlanta.

The average rainfall is about 49 inches annually, the maximum of 71.7 inches having been recorded in the northeast, and the minimum in the central portion.

Soils. A considerable section of the Flatwoods is low and swampy and covered by dark, mucky soils, while the portion lying higher up is occupied by gray and yellow sandy loams. On the Coastal Plain the soils are quite varied, ranging from gray and yellow sandy soils to heavy red sandy loams and red clays. In the Piedmont region the principal soils are a heavy red clay, and a gray sandy loam with a heavy red clay subsoil. The soils of the eastern portion of the mountain region are red loams and clays. Within the western mountain and plateau region the soils are principally sandy and silty loams, and are not extensively used for agricultural purposes. The soils of the limestone valleys consist of either dark brown or red clay soils, or of cherty gray silty loams or stony loams.

Mineral Resources. The State has considerable mineral resources. In the mountain ridges and valleys are deposits of iron, coal, manganese, roofing slate, and aluminum. Georgian marble has won a national reputation, the quarries of Georgia also producing considerable quantities of granite and limestone. Extensive clay deposits occur, and gold has long been found in the northeastern portion.

Other mineral products are asbestos, bauxite (aluminum ore), silver, graphite, lime, ocher, infusorial earth, natural cement, soapstone, and talc. Mineral waters also are abundant.

Agriculture. Over 67 per cent of the State's total land is in farms, of which 41 per cent are operated by negroes. Georgia in 1923 ranked second state in production of cotton, and has been the largest producer of sea-island cotton. The crop contributes over one-half of the total value of all crops. In the northern part of Georgia, cereals are produced, of which corn contributes about eleven-twelfths of the total value. Other important products are oats, wheat, sweet potatoes, hay and forage, garden truck, and peanuts.

Rice is an important product of the coast region. The production of sugar cane is increasing, and tobacco is one of the important crops of the State.

Stock-raising is an important agricultural pursuit. Of the farm animals, swine are most numerous, numbering 2,071,051 in 1920. Cattle, milk cows, horses, mules, sheep, and goats are also raised. It is estimated that there were 540,000 dairy cows in the State in 1925, and 60,000 sheep.

Forests and Forest Products. The forests of Georgia are principally in the mountainous section in the north, and in the Flatwoods section. They furnish immense amounts of raw material for manufacturers. The principal timbers are yellow pine, cypress, oak, and yellow poplar. The forests, 1921, covered about 42,000 square miles, including 15½ million acres pine lands (700,000 virgin timber), with stand of over 21¾ billion feet. Cut, 1924, was over 1,200 million feet, chiefly yellow pine.

Manufactures. Although Georgia is an agricultural rather than a manufacturing State, it has for the past sixty years been one of the most progressive industrial states of the South. Lumber holds high rank, and considerable turpentine and resin are still produced, but output of naval stores is waning in all Southern States, with depletion of pine forests.

The manufacture of cotton goods naturally ranks first in importance, the value of its products amounting to over $200,000,000 annually. Hosiery and knit goods, which are made almost entirely of cotton materials, are the most important branch of this industry. The manufacture of cottonseed oil, fertilizers, and lumber products are among the leading industries.

Transportation. The rapid industrial growth of Georgia is due in a great part to its superior transportation facilities. The State is traversed by important railway systems, and it also possesses the advantages of excellent water communication. The Savannah River, on the east, is navigable as far as Augusta by light-draft vessels; and the Chattahoochee River, on the west, as far as Columbus. Other streams, including the Ocmulgee, Altamaha, and Oconee rivers, are navigable for considerable distances. Other rivers offer lesser advantages of navigation to a large portion of the State. Savannah, the principal port, with a river frontage of over eight miles, has one of the finest harbors in the South.

Defense. The National Guard of the State of Georgia consisted of 224 officers and 3,424 enlisted men in 1925. They were organized as two regiments of infantry (one of which was colored), one tank company, one regiment of field artillery, one hospital company, one squadron of cavalry and one company of engineers.

History. Georgia is one of the original thirteen states. It was named in honor of George II of England. De Soto, a Spaniard, explored the interior in 1540; and Ribault, a Frenchman, visited the coast in 1562. In 1560, the Spaniards began mining operations in Georgia, and continued for a hundred years. The greater part of what is now Georgia was included in the Carolina grant of 1663, and the remainder was included in the Carolina grant of 1665 made by King Charles II to the proprietors of Carolina. In 1729 seven of the eight proprietors sold their shares of the territory to the English Crown; and in 1732, these lands were granted to a body of trustees organized "to establish the Colony of Georgia in America." The territory then became a colony under General James Oglethorpe as Governor.

He landed at Yamacraw Bluff, February 12, 1733, and laid the foundations of the city of Savannah. In 1752 the trustees of Georgia surrendered their rights to the Crown. In April, 1776, Georgia instructed her delegates in Congress to vote for independence. In December, 1778, the British captured Savannah, and held it until 1782.

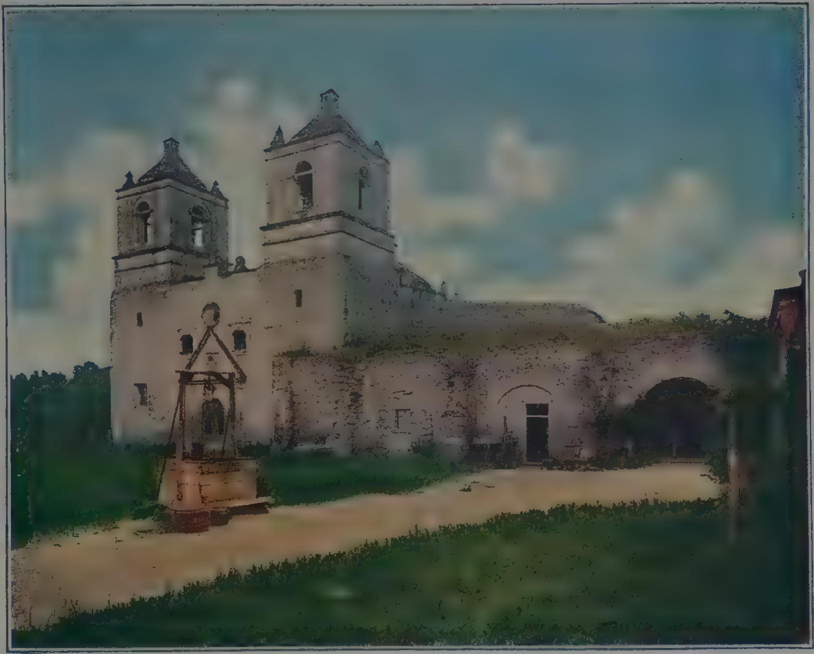
The first constitution was framed, 1777, and on January 2, 1788, the Federal constitution was ratified. In 1802 Georgia ceded to the United States all the lands west of the Chattahoochee River, embracing the greater part of the present states of Alabama and Mississippi. Since 1802 the boundaries have remained unchanged.

Places of Interest. Chickamauga, the bloodiest battle of the Civil War, and the Battle of Missionary Ridge, were fought on Georgia soil. Numerous other points in the State were the scenes of military encounters during the American wars. A park commemorates the notorious Civil War prison at Andersonville. At St. Simons is the ancient battle place between the early colonists under Oglethorpe and the invading Spaniards. Gainesville and Thomasville are popular health resorts.

HISTORIC SENTINELS

It is to the foresighted and energetic founder of the youngest of America's thirteen original colonies, General Oglethorpe, that Georgia, and particularly her second city, Savannah, owes so much of her beauty and prosperity to-day. Here was afforded a refuge for the worthy poor of England and for the Protestants of all nations. But the British Government was also concerned in the establishment of this state, its intention being to prevent the French of Louisiana and the Spaniards of Florida from invading and overrunning the already flourishing colony of South Carolina. Georgia holds a conspicuous position in America's historical annals, for it was from Atlanta, the state capital and chief center, after its siege, capture and a two months' bivouac by the Army of the North, that General Sherman commenced his famous March to the Sea.

In 1730, fully three years before Georgia was granted her charter, there was built in San Antonio, the "cradle of Texas liberty," the old, historic Concepcion Mission. It was constructed under Spanish rule to serve the double purpose of church and fortress, and its walls to-day stand stoutly resistant to the assaults of time. But from its towers no longer is kept watch for an enemy. Its loopholed windows, against which in former days hostile arrows and bullets were hurled, now overlook only peaceful meadows, and the grass-grown courtyard is quiet save for the footfalls of the Franciscan friars who have reclaimed the custody of the church and now guard its altar with jealous care.



THE OLD CHURCH OF CONCEPCION MISSION, SAN ANTONIO

The capital of Texas during the periods of both Spanish and Mexican administration, San Antonio possesses many an historic structure, the most interesting of which is the chapel of the Mission San Antonio de Valero, more commonly known as the Alamo Mission, its name being derived from the grove of alamo or cottonwood trees in which it is built. So great is deemed its importance that it is maintained as a public monument, having been purchased in 1883 by the Lone Star State. Of another of the old buildings constructed in the early half of the eighteenth century, the San Fernando Cathedral, little remains in the edifice which now stands on the original place of worship; but memory clings to these important landmarks of days gone by, and the city and the state are proud of their possession.

An ancient but still substantial gateway affords entrance to the quaint, interesting old Florida city, St. Augustine, which was the first permanent settlement of Europeans in the United States. Its chief street is but seventeen feet wide, and there remain many old Spanish homes with balconies overhanging the thoroughfares, while the foliage of orange and citron trees, magnolias, azaleas, and palmettos, hides many a crumbling wall. In one of the narrow ancient streets is situated the house which is said to be the very oldest residence in the United States. It was built by the Huguenots in 1564, occupied for fifteen years by Franciscan monks, and thereafter was retained in the possession of the same family for 292 years. Since 1882 it has been used as a repository for historic relics of Florida. Another ancient building is the admirably preserved Spanish fort of San Marco, now called Fort Marion, an exceedingly well preserved example of the military architecture of the days of the old Spanish rulers. Many evidences of Indian, Continental, and civil warfare also remain.

It is these reminders of past glory and of historic interest which attract and then grip visitors who have been enticed by the never-failing lure of sport with gun and rod; or who have sought the sunny Southland for the sake of its climate, its fruit, flowers and scenic charm, and to restore health and vigor to depleted systems in the spicy air of the great pine forests.

OLD CITY GATE, ST. AUGUSTINE, FLORIDA

FLORIDA

Area. Florida is called the "Peninsula State." The total area is 58,666 square miles, of which 3,805 square miles comprise the water surface.

The State ranks twenty-first in size in the Union.

Population.

Year	Population	Year	Population
1890	391,422	1910	752,619
1900	528,542	1920	968,470

The urban population represents nearly 37 per cent of the total population. Negroes form 34 per cent of total.

Topography. The surface of the State is very low and flat, rising from a few feet above sea level along the coast to a central ridge, extending north and south and forming a divide, which separates the streams of the east coast from those of the west. The highest elevation above sea level is 300 feet, and the average elevation is less than that of any other State except Louisiana. Topographically, it is similar to southeastern Alabama. Along a great part of the western coast and nearly the whole of the eastern coast extend a line of sand reefs and narrow islands, embracing shallow bodies of water called lakes, lagoons, bays, and harbors. The central region has a remarkably large number of lakes, approximating 30,000. They are caused largely by sinkholes or depressions resulting from the solution of the limestone of the region. Subterranean channels connect many of these lakes, and a change in the surface of one is often accompanied by a change in the surface of another. The southern section of the peninsula is built up of a succession of coral dikes. In the upper part of this southern section is Lake Okeechobee, the waters of which merge into the Everglades, an extensive swamp covering a large part of the lower division.

Climate. Florida may be said to have three distinct climatic zones. North and west of a line drawn through Cedar Keys and Fernandina the climate is decidedly southern, similar to that of the Gulf States. From this line to another extending from the mouth of the Caloosahatchee to the Indian River outlet, the climate is semi-tropical. Farther south the climate is sub-tropical. Owing to the fact that the semi-tropical and sub-tropical zones are nearer the course of the Gulf Stream and have the benefit of the trade winds, the climate there is more uniform than in the northwest where the temperature ranges between extremes of 103° in summer to 13° in winter. The mean annual temperature of the State is 70.8°. The rainfall averages about fifty-two inches annually.

Soils. The great southern swamps, known as the Everglades, are occupied by deep, mucky soils, usually resting on the coral rock and limestone of that section and requiring drainage to fit them for cultivation. The Flatwoods portion of Florida occurs north of the Everglades and here the soils are prevalently dark gray sandy loams with many areas of muck. The extreme northern and northwestern portion of the State consists of the more elevated and rolling part of the Coastal Plains, where the soils are principally yellow and gray sands and sandy loams, underlain either by yellow clay or red clay subsoil.

Mineral Resources. Phosphate rock is the chief mineral product of the State. Land and river pebble phosphate have been found in scattered deposits in a belt on the west coast about thirty miles wide and extending from Lake Okeechobee to Tallahassee. Since these deposits were located in 1888, Florida has become the principal source of the world's supply of phosphate. This State is also the principal source in the United States of fuller's earth, a deposit of which was first discovered in 1893. Clay, including kaolin, is mined to some extent. Mineral waters are found in abundance. Other minerals discovered but not commercially developed are gypsum, lignite, and cement rock. No metals have ever been discovered in Florida.

Agriculture. While agriculture is the principal occupation of the State, little over 12 per cent of the entire land area is in farms. Combining the climates of a temperate and semi-tropical nature, the crops of Florida are varied. In the north the products include peaches, pears, and cotton, while the middle and southern counties produce the finest oranges and pineapples, the product of the latter far surpassing that of California. Grapefruit, guavas, and lemons are also successfully grown in this portion of the State. The rice crop, grown in the south, is relatively small. Tobacco, which declined after 1860 on account of the competition of Cuba and Sumatra, has revived through the introduction of Cuban and Sumatran seed. The sweet potato and peanut crops have become very valuable. Sea island cotton of a very high grade is grown in Alachua County. The lowlands of the south are being drained, partly by the State and partly by private companies.

Irrigation is practiced, especially by tobacco growers in certain localities, to resist the effects of the droughts which are common from February to June.

Forests and Forest Products. The forests of Florida are extensive and produce valuable timber, chief of which are yellow pine and cypress. Hardwoods are not extensive; the principal timbers cut are oak, yellow poplar, and hickory.

Fisheries. The catch in Florida waters is very valuable and the number of species is great. The chief commercial species are the mullet, shad, redsnapper, and mackerel. The sponge and oyster output is extensive. The tarpon and kingfish are numerous in Florida waters, and are much sought by sportsmen.

Manufactures. While Florida is not primarily a manufacturing State, its manufactures have shown a steady growth during the last sixty years. The three leading industries are tobacco manufactures, lumber and timber, and turpentine and rosin. The tobacco industry is practically confined to cigars and cigarettes, almost entirely cigars. This branch of industry is carried on chiefly by Cubans at Key West and Tampa. Most of the tobacco is imported from Cuba. The output of the industries depending upon the forests amounts to nearly 45 per cent of the entire manufactured product of the State. The manufacture of fertilizers from the phosphate deposits is also important.

Transportation. Railroad transportation is good except in the Everglades. Navigation is excellent on a number of rivers, and there are four good ocean ports. The Florida East Coast Railway extension to Key West was opened January 22, 1912. The larger cities and towns are all connected by excellent auto roads.

The State has more coast-line than any other in the Union; and since 1890 much has been done by the National Government, aided by private enterprises and local authorities, to improve the coast harbors and extend the limits of river navigation.

Defense. Florida's National Guard consists of 2,180 men. It is organized into the following units: one regiment of infantry, one regiment of field artillery, one battalion of coast defense, one motor transport company, and two companies of engineers.

History. Florida derives its name from Easter Sunday (Pascua Florida—the Feast of the Flowers). It was on that day in 1512 that Ponce de Leon, a Spaniard, first landed on the coast near the present site of St. Augustine. The French founded the first colony at the mouth of the St. Johns River in 1564. The following year Spaniards destroyed this colony and founded St. Augustine. In 1586 this city was burned by Sir Francis Drake, an Englishman. Rivalry continued between the English and the Spaniards until 1763, when Spain transferred Florida to Great Britain in exchange for Cuba. In 1783 Great Britain retroceded Florida to Spain, which retained possession until the territory was purchased by the United States in 1819. The transfer was made in July, 1821, and in 1822 a territorial government was established for east and west Florida, which comprised the same area as the present state. In the following year the two were united.

Florida adopted a state constitution in 1839, but was not admitted into the Union until six years later.

Places of Interest. Florida is replete with attractive winter resorts for tourists. Palm Beach and Miami are among the most celebrated in the country. Key West is one of the most noted cities in the United States, on account of its cigar factories and fishing wharves. It is also one of the most important naval stations in the Union. St. Augustine is the oldest city in the country, dating back over 350 years. Jacksonville is the metropolis and is a popular tourist resort; 1925–26 saw great development of both east and Gulf coasts, and the creation of many new resorts.

ALABAMA

Area. Alabama ranks twenty-eighth in size among the states of the Union, with a gross area of 51,998 square miles. The water surface totals 719 square miles. The State is 330 miles long and 200 miles wide.

Population.

Year	Population	Year	Population
1880	1,262,505	1910	2,138,093
1890	1,513,401	1920	2,348,174
1900	1,828,697		

The population is still preëminently rural, though the number of inhabitants in cities of over 2,500 population shows a much greater relative increase than the rural population. Negroes constitute about 40 per cent of the inhabitants. They are massed chiefly in the cotton belt, where they constitute three-fourths of the people. The foreign element in the population of Alabama is notably small, amounting to less than one per cent.

Topography. The southern three-fifths of the State is occupied by a portion of the Coastal Plain region, a low plain sloping gradually to the sea, merging to the north into a rolling region with numerous foothills. The northern part of the State is more diversified. In the extreme north lies a portion of the Cumberland Plateau region, made up of generally level highlands becoming considerably broken and rugged toward the east, and drained by the Tennessee River. In the east central portion of the State lies a part of the Piedmont division; while in the north and northeast, the southern extremity of the Appalachian Valley region with its irregular high ridges and limestone valleys extends into the State. The highest altitude in the State is Che-aw-ha Mountain, 2,407 feet.

Climate. The climate of Alabama is tempered in the south by the winds from the Gulf, and in the north by the elevation. The mean annual temperature ranges from 67° at Mobile on the coast, to 59° in De Kalb County in the northeastern portion. The average winter temperature for the State is 35°, and for about 35 days in the year the temperature falls below the freezing point.

The average yearly rainfall varies from 62 inches along the coast to 53 inches in the rest of the State.

Soils. Alabama may be separated into four natural divisions according to the character of the soils: cereal, mineral, cotton, and timber belts. The cereal belt extends across the northern part of the State, embracing a portion of the Tennessee Valley. It is occupied by red clays and dark loam soils. The mineral belt, which is the largest of the four sections, lies south of the cereal belt. The soils are of varying fertility, and are derived from the underlying rocks. Almost all known minerals are found within this division. South of the mineral belt lies the cotton belt, extending east and west across the State, the soil rich in limestone and marl formations. The timber belt, where the soil is sandy, produces most of the rich timber products of the State.

Mineral Resources. Alabama is rich in minerals, especially coal, iron, limestone, clays, granite, and marble. Gold, silver, lead, and copper are found in minor quantities, as well as salt and sulphur. Much bauxite is mined. The coal output makes up about three-fourths of the total value of all minerals produced in the State. There are three distinct bituminous coal fields in the northern part of the State, covering an area of over 8,000 square miles. Near these coal fields are extensive deposits of iron ore, Alabama ranking among the leading states in the amount of ore produced.

Agriculture. Farming is the principal industry of Alabama, and is facilitated by advantages of both soil and climate. While cotton and corn are the chief productions, all cereals, sugar, sweet potatoes, tobacco, vegetables, root crops, berries, fruits, and nuts are extensively grown. On the bottom lands in the south, sugar and rice are cultivated.

Cattle, swine, and sheep raising receive much attention throughout the State.

Cotton is the most important crop in Alabama, and is the chief source of the wealth of the State. This product contributes nearly 50 per cent of the total value of all crops in Alabama. Although cotton is grown to some extent in every county, there is a concentration of the acreage in the counties located just south of the central portion of the State. Fruit culture is carried on extensively. Sugar crops and tobacco are also among the important agricultural products of Alabama. There are ten experiment stations to provide higher scientific education in agriculture for the farmer boys.

Forests. About 60 per cent of the surface is forest-covered, the merchantable stand being over 100 billion feet. Nearly two billion feet of lumber was cut in 1924. Southern yellow pine and oak are the chief stands, but walnut, poplar, gum, hickory, cypress, and red cedar are also abundant. Much turpentine and resin are produced.

In the canebrakes of Marengo County are found groves of cedar of great height. Here also is found hanging in festoons from the trees the Spanish moss which is extensively used for filling mattresses and cushions. The longleaf pine of the South yields a high-grade timber for naval stores.

Manufactures. Alabama has many natural advantages for manufacturing. A vast amount of material comes from the forests, exhaustless supplies of coal and iron ore from the mines, and great quantities of cotton from the soil, all providing the raw materials which form the basis of the leading manufacturing industries of the State. The many rivers provide abundant water-power, and trade facilities are excellent.

The cotton and timber products lead all other manufactures in value. The close proximity of the coal fields to the iron mines has made the iron and steel industry very prosperous. Other very large industries are foundry and machine shop work, railway shops, the manufacture of fertilizers, of cottonseed oil and cake, of coke, and of flour and grist mill products.

Transportation. Alabama is traversed by nearly all the trunk line railroads of the South. The Alabama and Tombigbee rivers, with their tributaries, furnish excellent facilities for navigation. The chief port is Mobile, at the mouth of the Alabama River. Mobile Bay, one of the largest and deepest harbors on the Gulf, is the outlet of the navigable waters of the State. Numerous steamship lines use the Mobile port in coastwise trade. Harbor improvements have increased the trade of the port considerably.

Defense. The 2,639 members of the National Guard comprise: one regiment infantry, two battalions of field artillery, one observation and one photo squadron, one motor transport company, one machine gun squadron, one veterinary company, two companies engineers, one ammunition train and one ambulance company.

History. The State derived its name from an Indian word meaning "place of rest." The first settlement was made by the French on Mobile Bay in 1702, and moved to the present site of the city of Mobile in 1711. In 1763 France ceded to England all the region east of the Mississippi, including what is now Alabama, except the southern part, which was claimed by Spain as a part of Florida. This portion remained in dispute until the War of 1812, when it was occupied by the United States. At the close of the Revolution the greater part of Alabama was included in the Territory of Georgia. In 1802 the latter ceded the western lands to the Government, and Alabama became a part of the Territory of Mississippi, from which it was separated in 1817.

On December 14, 1819, Alabama was admitted into the Union as the twenty-second State.

Places of Interest. In Alabama are many places made famous by historic happenings. At Athens, Campbell's Federals were captured by Forrest in 1864. At Burnt Corn Creek, the first engagement of the Creek War of 1813 took place. In this same war Jackson fought the Indians at Emuckfaw, and at Tohopeka took place the sanguinary battle of Horseshoe Bend. Many encounters took place in Alabama between Confederates and Union troops, as at Fort Morgan, Fort Gaines, and Girard.

The Fort Mims massacre occurred a short distance north of Mount Vernon in 1813. Montgomery, capital, on Alabama River, is a flourishing industrial center. Birmingham, largest city, is one of country's greatest iron and steel centers.

Citronelle is an attractive resort and sanitarium surrounded by the beautiful southern pine forests. At Bladon Springs are found noted alkaline mineral wells.

MISSISSIPPI

Area. The gross area of Mississippi is 46,865 square miles, of which 503 square miles are water surface. The State ranks thirty-first in size among the states of the Union.

Population.

Year	Population	Year	Population
1860	791,305	1900	1,551,270
1870	827,922	1910	1,797,114
1880	1,131,597	1920	1,790,618
1890	1,289,600		

Inhabitants are about evenly distributed over the State, the extreme southeastern counties, except the coast, being most sparsely settled. In 1920, only 13.4 per cent of the total number lived in cities of over 2,500 inhabitants.

The negro inhabitants, who make up over half the total, live in greatest numbers along the Mississippi River, especially in the Yazoo-Mississippi Delta.

Topography. The greater part of the State is a rolling to hilly portion of the Gulf Coastal Plain, rising almost imperceptibly from the coast to the north and east. The highest point in the State is at Iuka, 780 feet above sea-level. Most of the area lies between 100 and 500 feet. Along the Mississippi, in the northern two-thirds of the State, is an area of bottom lands called the Yazoo-Mississippi Delta, which is bounded on the east by a high, flat bluff, deeply cut by ravines. The Delta is extremely low, and requires levees to protect it from the Mississippi overflow. Along the coast lies a small portion of the Flatwoods section of the Coastal Plain, with a beach of white sand with small, shallow indentations, and a line of low, narrow, sand islands demarcating the outer limits of the shallow Mississippi Sound.

Climate. Toward the south the climate is mild and equable, extremes in temperature gradually increasing toward the north. On the coast the normal annual temperature is 67° Fahr.; on the northern border it is 61°. The extreme annual range on the coast is between 1° and 100°, while in the northeast it is between −11° and 105°. South of Natchez snow is seldom seen. The annual rainfall ranges between forty-nine inches in the north and fifty-four in the south.

Soils. The soils of the Yazoo-Mississippi Delta consist of alluvial soils immediately along the rivers and bayous. The soils a distance from the streams are generally heavier. The eastern ridge of the delta is covered by yellow and brown silty loams. The soils of the rest of the State are principally sandy loams, silty loams, and heavy clays. Immediately along the coast the soils are chiefly brown, black, mucky, or sandy loams. In the northeast is a belt of black, cretaceous prairie land. In general the soils toward the south are sandy, and those toward the north more or less mixed with lime.

Mineral Resources. The output of minerals in Mississippi is limited, though considerable quantities of clay, gypsum, hydraulic limestone, marl, phosphate, ocher, and glass sand occur. There are also small deposits of iron and coal, and in the Yazoo-Mississippi Delta small gas flows. Mineral waters are bottled and sold extensively.

Agriculture. The Yazoo-Mississippi Delta is one of the great cotton-producing regions of the world. Though the production is concentrated in this district, every county in the State produces cotton. The value of the crop, 1923, made up almost two-thirds of the total for all crops of the State. Other products are corn, sweet potatoes, yams, and vegetables, hay and forage, fruits and nuts, oats, dry peas, and peanuts. Dairying is becoming of great importance. Apples, peaches, pears, plums, apricots, grapes, melons, strawberries are grown, especially in west. In Gulf region, figs, olives, Satsuma oranges reach perfection. The "plantation" type of farm still prevails in the Delta and on the prairies, though appearances seem to indicate that it no longer exists. About 60 per cent of the farmers are negroes.

Forests and Forest Products. About one-third of the area of the State is wooded, forest products of farms being an important item of agricultural statistics. The principal timbers cut are yellow pine, oak, red gum, cottonwood, cypress, poplar, hickory, and ash. Much of the woodland has been exhausted, and the industry is declining. Pine stumps are now being utilized for the manufacture of charcoal, tar, creosote, and turpentine.

Fisheries. The fisheries are confined chiefly to the Gulf Coast, where large quantities of oysters and shrimps are obtained in the Mississippi Sound.

Manufactures. Though the manufactures do not take first place among the industries of the State, there has been a steady and continuous advance in the amount and value of manufactured products.

The great forests of Mississippi are the basis of the leading industry, the production of lumber and timber, which includes logging operations, sawmills, planing mills, and various woodworking plants manufacturing large quantities of barrel staves, heads, and hoops. Cotton textile mills are increasing.

Other important products are cottonseed oil and cake, cars and general shop construction and repairs by railway companies, cotton goods, fertilizers, turpentine, and resin. Progress in all these industries has been extraordinary since 1900. In the production of cottonseed oil and cake, Mississippi is one of the leading states of the Union.

Oyster canning and preserving is a growing industry.

Transportation. Facilities for transportation are excellent, connecting the agricultural and commercial centers with the great markets north, east, and west. The Mississippi River forms practically the entire western border, and gives direct communication with New Orleans for foreign and domestic shipments. Gulfport on the Gulf is an excellent shipping port, recent harbor improvements having benefited facilities greatly. Other rivers in the State are navigable to a limited extent.

Defense. In 1926 the 1,595 members of the National Guard comprised: a regiment of infantry, a battalion of engineers, a battery of field artillery, a motor transport company and a wagon train.

History. Hernando De Soto was the first European to set foot in the Mississippi region when he crossed the northeastern part of the present State on his way to the Mississippi River in 1541. In 1673, Joliet and Marquette sailed down the Mississippi to the mouth of the Arkansas, and French claims to the Mississippi Valley were formally made by La Salle in 1682, when he traversed the entire length of the Mississippi to its mouth. England also claimed the region by virtue of coast discoveries, and the present Mississippi State area was included in various English colonial grants.

After the French and Indian War, in 1763, however, all the territory east of the river except the Orleans island was ceded to England. After the Revolution it was ceded in turn to the United States with the exception of the Florida region, which then extended north on the Mississippi River to the thirty-first parallel, this part being called West Florida.

The first permanent settlement in the State was made by the French at Biloxi in 1699.

In 1798 the Mississippi Territory was organized north of the thirty-first parallel; and in 1804 the northern boundary was extended north to Tennessee. In the War of 1812, the United States seized West Florida, which was added to Mississippi; and by the Florida cession of 1819, Spain relinquished all claims.

In 1817 the Alabama Territory was erected, thus establishing the eastern boundary of Mississippi, and in the same year, Mississippi became a state with practically the present limits.

The State seceded in 1861, and several great battles were fought within the borders. After the war, Mississippi was made part of the Fourth Military District, and suffered much from the effects of reconstruction.

Places of Interest. There are several attractive watering places in Mississippi, such as Ocean Springs with its beautiful shell drive along an avenue of live oaks; Bay St. Louis; and Pass Christian, a favorite winter and summer place. Biloxi is the most popular of the resorts.

Among the famous battlefields and historic places are Baker's Creek, where Grant defeated the Confederates; Corinth, the scene of a victory by Rosecrans; Holly Springs, captured by the Confederates in December, 1862; Vicksburg, captured by Grant; Port Gibson; and Iuka.

Natchez is one of the oldest towns in the Mississippi Valley. The State University is located at Oxford. At Beauvoir is the Jefferson Davis Memorial Home for Confederate Veterans.

KENTUCKY

Area. Kentucky ranks thirty-sixth in size in the Union, with an area of 40,598 square miles. Water surface comprises 417 square miles, including the entire breadth of the Ohio River, over which Kentucky has jurisdiction.

Population.

Year	Population	Year	Population
1900	2,147,174	1920	2,416,630
1910	2,289,905		

The rural territory contains over 73 per cent of the inhabitants. Since 1900 the urban population has grown from 21.8 to 26.2 per cent of total in State.

Topography. The surface of Kentucky rises gradually from an altitude of about 300 feet along the Mississippi River to the western edge of the Appalachian Mountain province, in which parallel ridges of folded mountains, the Cumberland and the Pine, have crests in excess of 2,000 feet. The region west of the Tennessee is low, and broken only by creek and river valleys. This belongs to a part of the Coastal Plain Region along the Mississippi River. The central portion is rolling to undulating, being part of the westward slope of the Allegheny Mountain Region. The entire eastern part is much dissected. In the southeast is a mountainous region with small limestone valleys.

Climate. Kentucky possesses a somewhat milder and more even temperature than that of the neighboring states. The mean annual temperature, 50° on the mountains in the southeastern part, and 60° west of the Tennessee, is about 55° for the entire State. The thermometer seldom registers as high as 100° above or 10° below zero. The mean annual precipitation ranges from about 38 inches in the northwest to 50 inches in the south, and is approximately 45 inches for the entire State. It is usually distributed evenly throughout the year, and very little is in the form of snow.

Soils. The soil of Kentucky is well adapted to agriculture. The best soils are the alluvium in the bottom lands along the larger rivers, and that of the Blue Grass Region in the north central part. The latter is composed of heavy loams, clay loams, and stony loams, derived from the almost pure Silurian limestone. These soils have given that portion of the State its reputation for high fertility. In the south central part is a silty loam surface soil over the more gently sloping areas, and stony loams over the steeper slopes. This section comprises one of the great tobacco-growing regions of the United States. The extreme eastern portion of the State, being more rugged, is less suited to extensive agriculture. The more level tops of the plateaus, however, are cultivated, and the fine sandy and silty loams produce fair crops. Within the mountain section of southeastern Kentucky are a considerable number of small, very fertile limestone valleys.

Mineral Resources. The principal resources of Kentucky are bituminous coal, petroleum, natural gas, various clays, fluorspar, and limestone. Bituminous coal is the most important output (44,777,000 tons produced in 1923), Kentucky ranking fourth among the coal-producing States of the Union. Of cannel coal Kentucky is the largest producer in the country. Petroleum and gas rank second in importance. Valuable quarries have been found of an excellent light-colored oölitic limestone, resembling the Bedford limestone of Indiana, and known as the "Bowling Green stone." Sandstones good for structural purposes are found in the coal regions. Fire-clay, pottery clay, and cement rock also abound in the State. Other minerals are sand and gravel, zinc, lead, iron, barytes, and mineral waters.

Agriculture. More than half of the inhabitants of Kentucky are engaged in agriculture. Indian corn is the largest and most valuable crop. It is grown in all parts of the State, but most extensively in the western portion. Among the cereals wheat is the next crop of importance. It is grown both in the Blue Grass Region and farther west. In the eastern part of the State, where crops are generally light, Indian corn, oats, and potatoes are the principal products, but tobacco, flax, and cotton are also raised. The culture of tobacco, which is the second most valuable crop in the State, was begun in the northern part about 1780. Kentucky is far ahead of any other State in this product, both in acreage and yield. The two most important tobacco-growing districts are the Black Patch, in the extreme southwest corner of the State, where a black, heavy leaf is produced and sold largely to Central Europe, Spain and Italy; and the Blue Grass Region, with the hill country south and east, where the product, the red and white Burley, is a fine-fibered light leaf peculiarly absorbent of licorice and other adulterants used in the manufacture of chewing tobacco. Kentucky is the principal hemp-growing State in the Union. Fruits of fine quality are produced.

The live-stock industry is an important branch of agriculture in Kentucky, and large numbers of horses, sheep, cattle, and swine are raised. Kentucky has long been noted for its fine horses.

Forests and Forest Products. There are extensive forests of oak, maple, beech, walnut, ash, pine, and cedar. Oak and yellow poplar are the principal hardwoods cut for commercial purposes, and yellow pine the principal softwood.

Manufactures. The value of the manufactured products of Kentucky has been steadily increasing. The most distinctive of these associated with the State is distilled liquor, which was long the leading industry in the State in the value of its products. Among the great industries in Kentucky are also the flour mills and gristmills, the tobacco manufactures, and the manufacture of men's clothing. The lumber industry includes the logging plants, sawmills, and the various woodworking establishments, especially those making railroad ties, spokes, handles, barrel staves, and headings. Cotton goods are also important. Kentucky was one of the first states to engage in tobacco manufacturing on a factory basis. The factories are chiefly employed in making chewing and smoking tobacco and snuff. Other manufactures of importance are foundry and machine-shop products, iron and steel, slaughtering and meat-packing, railway shops, and printing and publishing.

Transportation. Kentucky's trade during the greater part of the nineteenth century was principally with the South, and, as a consequence of the good facilities afforded by river navigation, the building of railroad systems was retarded. After 1890, however, railways were in a considerable measure substituted for water craft. The greater part of the main lines run south or southwest from Cincinnati and Louisville. The mountainous east border of the State still has a small railway mileage and practically no wagon roads, most of the travel being on horseback. The wagon roads of the Blue Grass Region are excellent because of the plentiful and cheap supply of stone for road building.

Defense. The National Guard of 2,695 comprises one regiment each of infantry and field artillery, and other units.

History. The region now constituting Kentucky was originally a part of Fincastle County, Virginia. The first white men known to have discovered this territory were Marquette and Joliet in 1673. Shortly after 1760 Daniel Boone and his companions explored the region. The first settlement was at Harrodsburg in 1774. In 1775 Boonesborough was founded. For a long time Indian wars harassed the settlement. In 1775 a code of laws was formed by the settlers, but it was not recognized by Virginia. A year later, the district was organized as Kentucky County. In 1783 the three counties which had been formed since 1776 in Kentucky County were united into Kentucky District. In 1786 Virginia passed the first of four enabling acts giving conditional consent to the organization of Kentucky as a separate State. In 1792 Kentucky with its present boundaries was admitted to the Union.

Places of Interest. Kentucky contains many natural curiosities of unusual interest. Mammoth Cave has been the wonder and admiration of those who have traversed its beautiful subterranean passages. In extent and beauty it is almost equaled by the Colossal Cave. Both are located in Edmonson County. Natural Bridge, in Wolfe County, connects two portions of a chain of mountains, spanning a chasm sixty feet wide and forty feet high. Sinking Creek, in Breckinridge County, suddenly disappears and traverses an underground course for several miles and reappears as a great spring flowing from under a hill. In Ice Cave, Caldwell County, ice remains during the entire year. There are several Indian mounds in Anderson County. The Lover's Leap, near Clifton, is much visited.

At Lower Blue Lick and at Crab Orchard are noted mineral waters.

TENNESSEE

Area. The gross area of Tennessee is 42,022 square miles, of which 335 square miles are water surface. The State ranks thirty-fourth in size in the Union.

Population.

Year	Population	Year	Population
1880	1,542,359	1910	2,184,789
1890	1,767,518	1920	2,337,885
1900	2,020,616		

The population of Tennessee is still distinctly rural, though the urban population is increasing, while the rural, which increased slightly in the decade 1900–10, has declined in 1910–20. There are but two cities in Tennessee having more than 100,000 inhabitants: Memphis with about 162,500, and Nashville with over 118,000. Negroes make up 19.3 per cent of the population.

Topography. The State is divided into three separate topographical regions. Along the Mississippi is a low Gulf Coastal Plain region, the immediate river line lying in alluvial bottoms. A bluff 150 to 200 feet high rises from the bottoms to the Coastal plain, which is rolling and rising to a low ridge in the center and sloping down again to the Tennessee River. The central part, east of the Tennessee, consists of the Highland Rim, a rolling plateau cut by river valleys, and the Limestone Basin, an undulating to hilly region. From the Highland Rim rises the Cumberland Plateau, which overlooks the great Limestone Valley, a region full of parallel ridges and intervening vales. This valley is a continuation of the Great Valley of Virginia. In the extreme east along the border lie the Appalachian ranges full of high altitudes, sixteen peaks exceeding 6,000 feet.

Climate. The climate of Tennessee is exceptionally agreeable. The mean annual temperature ranges from 57° in the east to 60° in the western bottoms. The mean winter temperature is 38°, and that for the summer ranges from 62° in the east to 78° in the west. The annual average precipitation amounts to fifty inches. Violent storms are rare.

Soils. In the alluvial bottoms are heavy loams and clays. Stretches of silty loam are derived from the loess covering of western Tennessee. Along the Tennessee River are sandy and sandy loam soils. On the Highland Rim are gray silty loams, stony loams, and heavy clay loams. Brown loams, silty loams, and clay loams prevail in the Limestone Basin; and on the Cumberland Plateau, loams, silty loams, fine sandy loams, and stony loams derived from sandstone and shale rock. In the Great Limestone Valley are heavy brown loams, and clay loams, similar to those of the Limestone Basin in central Tennessee. The soils within the Appalachian region are like those of the Cumberland Plateau.

Mineral Resources. The mineral resources of Tennessee are of considerable importance. The coal fields have an area of about 4,400 square miles, and lie in the Cumberland Plateau region. Copper ore is found in the southeastern corner of the State, and iron ore in many scattered localities, though in largest quantities west of the Cumberland Plateau.

The products of the quarries are sandstone, marble, and limestone. In Eastern Tennessee, marble exists in almost inexhaustible quantities. Aluminum ore (bauxite) is mined, and some is reduced in the State. Other important minerals are phosphate rock, clay products, and zinc. Petroleum, natural gas, silver, gold, lead, manganese, barytes, and fluorspar are mined.

Agriculture. The acreage devoted to agriculture in Tennessee has remained about the same since 1850, or about 75 per cent of the total acreage of the State. The acreage of improved land, however, has about doubled since 1850. Considerable areas of the State are best suited to stock raising, and large numbers of swine, sheep, fine horses, mules, milk cows, and other neat cattle are raised. Dairy farming has had important development.

Over 45 per cent of the total value of crops in Tennessee is contributed by the cereals, one-fifth by cotton, and one-sixth by hay and forage. Large quantities of potatoes, vegetables, tobacco, sorghum, peas. fruits, and nuts make up the remainder.

Of the cereals, the corn crop is the leading product, contributing about four-fifths of the total cereal crop. Other cereals are wheat, oats, rye, barley, and buckwheat. Forest products on farms of Tennessee are important, woodlands of State covering about 27,300 square miles. Tobacco is raised chiefly along the western half of the northern boundary. In the Tennessee Valley, large quantities of peanuts are raised.

Cotton, which is the crop next in value to corn, though given considerably less acreage than hay and forage, produces a crop of considerably greater value than the latter.

Forests and Forest Products. The forests of Tennessee contain an abundant growth of some of the most valuable timbers produced in the United States. Lumbering is one of the older industries and is still important. In 1924, 658,888,000 feet were cut; and at this rate the stand would last about twenty-three years. The principal trees are oak, gum, yellow poplar and pine, hemlock, chestnut, cypress, ash, hickory, elm, and maple.

Manufactures. Preëminently an agricultural and mining state, the manufacturing industries are concerned chiefly with the resources of forest, farm, and mine. The lumber and timber industries rank among the leading establishments in output. Others of leading importance are the flour mill and gristmill products, foundry and machine-shop products, cottonseed oil and cake, cotton goods, iron and steel (blast furnaces and rolling mills), hosiery and knit goods, and fertilizers. Leather and tobacco manufactures and aluminum reduction plants are flourishing. Other industries common to all States, like printing and publishing, and railway car construction, are ranked among the leading producers in the State.

Important industrial cities are Memphis, Nashville, Chattanooga, Knoxville, and Jackson.

Transportation. Facilities for transportation and communication both by rail and water are excellent. The trunk lines of a number of large railway systems, several of which center at Memphis, afford direct connection with all parts of the country.

Navigable waterways are the Mississippi, the Tennessee, and the Cumberland rivers; and the great river ports are Chattanooga, Knoxville, Memphis, and Nashville. These three rivers are navigable throughout their entire lengths within the State.

Defense. The National Guard consists of a regiment of infantry, two battalions of field artillery, one company of engineers, and a motor-cycle, a collecting and a motor transport company, 2,506 men in all.

History. The first European to visit the region now included in the State of Tennessee was Hernando De Soto, when he reached the Mississippi near the present site of Memphis in 1541. In 1682 Father Marquette camped on the Tennessee bank of the Mississippi River; and, a short time after, La Salle built a fort where Memphis now stands. The English entered the region about 1748; but no permanent settlement was established before 1769, when some Englishmen settled on the Wautauga River.

During the Revolution, Tennessee settlers did valiant service for the Americans under the leadership of John Sevier; and a famous engagement was fought at King's Mountain, in which the backwoodsmen defeated the British regulars. After the war, immigration was rapid. The chief figure in the early history was James Robertson, a native of Virginia. As part of the Carolina grants of 1663 and 1665, Tennessee was ceded by North Carolina to the Federal Government in 1784. An attempt was made by the settlers to organize a state, calling it Franklin, but the administration was not recognized by the Federal Government. Finally in 1790, after the region had been ceded again by North Carolina, the territory south of the River Ohio was organized.

In 1796 a state constitution was drawn up, and Tennessee was admitted as a state.

Places of Interest. Tennessee was a great battleground of the Civil War. Some of the great battles fought on its soil were Shiloh, Murfreesboro, Franklin, and Chattanooga. Though the State voted to secede from the Union, a large section was strongly Unionist during the war. In Tennessee is the famous Cumberland Gap, where countless pioneers crossed the mountains in early days to settle in the Mississippi and Ohio Valleys.

Andrew Jackson's old home, "The Hermitage," is now a Confederate Soldiers' Home.

OHIO

Area. Ohio has a total area of 41,040 square miles, of which 300 square miles are water surface. The State ranks thirty-fifth in size among the states of the Union.

Population.

Year	Population	Year	Population
1860	2,339,511	1900	4,157,545
1870	2,665,260	1910	4,767,121
1880	3,198,062	1920	5,759,394
1890	3,672,329		

The increase in population during the decade from 1910 to 1920 was entirely taken up by the cities, the rural population decreasing considerably.

Topography. Ohio may be divided topographically into five main parts. The northern and northwestern portion is an old, almost completely level lake plain. The central and western portion consists of an elevated, undulating to rolling plateau land, the entire region covered with glacial drift and strewn with bowlders carried there by the ancient glaciers. Southeast and east is an unglaciated strip, deeply dissected by a network of valleys, and divided from the glaciated district by the terminal moraine, a deposit left by the glacier along its entire front and unmistakably marking the farthest extent of its advance. In the northeast is a gently rolling to hilly area, the border of the Appalachian Plateau. In the extreme southwest is a small loess-covered area on a thinly glaciated upland.

Climate. There is much uniformity in the temperature in all parts of Ohio. The north is several degrees colder than the south, but the proximity of Lake Erie has considerable influence in preventing great extremes in temperature. The mean annual temperature ranges from 49° in the north to 53.5° in the south. Rainfall is abundant over all the State, increasing slightly toward the north. In some years the precipitation is excessive, causing destructive floods along the Ohio and its tributaries.

Soils. The soils of the glaciated central and western plateau are yellow, brown, or gray loams, and clay loams. In the west-central portion, there are low tracts containing black, mucky soils. In the level glacial lake region, the soils are dark-colored and mucky loams, or clay loams over drab or blue clay. In this portion, toward the east, are sandy and gravelly ridges marking the ancient beaches. In the southwest is loess, a brown to yellow silty loam. Southeast and east in the unglaciated region the soils are formed from the weathering of the underlying shales and limestone. Many areas here are steep and stony.

Mineral Resources. The mineral resources of Ohio are extensive, and have aided much in the rapid progress of the State's industrial development. The coal fields cover an area of about 12,000 square miles, and about 50,000 miners are employed. There is considerable iron ore in the State, but the amount mined is small when compared with the vast quantities of ore brought in from the Lake Superior district to be converted into pig iron. The petroleum production in Ohio (1923) is large, about seven times more oil being produced than in Indiana; but it is less than one-twentieth of the output of Oklahoma. In the production of gas, Ohio is far in advance of Indiana. There are many sandstone and limestone quarries. Other products are salt, clay for pottery, brick and tile, glass sand, lime, grindstones, pulpstones, oilstones, scythestones, and mineral waters. Materials for the manufacture of Portland cement are found in large quantities.

Agriculture. Of Ohio's entire land area, more than nine-tenths is in farms. The highest values are found in the west and north. In the period from 1900 to 1920, there has been a retrogression in the extent of farm acreage, accompanied by a decrease in rural population.

Ohio is one of the leading cereal states of the Union. Over three-fifths of the total value of crops in the State is contributed by the cereals, over one-fifth by hay and forage, and about one-fourteenth by potatoes and other vegetables. The remainder is largely made up by tobacco, sugar beets, sorghum, maple sugar, fruits, and nuts.

The corn crop leads the cereals in quantity. Others are wheat, oats, rye, barley, and buckwheat. The tobacco crop is particularly large, amounting to nearly 42,770,000 pounds in 1923, valued at $6,159,000. Timothy is the leading hay crop.

Stock-raising is an important branch of agriculture in Ohio, and great attention is paid to pure-bred stock of horses, dairy cattle, sheep, and swine.

Forests and Forest Products. Ohio was once entirely covered with a dense hardwood forest. Most of this has been cut away to satisfy commercial demands. Of the trees remaining, the white oak is most common. Those now being cut are chiefly oak, walnut, beech, maple, yellow poplar, elm, ash, hickory, basswood, and sycamore.

Manufactures. Ohio is a State of exceptional industrial prominence. This is mainly due to the many natural resources, particularly the agricultural richness, supplemented by abundant supplies of fuel, coal, gas, oil, and hardwood lumber, and excellent lake transportation. Since 1879 the State has ranked about fifth in value of manufactured products in the Union. It was third in 1923.

The leading industrial products of Ohio are iron and steel, foundry and machine shop products, coke, refined oil, flour and grist, meat, automobiles, lumber, shoes, safes and vaults, cash registers, tobacco products, and railway cars. One of the typical industries of the State is the making of pottery, brick, tile, porcelain, and glass.

The list of manufactures is one of wide diversity, including fully three-fourths of the classification used in the compilation of statistics for the United States. Great gains have been made since 1900 in the iron and steel industry.

The great industrial cities of Ohio are Cleveland, Akron, Cincinnati, Toledo, Youngstown, Columbus, Dayton, Canton, Lorain, Springfield, Middletown, Norwood, Hamilton, Portsmouth. Alliance, Mansfield, Steubenville, Barberton, Elyria, Lima, and Ashtabula.

Transportation. Ohio is splendidly furnished with transportation facilities. Railroads are well developed, many of the great transcontinental lines traversing the State. Ohio is third in the Union in electric railway mileage. Two canals within the State, one from Cleveland to Portsmouth, and the other from Toledo to Cincinnati, connect Lake Erie and the Ohio. The leading lake ports are Cleveland, Conneaut, Ashtabula, and Toledo, and the great river port is Cincinnati; the value of foreign and domestic commerce passing through these ports is enormous and annually increasing.

The Lincoln Highway, the great sea-to-sea road designed to serve as a monument to Abraham Lincoln, crosses the State from Beaver Falls, Pennsylvania, through or near Canton, Mansfield, Bucyrus, Lima, and Van Wert, to Fort Wayne, Indiana, a total distance of 313.6 miles.

Defense. The National Guard of 8,193 men, includes the 37th Division in addition to a regiment of cavalry and one of colored infantry.

History. The State takes its name from Ohionhiio or "beautiful river," the name the Indians applied to the great river forming the State's southern and southeastern border.

About 1670, La Salle discovered the Ohio River, and followed its course as far as the Louisville Rapids. In 1679 he sailed along the shore of Ohio on Lake Erie, on his way to the Mississippi Valley. The region remained under the control of the French until after the French and Indian War, when it fell into the hands of the English. During the Revolution, George Rogers Clark took possession of the land as far west as the Mississippi River, for the United States. This region was first organized as a county of Virginia. In 1786 the Northwest Territory was formed, including most of Ohio, Indiana, Michigan, Illinois, Wisconsin, and a part of Minnesota. The first permanent settlement within the State was at Marietta, in 1788, by colonists from Massachusetts. Later in the same year, another settlement was made at Losantiville, now Cincinnati. In 1800 the greater part of Northwest Territory, except Ohio, was organized as Indiana Territory. In 1802 the present boundaries of Ohio were fixed, with the exception of the northern, which was settled in 1836. On February 19, 1803, Ohio entered the Union.

Points of Interest. At Circleville, Portsmouth, and Chillicothe are some interesting prehistoric mounds or fortifications left by the so-called mound-builders. At Dayton is a National Soldiers' Home. Marietta is of historic interest as the oldest town in Ohio. William Dean Howells was born in Martins Ferry.

TO COMMEMORATE OUR HONORED DEAD

Rising to a height of over 284 feet in the center of the city of Indianapolis, and crowned by a statue of Victory thirty-eight feet high, is a worthy memorial erected by the state to its soldiers and sailors. Stone groups of Peace and War adorn the east and west faces of the monument's base, whose fountains are among the greatest in the world, having a capacity of 20,000 gallons per minute.

The Hoosier State has in one of its central-southern counties a remarkable natural feature, the Wyandotte Cave, only exceeded in size in the United States by the Mammoth Cave of Kentucky. In this region there abound also mineral springs, the most notable of which are French Lick and West Baden, the Mecca of health-seekers.

Indiana and Ohio alike have an undulating prairie surface, but in the latter state there is a gradual merging into the Alleghany Plateau. Ohio has every reason to be proud of her cities. Cleveland has been universally named the Forest City because of the wealth of its trees, which overarch the streets and aid in making Euclid Avenue one of the most beautiful residence thoroughfares in America. The great tower of Ohio sandstone, 165 feet in height, commemorating James A. Garfield, is a conspicuous and commanding feature of Lake View Cemetery. In its base is a chapel containing a statue of the martyred President, and a number of panels portraying various scenes in his career. A crypt below the statue incloses his remains, reverently consigned to their last resting place in his beloved home state.

Until 1800 Indiana was a part of Ohio, and these two states are great highways of travel between the commercial centers of the East and the bustling cities of the Mississippi Valley and the West. Not by rail alone is connection possible, but the waters of Lake Erie and of the treacherous Ohio River are busy channels of communication, while the Wabash River, whose headwaters are in Ohio, forms the major portion of the boundary between Indiana and Illinois.

Ohio is the birthplace of seven of the Presidents of the United States, while William Henry Harrison, the ninth national executive and the first to be elected from the Buckeye State, during the War of 1812 was the means of preventing this state's occupation by the British. The fertile soil of the state is her most enduring source of wealth, while her natural beauties are many, particularly along the Little Miami, a tributary of the Ohio River. Clifton Glen in the Gorge of the Little Miami is a well known beauty spot, while the entire valley watered by this stream is refreshed and benefited by its flow. Ohio, the pioneer state of the old Northwest Territory, was nicknamed from its species of horse chestnut tree, the buckeye.

GARFIELD MEMORIAL, CLEVELAND

INDIANA

Area. The gross area of Indiana is 36,354 square miles, of which 309 square miles are water surface. Indiana ranks thirty-seventh in size among the states of the Union.

Population.

Year	Population	Year	Population
1890	2,192,404	1910	2,700,876
1900	2,516,462	1920	2,930,390

The inhabitants of Indiana are about evenly distributed between farmlands and cities, the urban population, 1920, being 50.6 per cent of the total; and a comparison of United States census reports shows a steady drift of population toward the cities.

Topography. The greater part of the surface of Indiana is undulating to rolling prairie land. Toward the north lies a range of sand hills; and in the southern region, in the counties along the Ohio River, is a picturesque chain of rocky hills called the "Knobs," some of which rise to a height of 500 feet.

Climate. The mean annual temperature is about 52° Fahr., varying from 49° in the north to 54° in the south. The mean monthly temperature ranges from 25° in December and January, to 77°—79° in July and August. The climate is unusually equable, except for occasional winter winds from the Great Lakes region, which send the temperature down sometimes as low as 25° below zero. The mean annual rainfall varies from 35 inches in the north to 46 inches in the Ohio Valley.

Soils. The greater part of the State is covered to a considerable depth with a drift deposit of yellow, brown, or gray loams, and clay loams, extremely fertile, and well adapted to the production of the staple crops of the region. Immediately southeast of Lake Michigan is a sandy and swampy region of little natural fertility and with extensive areas of peat and muck. When drained and cultivated, however, these soils constitute productive areas. In the lower two-fifths of the State is a thin deposit of a yellow, silty soil known as loess. This is better adapted for winter wheat, oats, and grass than for Indian corn, although there are no well-defined crop bands in the State. Tobacco is grown chiefly in this loess region, and in the uplands along the Ohio boundary.

Mineral Resources. A large part of the State of Indiana has experienced the sudden access of prosperity induced by the discovery of rich mineral resources, and the resultant reaction when such resources begin to decline in abundance. In 1886, natural gas was discovered in the east-central part of the State. Great industrial and commercial activity followed, but in the fever of discovery, an enormous quantity of gas was wasted. The output is now rapidly declining.

The development of a petroleum field followed the discovery of gas. Production increased until 1904. Since then it has declined, the output, 1923, being 1,034,000 barrels.

In the production of coal, Indiana normally ranks sixth in the Union. The field lies in the west and southwest portions, and the fuel produced goes far toward making up the deficit caused by the exhaustion of gas and petroleum. Other important and more stable products are pottery clay, Portland cement, building stone (notably the famous Bedford limestone), gravel, and mineral waters.

Agriculture. According to the United States Census report for 1920, over nine-tenths of the land area of Indiana is in farms. The principal crops are Indian corn, wheat, hay and forage, oats, vegetables, rye, barley, and tobacco. Large quantities of tomatoes are raised, and fruits and vegetables of all sorts are important products. The proximity of great markets and the excellent transportation facilities have brought about an agricultural advance comparing with that of the great States west of the Mississippi.

Stock-raising is an important agricultural industry, and swine and sheep are raised in vast numbers. Pigs number about 3,880,000. Horses and milk cows are also numerous.

Forests and Forest Products. The forests of Indiana were originally extensive, and as late as 1880 the State was an important timber region. Reckless cutting has denuded most of the forest land. The principal cuts at present are oak, beech, maple, elm, yellow poplar, basswood, ash, hickory, walnut, and sycamore.

Manufactures. The great natural resources of the State have caused an enormous growth in the value of manufactures. Since the falling-off in abundance of certain fuels, the growth has been materially checked, particularly of those industries depending on oil and gas. The abundant supply of other fuels, however, has prevented a serious decline, and, as a whole, manufacturing industries continue to flourish.

The most important manufactures are slaughtering and meat-packing plants, iron and steel mills, tinplate mills, cement mills, flour mills, automobile and carriage plants, oil refining, glass works, agricultural implements, and clay products. A great industrial region has grown up around the lower end of Lake Michigan. The leading industrial cities are Indianapolis, East Chicago, Whiting, Fort Wayne, South Bend, Evansville, Hammond, Terre Haute, Anderson, Kokomo, Michigan City, Muncie, Mishawaka, Marion, Elkhart.

Transportation. Indiana is particularly well favored with means of transportation and communication. All the lines from the east to Chicago, and nearly all the great transcontinental systems, traverse Indiana, in addition to numerous north and south lines. This intricate network is further complicated by an extensive system of interurban electric lines, which radiate from Indianapolis as a center with the largest interurban railway traffic in the United States.

Facilities for water transportation are fairly good. There are improved harbors at Indiana Harbor, Michigan City, and Gary on Lake Michigan, and the Ohio and Wabash rivers furnish an outlet on the south.

Recent agitation has brought about considerable activity in the improvement of roads.

The Lincoln Highway passes within the boundaries of Indiana, from Fort Wayne, through or near Ligonier, Elkhart, South Bend, Laporte, Valparaiso, and Dyer, to Chicago Heights, Illinois.

Defense. The National Guard of Indiana, which included 349 officers and 4,375 enlisted men in 1925, consists of one brigade of infantry, two regiments of field artillery, one regiment of engineers, and a medical regiment. During the Civil War, the State put into the field 208,000 officers and men for the Union, and a home legion of 50,000 men to protect the State from invasion.

History. The region now called Indiana was first explored about 1670, by La Salle. Nearly sixty-five years later the first permanent settlement was made at Vincennes by a number of French families. With the establishment of a few forts, the region remained under the control of the French until after the French and Indian War, when it was surrendered to the English. During the Revolution, Americans under George Rogers Clark captured Vincennes and Kaskaskia for the Colonies; and in 1783, all the territory east of the Mississippi and north of Florida was ceded by England to the United States. The first American settlement in Indiana was made at Clarksville opposite Louisville in 1784. In 1800, the Territory of Indiana was created, including nearly all of present Indiana, Illinois, Wisconsin, northeastern Minnesota, and western Michigan. In 1802 the Ohio boundary was fixed. In 1805 the Michigan and in 1809 the Illinois Territories were organized, leaving Indiana with its present limits. In December, 1816, the State was admitted to the Union.

Places of Interest. Mineral water springs are the nuclei of famous resorts at French Lick and West Baden.

In the sandstone and limestone region of the south are numerous caves, the most famous being the Wyandotte Cave in Crawford County, next to the Mammoth in Kentucky, the largest cave in the United States.

In the outskirts of the city of Marion is a large National Military Home surrounded by beautiful grounds. Gary is a great industrial city built by the United States Steel Corporation on the waste sands south of Lake Michigan, with huge steel mills and coke ovens.

Among the health resorts are Martinsville, with noted artesian mineral wells; West Baden, with several different mineral waters; Winona Lake, where a famous summer school and assembly are held; and French Lick, formerly an old "buffalo lick."

On the Tippecanoe River in Indiana occurred Harrison's victory over the Indians in 1811.

The State is creating a large park on the shore of Lake Michigan which will include many of the famous sand dunes.

MICHIGAN

Area. Michigan ranks twenty-second in size among the states of the Union. The total area is 57,980 square miles, of which 500 square miles are water surface.

Population.

Year	Population	Year	Population
1900	2,420,982	1920	3,668,412
1910	2,810,173		

There has been a considerable increase in the proportion of urban population, and a corresponding decrease in the proportion of population in rural territory, within the last decade.

Topography. The surface of Michigan presents a great variety of physical features. It has mountains, bluffs, hills, high tablelands, rolling prairies, forests, plains, marshes, great sand dunes, rocky shores, and many islands. The north part of the lower peninsula is occupied by a plateau of considerable dimensions, and the northwest part of the upper peninsula is rugged, with hills and mountains. Crossing the lower peninsula from Saginaw Bay west by south is a depression in which the elevations for a considerable area are less than 100 feet above the lakes. To the southwest of this depression is a water-parting, with summits varying from about 400 to 600 feet above the lakes. West of the divide and south of the depression, southwest Michigan is occupied by the valleys of the St. Joseph, Kalamazoo, and Grand rivers, by gently rolling uplands, and by sand dunes, some of which rise to the height of from 100 to 200 feet. The surface of the upper peninsula is more irregular than that of the lower peninsula. Eastward from Green Bay are two ranges of hills, one from 100 to 300 feet in height, the other reaching in places an elevation of 600 feet above Lake Superior. Some of the mountain-peaks in the northwest rise to 2,000 feet or more.

Climate. The temperature of the entire lower peninsula is considerably influenced by the Great Lakes. The prevailing winds in winter being west and northwest, it is in the western part that the moderation is greatest. Both the summer and winter isotherms are there deflected more than half the length of the peninsula. The prevailing winds of the upper peninsula being northwesterly, the lakes have little effect on the temperature there. While the extremes are not great in the southwest, in the rest of the State they have ranged from 104° at points in the southeast to 24° below zero in the northwest. The mean annual temperature is about 45°. The annual precipitation is about thirty-one inches, which falls during the growing months, from May to October. The rain is evenly distributed over all parts of the State, but the snow is exceptionally heavy along the north shore of the upper peninsula.

Soils. Glacial deposits, ranging from a few feet to 200 or 300 feet in thickness, cover the greater part of the southern peninsula. The northern peninsula has less glacial deposit. For the most part the soil of southwest and southeast Michigan is a dark clay loam, or muck. In the north-central part of the lower peninsula, it is a light, sandy loam; along the shore of Lake Huron, it is heavy with blue clay; in the mining districts of the northwest, the rocks are usually either barren or very thinly covered. Elsewhere in the State the soil is generally rich in a variety of mineral and organic elements, and varies chiefly in the proportions of vegetable loam, sand, gravel, and clay.

Mineral Resources. Iron, copper, and cement, in the order named, are the three principal mineral products of the State. Fields of bituminous coal extend over an area of about 10,000 square miles, but its quality is inferior. Michigan is exceeded only by Minnesota in the value of its output of iron ore, and by Arizona and Montana in the value of its copper product. Salt wells are numerous in the middle and southeast sections of the lower peninsula, and gypsum is obtained from deposits along the banks of the Grand River in Kent County. Other minerals occurring in the State are marl, limestone, sandstone, petroleum, natural gas, graphite, asbestos, potash, mineral waters.

Agriculture. The soil and climate of Michigan are adapted to the cultivation of all cereals and fruits of the temperate zone. Corn, wheat, oats, barley, rye, and buckwheat are the principal cereals. Barley and buckwheat are grown chiefly in the eastern portion of the lower peninsula. Hay and forage comprise a large proportion of the acreage of all crops. State ranked third in beet sugar in 1923 Potatoes are grown in large quantities in the northwest part of the lower peninsula, as well as throughout the southern portion of the State. Beans are one of the important products.

All the principal fruits are grown in largest quantities in what is commonly known as the fruit belt, in the southwest part. Apples contribute about four-fifths of the total quantity of orchard fruits; peaches, pears, cherries, most of the remainder. Every variety of pear, plum, and cherry can be successfully grown upon nearly every farm. Grapes do well on the hillsides everywhere. Berries of all kinds are produced in large quantities.

Manufactures. For many years Michigan has been one of the leading manufacturing states of the Union. This has largely been due to the utilization of its extensive forests, while the increasing markets afforded by the rapidly developing West, the advantageous location in relation to the markets of both the East and the West, and the State's important agricultural and mineral resources, have been influential factors in its later progress. The most important industries are the manufacture of automobiles, including bodies and parts, lumber and timber products, and foundry and machine-shop products. In the long and varied list of industries of Michigan, many establishments common to most states are here of considerable importance.

Transportation. The transportation facilities of the State, both by rail and by water, are excellent. It has approximately 8,685 miles of steam railroads and 1,817 miles of electric roads. In addition to good railway communication, Michigan has a coast-line of about 1,600 miles, along which vessels of 2,000 tons can sail and find access to nearly twenty good harbors. From these harbors its products are transported to the harbors of seven of the leading states in the Union and of the Dominion of Canada. Water communication has been extended and improved by several canals, among which are two at Sault Ste. Marie, which pass the rapids of St. Mary's River, the St. Clair Flats at the north end of Lake St. Clair, where a deeper channel is made through shallow water, and the Portage Lake Canal, in the copper district, connecting the lake with Lake Superior.

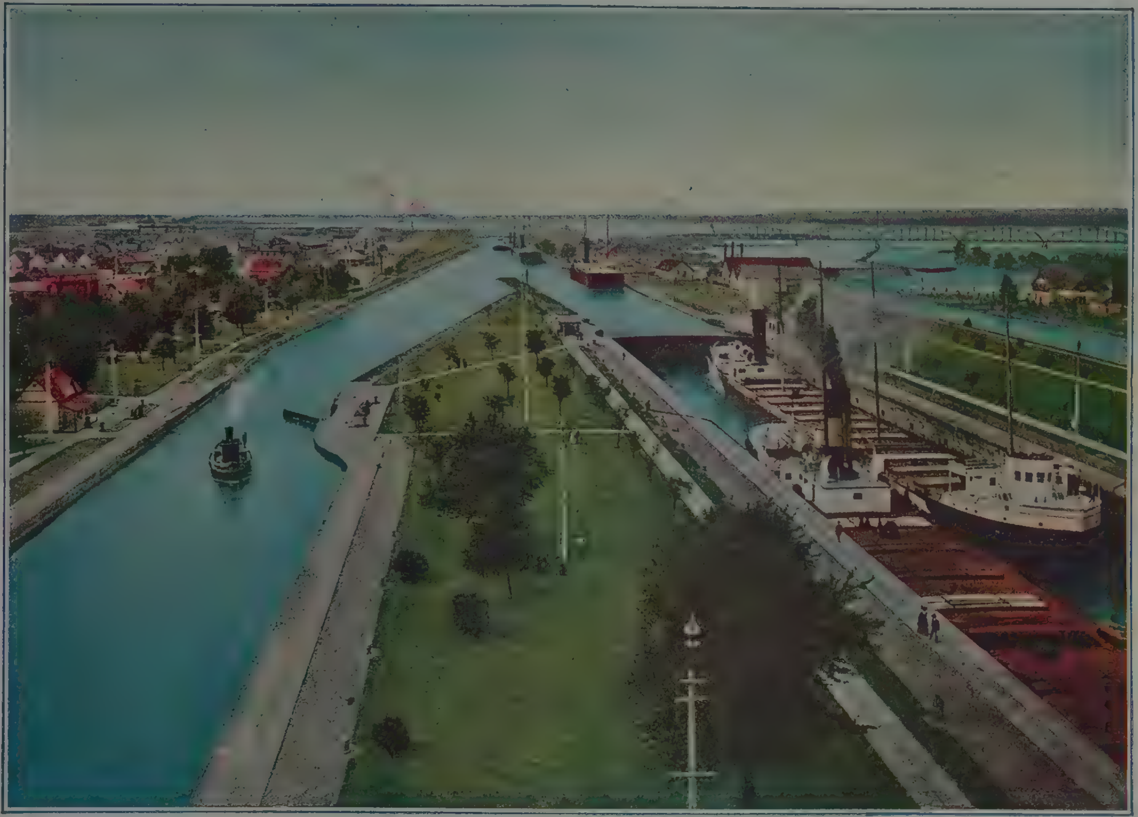
Defense. The National Guard of Michigan consisted, in 1925, of 4,288 enlisted men, organized as one brigade of infantry, a regiment of field artillery, a medical regiment, one squadron of cavalry and a regiment of field artillery.

History. The word Michigan is of Indian origin, probably signifying "great lake" or "great water." In 1634, Jean Nicollet, a French explorer, discovered Lake Michigan. In 1668 at Sault Ste. Marie, Father Marquette and others founded a mission. In 1701 Antoine de la Motte-Cadillac, under a commission from Louis XIV of France, founded Detroit. The region was transferred to the English in 1763, and in 1783 it passed into the hands of the United States. In 1800, when the Territory of Indiana was created, the western part of what is now the lower peninsula of Michigan and most of the upper peninsula were made a part of the territory. Two years later the remaining portions of both peninsulas were added to Indiana, and in 1805 the lower peninsula and the eastern part of the upper peninsula were organized as the Territory of Michigan. A state constitution was adopted in 1835.

In 1837 the boundary with Ohio was settled, the upper peninsula was given to Michigan, and, on January 26, the State with its present boundaries was admitted to the Union.

Places of Interest. Michigan is a state of summer resorts. Mackinac Island is famous for its picturesque and beautiful scenery. On this island were fought two battles of the war of 1812. Here Schoolcraft wrote his "History of the North American Indians" and "The Legend of Hiawatha," which Longfellow expanded into a poem. On the edge of a perpendicular precipice, 155 feet high, is the old fort. Arch Rock is one of the greatest freaks of nature's handiwork. The pictured rocks, extending east from Munising Harbor, are one of the scenic wonders of the world. Other Michigan resorts are numerous and popular, especially in the south—Battle Creek, famous for its sanitariums and health foods; Mount Clemens, the "Bath City"; Ypsilanti, Alma, St. Joseph, Benton Harbor, South Haven, and Ottawa Beach. Petoskey and the surrounding region is the health resort for thousands annually. Noted mineral wells are located at St. Louis and Midland.

IN THE GREAT LAKES COUNTRY



THE LOCKS AT SAULT STE. MARIE, MICHIGAN

Copyright, Detroit Photographic Co.

Between the two sections of Michigan extends a great highway of travel from east to west. The state itself is a vast pleasure ground, with Mackinac Island as a convenient halfway house. Large and small game abounds in the north, and here also are innumerable lakes containing an abundance of delicious fish. The state is, therefore, a favorite resort of sportsmen and lovers of the out of doors.

The picturesque cliffs that form the irregular, rockbound shores of Lake Superior have many natural beauties. About forty-five miles from Marquette rise the 300-foot sandstone bluffs called the Pictured Rocks, which the ice and storm kings have chiseled into most fantastic shapes. In weather fair enough to permit a steamer to approach the dangerous shore, these bluffs, five miles long and of the most brilliant hues, may be viewed from the lake. Cascades rippling over the formations here and there enhance their beauty. They are best viewed from Munising, the site of the wigwam of Nokomis, in Longfellow's memorable legend of Hiawatha.

The St. Mary's River and Rapids, connecting Lakes Superior and Huron, are noted for the charm of their surrounding scenery. A ship canal, which permits large vessels to pass these rapids, leads to Sault Ste. Marie. Here gigantic locks were constructed by the government, and through them passes more commerce than is cared for by any other canal in the world, including even the busy Suez Canal. The St. Mary's River falls twenty feet in three quarters of a mile, and the necessity of locks to overcome the difference in level is easily seen.

Chicago, the great city at the foot of Lake Michigan, is itself a summer resort of no little fame. On the lake front stands the new building given and endowed by the late Marshall Field to house the collections of the Field Museum of Natural History. Soldiers' Field, designed as a war memorial, is a municipal stadium built of cast stone, with a seating capacity of 100,000. The architecture of the new stadium is in harmony with that of the museum, and together they form a magnificent unit in Chicago's front yard.

Chicago's influence as a commercial and industrial center has long been felt in every corner of the world. But with her many majestic new buildings, and with the completion of the extensive improvements now being carried out along her many miles of shore line, the city is earning a new title to fame. Chicago of the future promises to be one of the most beautiful cities in the world, as well as one of the busiest and most prosperous.

FIELD MUSEUM OF NATURAL HISTORY AND SOLDIERS' FIELD, ON CHICAGO'S LAKE FRONT

ILLINOIS

Area. Illinois ranks twenty-third in size among the states of the Union, with a gross area of 56,665 square miles. Water surface comprises 622 square miles.

Population.

Year	Population	Year	Population
1870	2,539,891	1900	4,821,550
1880	3,077,871	1910	5,638,591
1890	3,826,352	1920	6,485,280

The city of Chicago contains nearly 42 per cent of the population of the State. In general, urban districts are increasing in population, and the rural districts decreasing.

Topography. Illinois is a broad plain lying in the low plateau region constituting the upper portion of the Mississippi Basin. The northern and east central portions consist of an undulating and ridged upland, intersected by deep stream channels. The southern end of the State is more level, with slight elevations along the Mississippi and the Wabash rivers. From the alluvial bottoms at the junction of the Mississippi and Ohio rivers, where the elevation is approximately 300 feet, the plateau rises northward, attaining an altitude slightly in excess of 1,000 feet at the extreme northern and northwestern limits. River bluffs frequently rise to an unusual height, particularly north along the Illinois River.

Climate. The climate of Illinois is far removed from the modifying influence of the sea and the mountains. It is materially affected, however, by the trade winds that blow from the Gulf of Mexico. The mean annual temperature of the entire State is 50.65°, ranging from 47° at the northern boundary to 58° at the southern extremity. The mean annual precipitation diminishes northward, ranging from thirty-nine inches in the south to thirty-four inches in the north.

Soils. Except in the extreme northwestern portion and in the southern counties, the surface of the State has been glaciated one or more times. The glaciated plateau regions in the east and north are covered with brown to almost black loams and silt loams, the stream channels bordered generally by alluvial soils. In the west and west central portions, the upland is covered by a deep layer of brown or yellow silty loam known as loess. The southeastern part is chiefly occupied by a covering of gray or ash-colored loess-like material of shallow depth. All the soils are rich and well adapted to the raising of the staple crops of the climate.

Mineral Resources. Illinois ranks about fifth among the States in value of mineral products. There is a great variety of deposits, the most important of which is coal, the fields covering about two-thirds of the total area. There are more counties producing coal in Illinois than in any other State. The manufacturing industries of Illinois have been developed and maintained by the great coal resources within its borders. The local markets are supplied, and the producers are enabled to obtain higher prices than those secured for the superior grades from West Virginia. Oil and gas were discovered in Clark County in 1865. They are now found chiefly in southeastern part of State. Deposits of zinc and lead are very productive. Large quantities of glass sand are obtained in La Salle County, and the quarries of the State produce large amounts of limestone, sandstone, and clays. Fluorspar is another important mineral product of Illinois.

Agriculture. A large proportion of the State is topographically suited to the best forms of agriculture. The great variety and fertility of the soils, the wide range of climatic conditions, and the favorable location with respect to transportation and proximity to markets, have made possible a diversified and profitable agriculture. Illinois is one of the foremost agricultural states in the Union. The cereals contribute about four-fifths of the total value of crops; hay and forage, about one-eighth; and potatoes, vegetables, flowers, plants, and nursery products, most of the remainder. Illinois ranks third in the value of its farm products, and ranks second in farm acreage values. In corn and oats, 1923, it ranked next to Iowa; in wheat, next to Kansas. Apples, grown chiefly in southern Illinois, are the principal orchard crop.

Forests. The forest lands of Illinois are chiefly in the southern counties. Sycamore, walnut, tupelo, yellow poplar and pine, beech, cedar, cottonwood, oak, ash, elm, maple, locust, hickory, and sweet gum are cut; but mill supplies are largely imported from the northern Lake, Southern, and Western States.

Manufactures. Illinois is the second most important manufacturing State west of the Alleghenies, ranking next after New York, Pennsylvania, and Ohio. Value of output, 1923, $5,041,113,000. The State leads all others in slaughtering and meat-packing products, and in the manufacture of agricultural implements. Other leading articles are iron and steel and their products, foundry and machine shop products, canned vegetables, electrical equipment, woodenware, furniture, plumbers' and steamfitters' goods, vehicles, flour, woolens, lumber and planing mill products, cement, clay products, glassware, soap, sugar, sirup, starch, fertilizers, etc. Industrial centers are well scattered—Chicago, Peoria, East St. Louis, Joliet, Rockford, Moline, Waukegan, Cicero, Chicago Heights, Decatur.

Transportation. Illinois owes its importance as a commercial center to its excellent transportation facilities. In addition to 12,160 miles of railroad, and about 3,416 miles of electric lines, it has 450 miles of canals, and the advantages of cheap transportation by way of the Great Lakes and the Mississippi and its tributaries. A large fleet of steamers carries iron ore, cereals, etc., to and from Chicago, which is one of the two ports of entry in the State, and is the most important collecting and distributing center in the Middle West. Chicago is the world's greatest railroad center.

The "good roads effort" in recent years has done much toward establishing excellent roads over the State, and Illinois ranks among the first of the States in the matter of hard roads. The monumental Lincoln Highway crosses the State from Indiana, passing through Chicago Heights, Joliet, Aurora, Geneva, DeKalb, Rochelle, Ashton, Franklin Grove, Dixon, Sterling, Morrison, and Fulton to the Mississippi, and to Clinton, Iowa. The distance traversed from Chicago Heights, Illinois, to Clinton, Iowa, by the Lincoln road is about 154½ miles.

Defense. The Illinois National Guard, November 30, 1925, had 571 officers and 8,233 enlisted men. The organization included the entire 33rd Division in addition to one regiment of colored infantry, a squadron of cavalry, a battalion of field artillery, and a regiment of anti-aircraft artillery.

In the War of 1812, Illinois was represented by four companies of mounted rangers, who were sent to protect the frontiers from the Indians. About 2,000 men took part in the Black Hawk War. The State's quota in the Mexican War was six regiments. In the Civil War, Governor Yates sent to the front 259,000 men. With the exception of New York and Ohio, no other State furnished a larger number.

History. In 1675, Jacques Marquette, a French missionary, founded a Jesuit mission at the Indian town of Kaskaskia, near the present city of Utica. Three years later, La Salle entered the region with an exploring party, naming the Illinois River from the Indian word Illini, meaning "man." In 1700 the first permanent settlement in the State was made at Kaskaskia, by the French. Other settlements at Cahokia and Fort Chartres were made about 1720. In 1763, after the French and Indian War, the region was ceded to the English by the French; but the English did not take possession of Fort Chartres and the surrounding territory until 1765. It remained in the possession of the English until the close of the Revolutionary War, when in 1783 all the territory passed to the United States.

After the Ordinance of 1787, the Northwest Territory was organized; in 1800, the Indiana Territory, including Illinois; and finally, in 1809, the Illinois Territory, with the present state boundaries. Illinois was admitted as a State in 1818. The first constitution was adopted the same year. In 1772 the seat of government had been moved from Fort Chartres to Kaskaskia. In 1837 Springfield was made the capital.

Places of Interest. Chicago offers all the attractions of a great city, the second in the Union. It is the greatest railroad center and grain and live-stock market in the world. Springfield, the capital, is a beautiful city, with historic interest as the home of Lincoln, and containing his tomb and a great monument. At Urbana is the University of Illinois. Elgin is the largest butter market in the United States, and has a world-famous watch factory.

WISCONSIN

Area. The gross area of Wisconsin is 56,066 square miles, ranking twenty-fifth in size among the states of the Union. Water surface comprises 810 square miles.

Population.

Year	Population	Year	Population
1860	775,881	1900	2,069,042
1870	1,054,670	1910	2,333,860
1880	1,315,497	1920	2,632,067
1890	1,693,330		

The greatest density of population, 1920, is toward the southeast, Milwaukee County, containing the city of Milwaukee, having the highest, and Vilas County the lowest. Rural population is still in the majority, but growing less rapidly than urban.

Topography. The surface topography of the small unglaciated region in the southwestern part of the State is somewhat rough and dissected; but the rest of the State, which has been subjected to heavy glaciation, is a rolling to nearly level plateau region. Sandy terraces extend along the larger streams, and along the edge of the glaciated region. In the north are many stony ridges and areas of porous sand. The highest points in the State are residual masses of relatively resistant rock in the north.

The lowest elevations in the State are to be found along the eastern and northern limits on the shores of Lakes Michigan and Superior. The surface rises gradually from 600 feet at Lake Michigan, to 1,500 feet in the rocky heights adjacent to the boundary with northern Michigan. Highest peak in State, Rib Hill, 1,940 feet.

Climate. The climate of Wisconsin is characterized by long, cold winters, and short, warm summers. The temperature, however, varies greatly in range between the northern and the southern portions. The Great Lakes modify the climate somewhat, but the effect is felt only a little way inland. The mean annual temperature for the State is 43.3° Fahr. The extremes recorded in the State were 111° in the extreme south, and –48° in the north.

Rainfall is not great, but sufficient for all agricultural purposes. The average annual precipitation amounts to about 36 inches.

The cool summers in the pine forests of northern Wisconsin have made the region a favorite pleasure and health resort.

Soils. There is great diversity in the soils of the State. The glaciated area is covered with a thick coating of till, consisting chiefly of loams, silt loam, and clay loam soils. Along the shores of the lakes are glacial lake deposits composed of fine-grained silts and clays. Southwest, in the unglaciated region, the loam and silty loam soils are formed from the weathering of the underlying sandstone, shales, and limestone. There are large areas here of brown or yellow silty loam soils derived from wind-blown loess. In the central and northern part of the State, along the larger streams, are extensive areas of sandy and sandy loam outwash soils. Large tracts of swampy and mucky soils in the central portion produce great crops of cranberries; and other areas of similar soil in the northern part are being drained for cranberries and garden vegetables.

Mineral Resources. Valuable mineral deposits occur in Wisconsin, principally iron, zinc, and lead. Considerable quantities of copper exist in the north, but the metal has not been mined extensively. The quarries produce granite, limestone, and sandstone. Natural cement rock, clays, mineral paints, and mineral waters are also produced in commercial quantities. Lead and zinc are found in the southwestern part of the State. Around Lake Superior, in Wisconsin, Michigan, and Minnesota, is the greatest iron-producing region in the world.

The granite product is used principally for construction work and paving blocks. No coal is found in the State, but extensive areas of peat are recognized to be of great commercial value as productive of fuel.

Agriculture. There are considerable areas of unoccupied lands in Wisconsin that are available for agricultural purposes. In the southeastern counties, over 90 per cent of the land area is in farms, while in the northern counties less than 25 per cent is so utilized. Wisconsin is principally a cereal state, but well adapted to general farming. Corn, oats, wheat, barley, and rye are the most valuable grains.

The acreage in wheat, 1919, was over 3½ times that of 1909, but in 1923 production had fallen below the 1909 mark. Corn acreage declined 21.1 per cent in the decade, but has since advanced one-third beyond the 1909 acreage. Hay and forage lead all other crops in value, potatoes, the most important cash crop, with green peas for canning, led in the vegetable group. Among special crops, tobacco, grown chiefly in the south-central counties, always ranks high, the Wisconsin substitute for Sumatra leaf for cigar binders being much favored.

Extensive areas are devoted to grains and seeds other than cereals, principally dry peas, dry beans, and flaxseed. Beet, sorghum, and maple sugar are produced. Hops are very prolific. The State leads in hemp. Apples, cherries, plums, grapes, cranberries, and strawberries are extensively cultivated.

Wisconsin is the banner State in dairy products, leading in 1919, with an output valued at nearly $278,000,000.

Forests. Since 1899, Wisconsin has declined from first to thirteenth rank in lumber production. She still has about 2,000,000 acres of woodland, including valuable stands of hemlock, white pine, spruce, larch, cedar, and various hardwoods, chiefly maple, beech, birch, basswood, and elm. Wisconsin still leads the other "Lake" states (Minnesota and Michigan) in lumber output; but the Lake States were superseded between 1900 and 1910 by the Southern yellow pine regions of the South Atlantic and Gulf States. Wisconsin's cut of timber in 1924 amounted to 1,016,506,000 feet.

Manufactures. The forests, mineral resources, and products of the soil are the basis of the important industries of Wisconsin. Lumber and timber products are among the leading manufactures, including woodwork of all kinds (furniture, farm implements, etc). In 1923, the State led in creameries, produced four-fifths of the country's cheese, and produced over half the country's output of canned peas. Other important industries are meat-packing, zinc and lead refining, beet sugar refining, iron and steel, leather, brooms, etc. The leading industrial cities of the State are Milwaukee, Racine, Kenosha, Superior, West Allis, Sheboygan, Green Bay, Manitowoc, Oshkosh, La Crosse, Fond du Lac, Beloit, Appleton, Waukesha, Madison, Janesville, Eau Claire, Wausau, Marinette, and Ashland.

Transportation. Lake Michigan, Lake Superior, the Mississippi, and the Fox rivers furnish excellent means for transportation and communication in all directions. The principal railways are the Chicago and North Western, the Chicago, Milwaukee and St. Paul, the Chicago, St. Paul, Minneapolis and Omaha, and the Minneapolis, St. Paul and Sault Ste. Marie. Milwaukee, Racine, Superior, Green Bay, and Sheboygan are important lake ports.

Defense. The National Guard, with 4,812 men, consists of one brigade of infantry, one regiment and a battalion of field artillery, a regiment of cavalry, a company of engineers, an ambulance company, and one hospital company.

History. The first Europeans to explore the Wisconsin region were the French. A mission was founded near mouth of Fox River, 1669. In 1787, the Northwest Territory, including Wisconsin, was established. Parts were gradually cut off to form the States of Ohio, Indiana, Illinois, and Michigan. In 1836 Wisconsin became a separate Territory, then including parts of North and South Dakota and all of Iowa and Minnesota. The limits were gradually reduced until 1848, when Wisconsin, with its present boundaries, was admitted to the Union.

Places of Interest. Among the beautiful resorts in Wisconsin, perhaps the most noted are the State Park at Devil's Lake, and the Dalles (or "Dells") of the Wisconsin River, where picturesque rock formations offer scenes of great beauty to thousands of visitors. The State is remarkable for the number of its interior lakes, many of them being noted summer resorts. Madison, the capital, and seat of the State University, occupies a site originally chosen because of its picturesque beauty. It is situated in Dane County, between Lakes Mendota and Monona, which, with Lakes Waubesa and Kegonsa, all connected by the Yahara River, constitute the famous "Four Lakes."

LAUGHING WATER AND FANTASTIC ROCK

THE DALLES OF THE WISCONSIN RIVER

In the vicinity of Kilbourn are the Dalles of the Wisconsin River, a gorge nearly eight miles in length, in which the stream, narrowed in certain places to a width of barely fifty feet, dashes with tremendous force along its tortuous, rock-girt passage. On either side, the encroaching sandstone rocks have been worn into grotesque or imposing forms and into precipitous overhanging walls. At the time of low water the gorge may be explored with a boat, but at high water the stream becomes a dangerous, raging torrent.

The great pine woods in the northern part of the state still abound in game. Deer are to be found in large numbers, and also occasional wolves, foxes, and black bears. Water fowl of every kind are abundant. Far to the north, in Lake Superior, the Apostle Islands have won wide fame for their delightful summer climate and scenery.

Wisconsin is famous for its lake regions, which attract not only the fisherman but the nature lover. They exceed two thousand in number, of which Lake Geneva is perhaps the gem of largest magnitude. Superb country homes of wealthy residents of near-by cities line the shore, adding architectural to natural beauty. Oconomowoc is also famed for its palatial villas and its lake, which is one of the most beautiful of the exquisite chain in Waukesha County. For the residences of Milwaukee business men, which are occupied during both summer and winter, Wauwatosa has gained an enviable reputation.

The rock sculptures of the St. Croix River are remarkable for their grotesque forms, while Palmyra boasts a rock curiously hewn by some prehistoric race into the form of an elephant. A clear and fine example of land sculpture on resistant rock is Stand Rock in the valley of the Wisconsin, a giant table on which Nature might fitly spread a feast for the forest fairies of the Badger State.

An important trade Waukesha owes to the value and popularity of her mineral waters, which are exported the world over; and Wisconsin's historic fame is also spread abroad in the recountal of the events of the war instigated by Black Hawk, a famous chief of the warlike Sacs. The bloody encounters resulting from difficulties between the various races of Red Men, broke the power of the Indians in Wisconsin.

Minnesota, like Wisconsin, is a territory crowded with charming lakes and streams, which are of every possible shape and size. Red Lake, with its area of more than 440 square miles, must be awarded the premium for large dimensions, but the rock-walled Lake of the Woods, Rainy Lake, and Lake Saganaga abound in islands which provide scenery of surpassing beauty. Lake Minnetonka, ten miles from Minneapolis, is the rest and pleasure ground of the dwellers of the Twin Cities, and its charmingly irregular shore line, its sparkling water dotted with attractive summer homes, club houses and hotels, and alive with sail boats and launches, make it ever a scenic joy. Several thousands of lakes are included in the charming Park Region in the state's central western portion, while Mille Lacs and Leech lakes beautify the middle counties.

In a pretty glen of Minnehaha Park, about five miles south of Minneapolis, is the lovely cascade of Minnehaha Creek, which is the outlet of Lake Minnetonka. The charm of "Laughing Water" has been immortalized by Longfellow in his poem of "Hiawatha"; and had the Falls a greater force of water, their beauty could be rivaled by that of few cascades in America.

The Mississippi River, that important central channel of drainage and avenue of commerce, has its source in Lake Itasca and flows approximately 800 miles within or along the boundaries of the state, being navigable for some distance beyond the flourishing city ot St. Paul, while the great St. Lawrence River system has its beginnings among the hills of northeastern Minnesota. As further proof of the value of Minnesota's waters, may be cited the Falls of St. Anthony, the utilization of whose power insures one of the most remarkable manufacturing centers in the United States, including the two largest flour mills in the world.

Copyright, Detroit Photographic Co.

MINNEHAHA FALLS, MINNEAPOLIS

MINNESOTA

Area. The land area of Minnesota is 80,858 square miles, and the water surface, 3,824 square miles, making a total of 84,682 square miles. The State ranks eleventh in size among the states of the Union. Included in Minnesota is a portion of Lake Superior, 2,514 square miles.

Population.

Year	Population	Year	Population
1860	172,023	1900	1,751,394
1870	439,706	1910	2,075,708
1880	780,773	1920	2,387,125
1890	1,310,283		

The increase in population has been extraordinarily large at each recurring census; especially from 1850 to 1860 was the rate high. Ramsey County containing the city of St. Paul, has a greater number of persons to the square mile than any other county; Cook County, in the extreme northeast, has the smallest number.

Topography. The southern and central portions of the State are occupied by rolling prairies forming part of the Prairie Plains Province. North and east are the remains of a worn-down mountain system, with ridges of hard rock which have resisted erosion. In the northwest the sediments left in the old Lake Agassiz have formed a remarkably level valley floor along the Red River, little dissected by streams. About 10,000 lakes have been left scattered over the State by glacial action, from one of which the Mississippi River has its rise.

In the southwestern counties, the "Coteau des Prairies" crosses the State, with an altitude of 1,700 feet. Where the Red River crosses the Canadian border, an elevation of 788 feet is reached.

Climate. Minnesota climate has the dryness which is characteristic of the North-Central States, and which considerably modifies the effect of the severe winter cold. The mean annual temperature is 45° Fahr. at St. Paul, and 37° in the north.

The rainfall decreases from east to west, an annual precipitation of 33.3 inches being recorded in the southeast, and less than 25 inches in the west. The snowfall is heavy all over the State.

Soil. In the southeast where the surface has not been glaciated, soft, silty loams prevail. In the south and the southwest, are brown and black silt loams over the prairies, with areas of dark-colored, somewhat stony loams in the timber regions. North and east are sandy and gravelly outwash soils, the stony ridges being thinly covered. Around the extremity of Lake Superior are red clays and clay loam areas. The Red River Valley soils in the lower-lying areas are brown to black clay loams and clays, with the margins more loamy or sandy.

Mineral Resources. The mining of iron ore is of great importance. The output is chiefly red hematite, the deposits being found in the iron ranges in the northeastern part of the State. Mesaba Range is the most productive iron range in the world. The Vermilion Range is also exceedingly rich. The ore lies very near the surface, making mining operations simple and inexpensive. A conservative estimate places the amount of high-grade ore in Minnesota at 2,000,000,000 tons. The State produces over 60 per cent of all the iron ore of the country. The ore is shipped by boat to Illinois, Indiana, Ohio, and Pennsylvania for smelting and manufacture.

The quarries of the State produce large quantities of building stone, granite, sandstone, and limestone. Large beds of sand, gravel, and clay furnish abundant materials for brickmaking and the manufacture of clay products.

Agriculture. Minnesota is one of the great cereal-producing states of the Union, the leading grains being corn, wheat, and oats. The cereals combined make up about three-fifths of the crop value of the State. The chief cereals besides those already mentioned are barley, rye, and buckwheat. Other important crops are hay and forage, potatoes, grains and seeds other than cereals, principally flaxseed, vegetables, flowers, plants, and nursery products, fruit and nuts, small fruits, and sorghum and maple sugar and sirup.

Apples are the leading orchard fruits, others being comparatively inconsiderable.

Large numbers of milk cows and other cattle, swine, sheep, and horses are raised on the farms.

In the northern portion of the State, there are still considerable areas of uncultivated land.

Forests. In 1899, State ranked third in lumber output; but, 1924, was nineteenth, with cut of 527,962,000 feet, including white pine, spruce, birch, larch, cottonwood, and balsam. Much wood pulp is also made.

Manufactures. Excellent transportation facilities, immense water-power, and great natural resources have made the manufactures of considerable and growing importance in Minnesota. Minneapolis is the greatest flour-making center in the world, and the State ranks high also in dairy products. Other flourishing industries are the manufacture of lumber and timber products, slaughtering and meat-packing, the manufacture of butter, cheese, and condensed milk, foundry and machine shops, railroad shops, linseed oil factories, woolen goods, leather, boots and shoes, brick, and lime. The chief industrial cities are Minneapolis, St. Paul, Duluth, Winona, Mankato, Stillwater, and St. Cloud. Immense water-power is utilized for manufactures at the International Falls and on the St. Louis River at Duluth.

Transportation. The cities of St. Paul and Minneapolis form one of the most important centers for transcontinental railway traffic, and the city of Duluth on Lake Superior is one of the foremost shipping ports of the United States. Nine railroads radiate from St. Paul.

The principal railroads are the Chicago & Northwestern; Chicago, Milwaukee & St. Paul; Northern Pacific; Great Northern; Chicago, Burlington & Quincy; Chicago, Rock Island & Pacific; and Minneapolis, St. Paul & Sault Ste. Marie. There are seven navigable rivers within the State, the Red, the Redlake, the Rainy, the Minnesota, the Mississippi, the St. Croix, and the St. Louis.

Defense. On November 30, 1925, the National Guard of Minnesota consisted of 322 officers and 4,239 enlisted men. They were organized as three regiments of infantry, one brigade of field artillery, an observation squadron and a photo squadron.

History. The earliest known European explorers in the Minnesota region were Radisson and Groseilliers, French trappers, who visited the Mille Lacs district in 1659-1660. In 1671 a proclamation was read to the representatives of fourteen Indian nations, asserting French authority in the Great Lakes region, and in 1686 Nicholas Perrot took formal possession of the region in the name of the French king. No permanent settlement, however, was made for more than a century, the region being frequented only by fur-trappers and traders.

After 1763 the land east of the Mississippi was ceded to the English, and after the Revolution in turn to the United States. The part west of the Mississippi became United States territory after the purchase of Louisiana from the French. Up to 1848 the two regions east and west of the Mississippi River formed part of various territories of the upper Mississippi Valley as they were organized. With the creation of Wisconsin and Iowa, the district now included in Minnesota was finally left without jurisdiction; and in 1849 the Territory was formed with the present State boundaries and including half of North and South Dakota. In 1858 the Territory was admitted to the Union as a State with its present boundaries, the thirty-second State admitted.

The first permanent settlement was made in 1826, by refugees from a settlement of Swiss in North Dakota, near Fort Snelling. The fort had been established in 1819.

Places of Interest. Minneapolis, with its fine parks and boulevards, its broad and well-kept streets and beautiful homes, is one of the most attractive cities of the Middle West. The capitol building at St. Paul is one of the most beautiful of its kind in the United States. Connected closely by rail with both cities is delightful Lake Minnetonka. The State University, with an enrollment of about 6,000 students, is located at Minneapolis.

One of the most striking scenic features of the State is the multitude of beautiful lakes scattered in nearly every portion. At Mankato is Minnesota State Park, with its wonderful waterfall. Hibbing, in the northeast, is one of the largest-producing iron-ore camps in the world.

NORTH DAKOTA

Area. North Dakota ranks sixteenth in size in the Union, with a gross area of 70,837 square miles. It is about equal in area to Ohio and Indiana combined. There are 654 square miles of water surface in the State.

Population.

Year	Population	Year	Population
1890	190,983	1910	577,056
1900	319,146	1920	646,872
1905	437,070		

The population figures for 1880 are for that part of Dakota Territory which was later taken to form North Dakota.

The proportion of rural to urban population, according to the census of 1920, was 86.4 to 13.6. In 1900 it was thirteen to one, and in 1910 about eight to one. The average density of population in 1920 was 9.2 persons per square mile, with the highest density in the eastern counties. The percentage of foreign-born whites is large, in 1920 amounting to 20.3 per cent of the total. Indians, 6,254.

Topography. The State of North Dakota lies chiefly within the Mississippi basin. The eastern portion of the State is a low, level plain from twenty-five to seventy miles broad, constituting the western part of the Red River valley. This valley plain merges into a glaciated plateau country, with a broad elevation called the Coteau des Prairies, extending in a general northwest direction and covering the greater part of the State. The surface is billowy, caused by the debris left by glaciation. This region is succeeded in the west by a broad stretch of residual prairies, and in the extreme southwest by a small tract called the "bad lands," the surface of which is much eroded, and hardened and broken by burning coal seams. Along the northern border, several groups of hills rise from the plateau to an inconsiderable height.

Climate. The climate is very nearly uniform all over the State. The mean annual temperature is 39° Fahr. The extreme in summer reaches 106°, and in winter −44°. The winters are long and severe; but the pure, dry air mitigates the effect considerably. High winds are frequent; and, in summer, occasional hot winds are injurious to vegetation. In the winter, snowfall is light; but blizzards a few times every year cause considerable suffering and damage to the stock herded on the open prairies. The normal annual rainfall ranges from 15 inches at the western boundary to about 20 inches at the eastern boundary, and is sufficient for agriculture without irrigation, though this is practiced to some extent in the extreme west, over 12,000 acres being irrigated in 1919.

Soils. The Red River valley is covered with dark brown to black clay loams, and clays characterized by a highly calcareous subsoil. This is the bed of the extinct Lake Agassiz. It is free from trees, rocks, and dissecting streams, and is thus particularly adapted to large, profitable farms. This is the great spring wheat region. The rolling western portion of the valley is covered with sands, sandy loam, and gravelly loams of brown, yellow, or gray, deposited at the margins of old glacial lakes or in bars near the shore line. The glaciated plateau region is covered with a glacial till from ten to two hundred feet deep, of fine sandy loam, silt loam, and loam soils, mingled with stony areas on the steep slopes and higher ridges. The residual prairies are mainly covered with loams and clay loams derived from the underlying shales. The "bad lands" or high plains area, in the southwest, are dotted with areas of residual soils, and are valuable grazing lands.

Mineral Resources. North Dakota has few minerals. Lignite is the principal product, but of little value as fuel. Sandstone, granite, gneiss, natural gas, mineral waters, salt, and good clays for brick and tile are found.

Agriculture. North Dakota was the leading wheat-growing State in 1909, but ranked second in 1923. The character of the crops of the State in general is indicated by the fact that more than 71 per cent of the total value of the agricultural product in 1919 was contributed by the cereals. Spring wheat is the great cereal crop of North Dakota, and is concentrated chiefly in the eastern counties. The oat crop is next in rank in the State, though only one-fourth of the wheat crop in value, the other cereals in order of value in 1923 being rye, barley, and corn.

Other crops are hay and forage, potatoes and other vegetables, flaxseed, and fruits and nuts. The corn crop of North Dakota is comparatively small, and is raised chiefly in the southeastern portion.

In the years from 1890 to 1920, the acreage in farms increased enormously. In 1890, the total was 7,660,333 acres, and in 1920 it had grown to 36,214,751 acres. The increase in the total acreage under cereals was especially great from 1900 to 1910.

The irrigation projects under the Reclamation Act affected 57,476 acres in 1920, and 12,072 acres were actually irrigated.

Stock-raising is an active branch of the agricultural industry in North Dakota, chiefly of horses and cattle.

Manufactures. The predominating importance of North Dakota's agricultural facilities has precluded any appreciable development of her manufacturing industries. Since 1914, establishments have increased slightly, but the value of products has doubled. Manufactures, except flour milling, are chiefly for home consumption. Flour and grist mill products comprise the largest share of the total manufactured output of the State. The other industries are now largely adequate for local needs; among them are printing and publishing, the manufacture of butter, cheese, and condensed milk, and tanneries, railway shops, bakeries, and brick and tile works.

The principal industrial centers are Fargo and Grand Forks. At Fargo, saddlery and harness manufactures, and printing and publishing, are of great importance. The leading industries at Grand Forks are flour mills and grist mills, and the printing and publishing establishments. Minot is also an important center.

Transportation. North Dakota is exceptionally well served by railroads, and much of the State's development is due to them. The principal lines are the Great Northern; the Northern Pacific; and the Minneapolis, St. Paul and Sault Ste. Marie. These roads have numerous branch lines over the country. In the south, the Chicago, Milwaukee and St. Paul sends several branches into the State from South Dakota; and the Chicago and North Western sends one branch. The Red River and the Missouri are navigable by small boats.

Defense. The North Dakota National Guard was made up of 65 officers and 1,314 enlisted men in 1925. They were organized as one regiment of infantry.

History. Traders of the Hudson's Bay Company and the North-West Fur Company were the first to attempt settlement in the region. Some of them lived there for a time, but no permanent settlement resulted. In 1803, with the Louisiana Purchase, the region became United States territory; and in 1804 Lewis and Clark entered it for exploration. The first real homeseekers in the region were a party of Scottish Highlanders who settled on the site of modern Pembina about the year 1810. After the acquisition of the Louisiana Territory, the North Dakota region belonged successively to the Territory of Louisiana and the Territory of Missouri; the part east of the Missouri and the White Earth rivers, to Michigan, Wisconsin, Iowa, Minnesota; and the part west of the Missouri and the White Earth, to the "Indian Country" and Nebraska. With the creation of surrounding territories, the region now included in North Dakota was gradually carved out.

When the Dakota Territory was first organized, it included North and South Dakota and parts of Wyoming and Montana. From 1861 to 1889 the Territory was gradually reduced to its present boundaries. Both Dakotas were admitted to the Union, Nov. 2, 1889.

The development of the region was much retarded by the Civil War without and the Indian wars within its borders. For many years the Sioux Indians were hostile, but they were crushingly defeated in battle, and driven to the west.

The railroads were of much importance in opening up the land, offering special inducements to settlers. The allotment of government lands was also a great aid to development.

Places of Interest. The healthful and invigorating climate is attracting a constant influx of farmers and settlers. Permanent agricultural interests have resulted in the establishment of a great Agricultural College and Experiment Station near Fargo. Travel in the vast wheat fields of the Red River Valley, stretching many miles, is a never-to-be forgotten experience.

'MID YELLOW GRAIN AND TINTED ROCK

The golden wheat fields of the Dakotas proclaim them to be unmistakably prairie-plain states. In many districts the high winds necessitate protection by rows of trees called windbreaks, lest hot, dry breezes or the other extreme, hailstones, prove disastrous to vegetation at certain seasons of the year.

Northeast lie the level plains of the Red River Valley, the floor of the ancient glacial Lake Agassiz, now a vast undulating sea of ripening wheat. West and south stretch the great prairie plains rising to wide, level elevations, broken by river valleys and occasional buttes and hills, until in southeastern South Dakota the Black Hills rise full of cañons and caves, the delight of tourists.

In the Black Hills, which received their name from the fact that their slopes are dark with heavy forests, lies Spearfish Creek, which irrigates a territory of greater value than any other farm land in South Dakota, and whose trout hatchery ranks among the largest in the United States. This gateway to the famous mining region affords entrance as well to the cañon of Spearfish Creek, noteworthy for its scenic features, among them its picturesque falls, rivaling the beauties of Colorado.

Colorado is at the very heart of the Rockies, and from Denver, the capital city, trips in all directions may be planned that will include mountain climbs, health-bringing mineral springs, magnificent gorges, or trails through dense forests. The auto drives on the brink of yawning chasms, over high peaks, and beside rippling streams famous for their thrilling beauty. Such is the journey from Colorado Springs to Crystal Park, while equally scenic routes may be taken each day for a month, in and around Colorado Springs, visiting in turn Cheyenne Cañon, Monument Valley Park, Palmer Park, and other delightful spots, including the beautiful Garden of the Gods.

THE NARROWS—WILLIAMS CANON, COLORADO

There is no more favored watering place in the West than Manitou, whose medicinal waters have been lauded since the days when America's earliest inhabitants roamed the forests and climbed the mountains with bow and arrow in search of game. The lofty summit of Pike's Peak is gained by an ascent from this point, and the marvelous Cave of the Winds is in its vicinity. Near by is Williams Cañon, a noteworthy feature of which is The Narrows, a restricted gateway permitting the passage of but one vehicle through the cleft between the richly tinted, overhanging rocks which almost form an archway.

A trip over the new state highway to Cañon City and the Royal Gorge is the climax of a visit to this region of great beauty. The Sky Line Drive emphasizes the loveliness as the return trip is made by it from the brink of the Royal Gorge, 1,500 feet above the rushing, foaming river which is accountable for many of Nature's unique and surpassingly beautiful formations in this vicinity.

Though Pike's Peak dominates the lofty summits of the Rampart and other ranges, a more beautiful chain of mountains is the Sangre de Cristo, two of whose peaks — Blanca and Old Baldy — are more than 14,000 feet high; Rita Alto Peak and others rise to an almost equal height and rival them in beauty. But none of these ranges, however, compare in magnificence with the Sawatch and nearby chains in the center of the state. Here Mount Shavano soars to a height of 14,239 feet, while Mounts Princeton, Yale, and Harvard, named in honor of three of America's colleges, each exceed 14,000 feet in height. Massive Mountain is the highest peak in a state that can claim 180 summits rising 12,000 feet above sea level, and forty which tower to a height of more than 14,000 feet.

SOUTH DAKOTA

Area. The gross area of South Dakota is 77,615 square miles, of which 747 square miles are water surface. The State ranks fourteenth in size in the Union. Indian Reservations, covering 14,000 square miles in 1900, totaled 551 square miles in 1924.

Population.

Year	Population	Year	Population
1890	348,600	1910	583,888
1900	401,570	1920	636,547

The highest density of population in the State is found toward the east. Minnehaha County, containing Sioux Falls City, has the highest density among the counties, and Washabaugh County the lowest. A comparatively new State, the population is small, and 84 per cent of the inhabitants live in rural territory. In 1920 only 16 per cent of the population lived in cities of 2,500 inhabitants and over. The largest city is Sioux Falls, with 25,202 inhabitants in 1920. It is on Big Sioux River, in the southeast.

Topography. The eastern portion of the State consists of a high, heavily glaciated, rolling plateau extending west to the Missouri River. It ranges from 1,000 to 1,800 feet in altitude, with the lowest elevation in the southeastern corner, within the alluvial bottoms of the Missouri River. West of the Missouri the rolling prairies are considerably dissected by creek and stream beds, which become more pronounced and canyon-like as the Black Hills are approached. In the extreme northeast, the Coteau des Prairies crosses the State, a continuous tableland about 2,000 feet in altitude. A plateau-like elevation called the Coteau du Missouri lies east of the Missouri River. West of the Missouri are clusters of hills cut up by deep ravines. In the southwest are the so-called Bad Lands, an area very deeply eroded by streams and cut up into fantastic formations and labyrinths of ravines and ridges. Just northwest of the Bad Lands are the Black Hills, an irregular, dome-shaped uplift comprising an area of about 5,000 square miles, the highest point of which is Harney Peak, 7,240 feet. The uplift consists of high ridges, deep-cut gorges, buttes, and granitic rocks in strange forms. The greater part of the Black Hills region is heavily forested.

Climate. Owing to the general high altitudes, the climate shows great annual variation. The coldest region is in the northeast, and the warmest in the southwest. The winters are long and cold, but the dryness of the season lessens the effect. The mean annual temperature for the State is about 45°.

The mean annual rainfall, which comes chiefly in the growing season, is 25 to 30 inches in the east, but decreases to 16 to 20 inches in the west, where, in 1920, over 100,000 acres were under irrigation.

Soils. The soils of the eastern two-fifths of the State, comprising the glaciated region, are derived from a layer of glacial till, varying in thickness from a few feet to more than 200 feet. They are largely brown or yellow silt and other loams, and are well suited to the production of the grains. In the extreme southeast, is an area of soft, silty deposit known as loess, which yields brown silty loams. West of the Missouri River, the soils are sandy loams, clay loams, and heavy clays derived from the underlying sandstone and shale. In the Black Hills, there are few areas adaptable to any form of agriculture, except in the narrow valleys.

The Missouri River and its tributaries are bordered by narrow alluvial bottoms.

Mineral Resources. The mining area of South Dakota is concentrated chiefly in the southwest, in the Black Hills region. The important products are gold, silver, lead, tungsten, and mica. The Black Hills quarries produce sandstone, quartzite, limestone, and dolomite. Clays and materials for cement are also found in the State. The State ranked fourth in gold output, 1924, with 297,000 ounces, value over $7,000,000. Coal is found in northwest, but little worked. Other minerals are gypsum, antimony, lithium minerals, and pyrites.

Agriculture. One of the newer agricultural states of the Union, there are still large cultivable areas not yet occupied, though these are rapidly being taken up. In the ten-year period 1910 to 1920, the total land acreage in farms increased 33.1 per cent, and improved land in farms increased 15 per cent; but nearly 15,000,000 acres was still unoccupied for farming purposes.

South Dakota is one of the great cereal states of the Union. Corn is the principal crop, though wheat also gives the State high rank, with common spring wheat the leading variety. Other cereals produced in large quantities are oats, barley, and rye. The eastern counties are the principal grain producers.

Crops next in importance after cereals are hay and forage, flaxseed, potatoes and other vegetables, fruits, and nuts.

Stock-raising is an important branch of agriculture in the State, large areas in the west being best adapted to this use. Large numbers of milk cows and other cattle, hogs, sheep, horses, and mules are raised.

Forests and Forest Products. The forests of South Dakota are concentrated chiefly in the Black Hills district, where about 1,750 square miles are woodland. The principal timber is yellow pine. Narrow strips of black and white spruce forest are found along the larger streams, but the rest of the State consists of treeless prairies.

Manufactures. Preëminently an agricultural State, manufactures are relatively small, but rapidly developing. The products are mainly based on natural resources, and are chiefly for home consumption. Flour and grist milling and the making of butter, cheese, and condensed milk, are the chief manufacturing industries. Others are lumber and timber milling, woodenware, ore smelting, brick making, canning vegetables, printing, and car building. Chief industrial centers are Sioux Falls, Aberdeen, Huron, Rapid City, and Watertown.

Transportation. The State is excellently served by railroads, and owes its rapid development largely to them. The eastern portion is covered with a network of lines, a few of them extending across the State from east to west. The mining districts in the southwest are also well provided with railroad facilities. The chief railways in the State are the Chicago and North Western, and the Chicago, Milwaukee and St. Paul.

Navigation on the Missouri is extremely uncertain owing to the shifting of the channel and to the low water.

Defense. The National Guard of South Dakota had, on November 30, 1925, 97 officers and 1,192 enlisted men. They make up one regiment of engineers, one regiment of field artillery, and one motor transport company.

History. French traders entered the region now included in the State of South Dakota early in the eighteenth century; but authentic information concerning the country was not obtained until 1804-1806, when Lewis and Clark led their exploring party into the northwest, ascending the Missouri River. In 1831 a steamboat ascended the Missouri as far as Fort Pierre, and up to 1843 various other explorations of the country were made. In 1861 the Territory of Dakota was created, including North and South Dakota, most of Montana, and half of Wyoming. The Civil War hampered immigration to a great extent, and Indian uprisings also caused considerable trouble for the new settlers.

The creation of the Territory of Idaho, which at that time included Montana, the creation of the Wyoming Territory, and the settlement of the southern boundary with Nebraska in 1870 and 1882, brought the area of North and South Dakota down to the present limits.

A large influx of settlers was started by the discovery of gold in the Black Hills in 1874.

In 1887 the Dakota Territory decided by popular vote to divide into two states. In 1889 the southern half of the Territory drew up a state constitution, and in the same year was admitted to the Union as South Dakota. Since then the increase in population has been fairly steady.

The name of the State was taken from that of an Indian tribe once occupying the lands included in the states of North and South Dakota, Montana, and Minnesota.

Places of Interest. The Black Hills are of world-wide renown for their scenery. At Hot Springs is a famous health resort, with a National Sanitarium for soldiers and sailors. Near by is the celebrated Wind Cave. Near Custer is Sylvan Lake, a famous mountain, health, and pleasure resort.

At Wessington Springs and Woonsocket are noted springs. Lake Kampeska is a favorite summer resort near Watertown.

NEBRASKA

Area. The land surface of Nebraska totals 76,808 square miles, and the water surface 712 square miles, an area about 7 times as large as Belgium, and about 18,500 miles greater than England and Wales combined. The State ranks fifteenth in size among the states of the Union.

Population.

Year	Population	Year	Population
1870	122,993	1900	1,066,300
1880	452,402	1910	1,192,214
1890	1,062,656	1920	1,296,372

Census reports, 1920, place the greatest density of population in Douglas County, where the city of Omaha is located. Banner, Grant, and Hooker counties divide the claim to lowest density. Over 68 per cent of the population is classed as rural.

Topography. Lying entirely within the great plains region, the surface of Nebraska is undulating to rolling, a vast prairie land sloping gradually from an altitude of 5,300 feet in the west to 880 feet at the Missouri River. River valleys are broad and shallow, and in the east dissect the surface considerably. In the north-central portion is an extensive tract of low sand hills, now almost completely covered with vegetation. In the extreme west the surface is considerably broken up by buttes and foothills, testifying to the approach to the Rockies.

Climate. The climate of Nebraska is continental, that is, characterized by winters of considerable severity and summers of great warmth. Because of the pure, dry air, however, the cold of winter is little felt, and the almost constant winds in the summer diminish the effect of the heat. The seasonal and daily temperature ranges are considerable. The mean annual temperature is 48.7° Fahr.

Rainfall is limited, but is most plenteous when particularly needed for agricultural purposes. The moisture-storing quality of the soil also does much to overcome deficiencies in rainfall, and the percentage of unsuccessful crops is extremely small. Rarely, a wind from the southwest, of extreme dryness, has been known to wither entire crops and all vegetation in its path, but such an occurrence is very uncommon.

Soils. The great prairies of Nebraska are occupied by loess, a sandy or silty loam of great fertility and of such depth as to make its agricultural resources almost inexhaustible. The superficial soil over most of the State is a rich, black, vegetable mold. Practically all of the northern border lies in the northern residual prairies. The soils are principally heavy loams and clay loams suitable for grazing and dry farming. In the sandy regions of the north-central and western portions, the soil, prevailingly loams and sandy loams, is always receptive of moisture and capable of holding it well. These sandy regions are excellent for grazing purposes. The so-called Bad Lands in the west (originally "Bad Lands to Traverse") are not infertile, but received the name because of the broken and difficult nature of the surface.

Mineral Resources. Western Nebraska is dotted with potash lakes, which during the war produced about 45 per cent of country's potash output. Some coal is mined in southwest and northeastern sections. Other products are clays, salt, cement, pumice, stone, and gravel. Mineral waters are produced in comparatively small quantities.

Agriculture. Nebraska is one of the most important agricultural states in the Union. Almost 86 per cent of the land area of the State, 1920, was in farms, which are decreasing in number but growing in acreage. Farms operated by tenants are gradually increasing in number. Dry farming has been extensive in western sections, but these are now rapidly developing under irrigation. Over 442,600 acres were irrigated in 1919.

Nearly four-fifths of the total value of crops in Nebraska is contributed by the cereals. Grains and seeds make up over 75 per cent of the total value of all crops, and hay and forage about 18 per cent. Corn is the great cereal crop of the Nebraska plains. Next in order come wheat, oats, barley, rye, emmer and spelt, buckwheat, kafir corn and milo maize. Considerable durum wheat is grown in western part of State. Alfalfa seed, clover seed, flaxseed, sorghum-cane seeds, millet seed, flower and garden seeds are the great seed crops. Potatoes and vegetables rank high in value. Sugar beets are raised in some localities. Of small fruits the strawberry is the most important. Apples contribute the greater part of the orchard fruits.

Stock-raising is pursued on a large scale. Great numbers of cattle, horses, sheep, and hogs are raised or brought in for fattening.

Manufactures. The agricultural and live-stock resources of the State form the basis of the important manufactures. The natural advantages provided by vast quantities of forage and grazing lands have brought about great activity in the slaughtering and meat-packing industry, which leads the manufacturing industries in value of product. The live-stock industry is also the basis of the manufacture of butter, cheese, and other dairy products, which ranks among the leading industries of the State, and of the manufacture of leather, which also holds high rank.

Other important industries are: smelting and refining, lead copper, and other ores, flour and grist mills, railway car construction, and other lines of manufacture common to progressive communities. In 1923, there were 1,379 establishments, giving employment to 31,267 wage-earners, paying over $39,761,000 in wages, using raw materials costing over $314,027,000, and putting out products valued at nearly $415,057,000.

The great industrial center of the State is Omaha. The meat-packing industry is centered in South Omaha, employing about a quarter of all the wage-earners in the State. Nebraska is among the leading states in the Union in this industry.

Transportation. Railroads are best developed in the eastern half of the State, and furnish good facilities for transportation and direct connection with outside markets. The principal railroads traversing the State are the Union Pacific; Chicago and North Western; Chicago, Burlington and Quincy; Chicago Rock Island and Pacific; Chicago Great Western; and the Chicago, Milwaukee and St. Paul. Ten trunk lines radiate from Omaha, and with their numerous feeders form a network over the State. North and south lines are increasing in number and importance as freight carriers. River navigation is not extensive, except at Omaha, which is the center for both railroad and river traffic.

The monumental Lincoln Highway traverses the State from Omaha, through or near Fremont, Columbus, Central City, Grand Island, Kearney, North Platte, Big Springs, and via Bushnell to Cheyenne, Wyoming.

Defense. Nebraska's National Guard includes 106 officers and 1,692 enlisted men, comprising one regiment of infantry, one medical regiment, and the 35th Division Train, Q. M. C.

History. Nebraska is an Indian appellation signifying "water valley." The Spaniard Coronado visited this region in 1541. In 1673, Marquette passed the mouth of the Missouri, and in 1739 the French followed the Platte River to the Forks. After the Louisiana Purchase, of which Nebraska formed a part, American exploring expeditions entered the region, bringing back rather unfavorable reports of the character of the land. In 1795, 1802, 1807, and 1812, posts were established for the propagation of the fur trade, two of them near the present site of Omaha, one at Fort Calhoun, and the other at Bellevue. From then on until 1854, a number of forts and depots for supplies were established to support the great rush across the State of gold seekers and Mormons. In 1854 the Kansas-Nebraska Bill created the Territory of Nebraska, which then extended as far north as British America, and from the Missouri to the summits of the Rocky Mountains. In 1861 and 1863, the territory was reduced to its present size by the creation of surrounding territories. Settlement was greatly stimulated by the Homestead Act of 1862, and by 1867 the Union Pacific Railway was extended across the State. In 1867 Nebraska was admitted to the Union.

Places of Interest. Milford is a popular summer resort. It is also the site of the Nebraska Industrial Home and the Soldiers' and Sailors' Home. Omaha, the State's largest city, is the principal manufacturing center. The University of Omaha and Creighton University are located here. Lincoln, the capital, is one of the most attractive residence cities of the Middle West. Here is the Nebraska University, and just outside the city are the State fair grounds.

IOWA

Area. Iowa ranks twenty-fourth in size among the states of the Union. It is 210 miles wide and 300 miles in length. Its gross area is 56,147 square miles, of which 561 square miles are water surface.

Population.

Year	Population	Year	Population
1890	1,912,297	1910	2,224,771
1900	2,231,853	1920	2,404,021

Population in rural districts has decreased, while urban population has increased. The population is more uniformly distributed than in any other State.

Topography. Iowa is for the most part a prairie tableland. The entire State lies within the northern portion of the low plateau which constitutes the upper part of the Mississippi drainage basin. With the exception of a small section in the extreme northeastern portion of the State, where the Mississippi River is bordered by rugged bluffs, the surface is undulating to rolling, and in a few sections hilly. Elevations above the sea range from between 1,200 and 1,670 feet in the northwest, to 500 feet and less in the southeast, the highest point being in the vicinity of Sibley, the lowest at Keokuk. In the southern half of the State, the height of the crest of the divide is very uniform. The northern half is more broken and irregular. Elevations are mingled with depressions, some of which are occupied by shallow lakes or ponds. In the rugged, driftless northeast corner, the largest streams nearly all flow circuitously between steep and vertical cliffs or in deep, craggy ravines. Extending from Spirit Lake and diagonally southeast is the water-parting, which divides the State into two drainage systems.

Climate. The mean annual temperature is 47.5°. The climate is one of great extremes of heat and cold, with a dry winter and usually a wet summer. The prevailing wind of winter is northwest, while in summer it not infrequently blows from the southwest. The precipitation is generally less in the western part of the State in winter, and greater in spring and summer, than in the eastern portion. June and July are the hottest months. Liability to injury of the crops from excessive rainfall is much greater than danger of damage from drought.

Soils. Owing to repeated glacial invasions, the underlying rocky floor is usually covered to depths ranging from 15 feet to 200 feet by mechanically ground and thoroughly mixed glacial debris commonly known as till. With respect to both topography and soils, Iowa is peculiarly favored for agricultural purposes. Five different soils have been distinguished—the glacial plateau, covering the northern central part of the State to the extent of two-thirds of its area; the deep loess soils, bordering the Missouri and Mississippi rivers, and extending in a narrow belt from the east nearly to the center of the State; the shallow loess soil of the south-central section; the small unglaciated section in the northeast corner; and narrow lines of alluvial soil along the Missouri and Mississippi rivers. With few exceptions these soils are deep, fertile, and well supplied with organic matter. They are mainly dark brown to almost black clay loams, with a small amount of sandy loams in the southern areas.

Mineral Resources. The principal minerals of Iowa are bituminous coal, cement, and clay products. The coal beds are in the southern part of the State, and extend under about two-fifths of its surface. Throughout all this coal region of Iowa occur unlimited quantities of an excellent quality of clay for the manufacture of paving, pressed, fire, and other kinds of brick. A fine quality of potter's clay and material for tiling, terra-cotta, and in fact nearly every kind of clay product, is plentiful. The first mines to be worked in the State were lead and zinc, but they are little utilized at present. Gypsum deposits extend over an area of about fifty square miles in the vicinity of Fort Dodge. Limestone and sandstone are profitably quarried.

Agriculture. Iowa is preëminently an agricultural State. All the staple crops of northern climates may be grown within its borders. That part adjacent to the Mississippi and Missouri rivers is thoroughly drained. The north-central portion is much more in need of artificial drainage, and there are some considerable areas in the southern part of the State in which the natural drainage, especially of the subsoil, is inadequate. The superior qualities of the soil, combined with the generally warm and moist weather in the spring, make Iowa one of the foremost states of the Union in agriculture and stock-raising, particularly in the production of Indian corn, oats, and hay, and in raising of hogs, horses, dairy cows, and poultry. Iowa is the great corn State, and leads also in oats, Illinois ranking second in both. Potatoes, apples, and small fruits are successfully grown. The several crops for the most part are evenly distributed throughout the State; but nearly all the winter wheat is grown in the south and southwest, spring wheat most largely in the northwest, barley in the north, flaxseed and prairie hay in the northeast.

Forests. The forests of Iowa were originally extensive and heavy, especially in the east, but most of the timber has now been cut.

Manufactures. There is considerable diversity in the manufacturing activities of the State, although a few industries predominate in importance. The manufactures of Iowa are chiefly those that have to do with the products of the farm. Meat-packing holds first place. Next in importance is the manufacture of dairy products, the State ranking high in the value of cheese, butter, and condensed milk, and of food products. Flour and gristmill products are also important. Among the lesser manufactures are lumber and timber products, most of the raw material being floated down on rafts from Wisconsin and Minnesota. This industry is declining because of the depletion of the northern forests. The chief manutacturing cities are Sioux City, Cedar Rapids, Des Moines, Ottumwa, Waterloo, Dubuque, Davenport, Clinton, Mason City, Keokuk, Burlington, Fort Dodge, Muscatine, Council Bluffs, Marshalltown.

Transportation. The advantages of railroad transportation are equally distributed, and the farmers in all parts of the State have easy access to railroad markets. Scarcely a farm is more than six or eight miles from a railroad station. Iowa is exceeded by only three other States in railway mileage. Electric interurban railways are increasing in importance for passenger and freight service. Natural transportation facilities are afforded by the Mississippi and Missouri rivers. The former difficulties with the Des Moines Rapids of the Mississippi have been overcome by a canal, locks, and a great reinforced concrete dam thrown across the river at Keokuk. Other improvements are a harbor at Muscatine, a harbor of refuge below Davenport, and channel improvements at Clinton.

The monumental Lincoln Highway traverses the State, passing from Clinton by way of Wheatland, Mechanicsville, Marion, Cedar Rapids, Belle Plaine, Tama, Montaur, Marshalltown, Ames, Ogden, Carroll, Vail, Woodbine, and Council Bluffs, to Omaha, Nebraska.

Defense. The Iowa National Guard was made up of 237 officers and 3,225 enlisted men in November, 1925. They were organized as one brigade of infantry, a regiment of cavalry, one regiment of field artillery, and an ambulance company.

History. The name Iowa was taken from a tribe of Indians who formerly occupied the region now constituting the State. The French missionaries, Marquette and Joliet, visited the eastern borders of Iowa in 1673; and Hennepin, in 1680. In 1788, Dubuque, a Canadian Frenchman, obtained from the Indians the grant of a large tract of land, including the site of the city now bearing his name. He built a fort and carried on trading and lead mining. On his death the settlement was abandoned; and no permanent settlement was made until about 1833, when Burlington, Dubuque, and Fort Madison were established. Iowa originally formed a part of the Louisiana region claimed by the French. It was ceded to Spain in 1762, retroceded to France in 1800, and purchased by the United States in 1803. It formed in turn a part of Louisiana, Missouri, Michigan, and Wisconsin. On June 12, 1838, it was organized as the Iowa Territory. After the rejection of two constitutions, it was admitted into the Union on December 28, 1846.

Places of Interest. Cedar Rapids, located on the Cedar River, has one of the largest cereal mills in the world. Des Moines is interesting as capital of the State. Here are located the Drake University, Des Moines College, and Highland Park College. Cedar Falls is the seat of the Iowa State Teachers' College.

Pleasure and health resorts are located at Colfax, where there are fine mineral springs; at Okoboji, the summer camp of the State University; and at Spirit Lake.

MISSOURI

Area. The gross area of Missouri is 69,420 square miles, of which 693 square miles are water surface. The State ranks eighteenth in size among the states in the Union.

Population.

Year	Population	Year	Population
1860	1,182,012	1900	3,106,665
1870	1,721,295	1910	3,293,335
1880	2,168,380	1920	3,404,055
1890	2,679,185		

Of the counties in the State, Jackson contains the greatest number of persons to the square mile, and Shannon the smallest. In general the inhabitants are evenly distributed over the State, a slightly lower density being found in the Ozark region. The urban population has increased in number and in percentage of total, since 1900, while the rural population has declined.

Topography. The northwest portion of Missouri lies in the prairies of the Mississippi Basin Plateau. The surface has been glaciated and is gently undulating. River valleys are cut deeply, especially toward the west. Across the State toward the south and southeast, the Ozark uplift rises from the prairies in scattered, rounded heights and ridges, separated by winding valleys. The highest point is Tom Sauk Mountain, with altitude of 1,800 feet. In the southeast, beyond the Ozarks, lies a lowland area, swampy in the lowest parts; and in many places along the Mississippi in this region, levees restrain the river floods.

Climate. The mean annual temperature of the State varies from 52.1° in the north to 55.7° in the south. Ranges between extremes for the month and for the year are great. Ordinary extremes for summer and winter are 100° to 106°, and −20° or −22°, respectively. The average yearly rainfall at St. Louis is 41.1 inches.

Soils. In the glaciated region in the north, the soils are prevalently silty, giving rise to a gray to brown silty loam, with a stiff plastic silt loam or clay subsoil. Along the rivers and a distance back from the river bluffs, the prevailing soils are yellow and brown loams. The latter soils are not so well adapted for the raising of corn as the former, but are better for wheat and grass.

Soils of the Ozark region are derived from cherty and flinty limestones and fine-grained sandstones, giving rise to gray silty or stony soils. These areas are well adapted to orchard fruits, especially apples. In the southeast, the Mississippi bottoms spread out to many miles in width and are well adapted for cotton growing. Loess deposits prevail in the southeast.

Mineral Resources. Missouri is rich in minerals of a wide variety. The mineral center lies in the Ozarks, and the chief products are lead, zinc, coal, iron, copper, nickel, cobalt, tripoli, and barytes. Zinc chiefly in Joplin district in southwest. Clays occur abundantly, and the stone resources are large. Clay, shale, and limstone, constituents for manufacture of Portland cement, are present in unlimited quantities. Missouri is the leading lead and zinc producer in the Union. Most of the lead is obtained in St. François County. Mine LaMotte has been worked since 1720, and is still a heavy producer.

Agriculture. The chief occupation of the State is farming. The best farm lands lie to the north, and here the highest percentage of the land is in farms. The lowest percentage is in the southeast, except in the bottoms along the river. Cereals, hay and forage, potatoes, other vegetables, and fruit and nuts are the chief farm products of Missouri. Corn leads all crops in value. The oat crop is also enormous, but is generally exceeded in value by the common winter wheat crop. Large quantities of cotton are produced in the southeast. The cotton crop, sugar crops—principally sorghum—and the tobacco crop, showed great increase during the decade ended 1919.

Of the live stock on farms, hogs are raised in greatest numbers. The raising of beef and dairy cattle, horses, and sheep is also of very great importance.

Forests and Forest Products. The southern half of the State is heavily forested, the finest timbers being obtained in the east-central and southeastern portions. The principal merchantable timbers are oak, yellow pine, gum, tupelo, elm, cottonwood, walnut, sycamore, and cypress. Forest products on farms are an important item of Missouri's agricultural statistics.

Manufactures. Missouri is the second manufacturing state west of the Mississippi. St. Louis is a great live-stock market for the Western States, and in that city the slaughtering and meat-packing industry has assumed large proportions. The value of the output is a large share of the total for the State. Missouri is the center of the hog-raising and cattle-feeding area.

Missouri is one of the leading states in the production of boots and shoes. Flour and grist mill products are high in order of value, many of the establishments being small and in rural localities. Other important industries are printing and publishing, manufacture of malt beverages, lumber and timber products, foundry and machine-shop products, men's and women's clothing, tobacco products, roasting and grinding of coffee and spice, bakery products, and railway cars. The products of many other industries are of considerable annual value, one of the most characteristic being the manufacture of "Missouri meerschaum" (corncob) pipes.

Important manufacturing cities are St. Louis (one of the leading manufacturing cities in the United States), Kansas City, St. Joseph, Springfield, Joplin, Hannibal, Jefferson City, Sedalia, Moberly, and Webb City.

Transportation. A great network of steam railways spreads over Missouri, and, with the addition of about 1,098 miles of electric lines, provides ample facilities for commerce and transportation to all parts of the United States. Kansas City and St. Louis are important centers for the grain and live-stock trade of the West. Large river steamers navigate the Mississippi to St. Louis; and the Missouri waterway to Kansas City is becoming of increasing importance. There are more miles of navigable rivers on and within the borders of Missouri than in any other State in the Union.

Defense. The National Guard units of Missouri consist of one brigade of infantry, two regiments of field artillery, one regiment of engineers, and a tank company. On November 30, 1925, there were 275 officers and 4,360 enlisted men in the organization.

History. The French missionaries, Joliet and Marquette, descended the Mississippi in 1673, to below the southern boundary of Missouri. It is thought that De Soto, too, may have reached the Mississippi on the Missouri boundary, when he traveled from the southeast in 1541. In 1681 and 1682, La Salle sailed down the Mississippi to its mouth. Traders and adventurers followed the early explorers, and various settlements were established by the French. Old Ste. Genevieve was founded in 1755, and St. Louis was established as a trading post in 1764. About 1720, lead was discovered; and at about the same time, the mine La Motte was opened.

Missouri reverted to the United States in 1803 by the purchase of the Louisiana region from Napoleon. Immigration into the State was rapid. In 1818 Missouri made application to be admitted to statehood. In 1821, after three years of bitter controversy over the slavery question, Missouri was admitted to the Union by the famous Missouri Compromise, which permitted slavery within the State, but excluded slavery in all the rest of the Louisiana Purchase north of the southern boundary of Missouri.

Secession resolutions adopted by the pro-slavery group of the legislature were recognized by the Confederacy; but anti-slavery adherents in the convention were of sufficient strength in later elections to control the government and disfranchise the secessionists. The constitution of 1865 abolished slavery outright. Missouri furnished 109,111 men to the Union, and 25,000 or 30,000 men to the Confederacy. The State was not subjected to reconstruction.

Places of Interest. The Ozarks are full of beautiful pleasure resorts. At Eldorado Springs, one of the most beautiful, are located fine mineral springs. At Excelsior Springs are wells famous for their curative properties. Hahatonka is one of the largest springs in the Ozarks.

Hannibal has been made famous by Mark Twain. Jefferson City, in Cole County, is interesting as the State capital. Jacob's Cavern in the Ozarks, near Pineville, is famous for relics of the stone age; and Marble Cave, near Roark, for its beauty.

Ste. Genevieve is the oldest settlement in Missouri, dating from 1755.

KANSAS

Area. Kansas ranks twelfth in land area among the states of the Union. The total area, including 384 square miles of water surface, is 82,158 square miles.

Population.

Year	Population	Year	Population
1870	364,399	1900	1,470,495
1880	996,096	1910	1,690,949
1890	1,428,108	1920	1,769,257

More than 65 per cent of the inhabitants live in rural territory, though the proportion of urban population is rapidly increasing. The west third of the State is somewhat scantily populated.

Topography. The entire State is practically an undulating plain, rising gradually from the eastern border to about 4,000 feet on the western border. The lowest section of the State, in the southeastern part, is 725 feet above sea level. Kansas may be said to have three physiographic regions within its boundaries—first, a small portion of the Ozark uplift in the extreme southeastern corner; second, the prairie plains, covering approximately the east third of the State; third, the great plains, comprising the remaining area. A succession of broad plains, isolated hills and ridges, and moderate valleys diversify the rolling prairie surface. In some parts there are terraced uplands, and in others undulating plains cut by erosion into steep declivities. The valley of the Cimarron, in the southwest, has deep cuts, almost gorges. The bluffs on the Missouri River are in places 200 feet high. The extreme west is distinctively hilly, with an area of sand hills below the Arkansas.

Climate. While extremes of heat and cold are great, as a rule the winters are dry. In summer the heat is tempered by the prairie breezes, and the nights are cool and refreshing. The average temperature for seventeen years was 54.3°. The absolute extremes were 116° in summer, and 34° below zero in winter, though considerably less in the south and southeast portions. The precipitation diminishes somewhat regularly toward the west. The line of twenty-inch fall approximately bisects the State. The rainfall is largely during the growing season, between April and October. There are from 150 to 175 growing days for crops between the frosts of spring and autumn, and eight out of ten days are favored with sunshine.

Soils. The soil of Kansas is composed principally of a dark, rich loam, formed by the accumulated mold of vegetation of ages, mixed with fine, siliceous grains of sand and lime. The northeastern counties north of the Kansas River and east of the Big Blue River, lie within the glacial portion of the plains region. The soil of this region is derived principally from the loess covering, and is a brown or yellow, silty loam, well adapted to the production of general farm crops. In the southeastern and central part of Kansas, the soils have been formed by the weathering of the underlying rocks, and constitute a portion of the residual prairie region. They are mainly silty loams and clay loams, brown or gray in color. Northwestern Kansas is covered by a thick deposit of loess. The silty soils derived from the loess merge gradually into similar silty soils derived from the "plains marl," which cover most of the southwestern part of the State.

Mineral Resources. The production of petroleum and natural gas and bituminous coal mining are the principal mineral industries of the State. Lead and zinc mining and limestone quarrying are the industries next in importance. The coal is found entirely in the eastern part of the State, in immense beds, frequently at shallow depths or cropping out of the surface. Natural gas, oil, zinc, and lead occur in southeastern Kansas, and have given that section an extraordinary growth and prosperity. Natural gas has displaced coal for fuel in a large section of southeastern Kansas, and has given a new impetus to the manufacturing interests. Salt is produced in immense quantities in the central region within a great north-to-south belt from Hutchinson. Beds of solid salt from 300 to 400 feet in thickness cover an area of from 15,000 to 20,000 square miles. Gypsum is found in an almost continuous bed across the State, running northeast and southwest. There are also sandstone, marbles, shell marble, white limestone, bandera flagstone, and hydraulic cement. Pottery, fire clay, ocher, and brick clays are abundant, the first two mainly in the eastern part of the State. There are over one hundred medicinal mineral springs in Kansas.

Agriculture. The principal source of the State's wealth is agriculture. About 70 per cent of the farm lands are classed as "improved" lands. Wheat, in both acreage and value, is the leading crop, 1924, exceeding in acreage all other cereals combined, and being over double the wheat output of any other State. Winter wheat constitutes nearly the entire output. The hard variety ranks with the finest Minnesota wheat. The wheat belt crosses the State from north to south in its central third. In the western third of Kansas, the rainfall is insufficient for Indian corn; but kafir corn, an exceptional drought-resisting cereal, has made extraordinary progress. Indian corn has an acreage about one-third as large as that of wheat. Oats are the third great cereal crop. Hay and forage show an acreage more than one-fourth as great as that of all cereals combined, but in value the proportion is somewhat lower. Potatoes, sorghum seed, flaxseed, and broom corn are important crops both in acreage and value. The climate is admirably adapted to the growth of apples, pears, peaches, plums, grapes, and cherries. The smaller fruits also flourish. Sugar-beet culture has extended along the Arkansas Valley from the Colorado beet district and into the northwest counties. Irrigation is practiced in western Kansas.

The raising of live stock is stimulated by the enormous demand for beef-cattle at the Kansas City market. Western Kansas is a prosperous dairy country.

Manufactures. Kansas is not characterized by its manufactures. Only a small percentage of the total population is engaged in this branch of industry, which has largely been the outgrowth of the extensive agricultural resources, and in recent years has been much stimulated by the development of rich zinc and coal mines, and by the discovery of oil and gas. As Kansas is one of the leading stock-raising centers of the country, slaughtering and meat-packing is by far the most important industry in the State. Only one State, Illinois, ranks ahead of Kansas in this respect. Kansas City is the second largest meat-packing city in the country. It has one of the largest single packing plants in the world. Flour and grist mill products also hold high rank. Other manufactures are petroleum refining, railway cars, cheese, butter, and condensed milk, machine shop products, salt refining, refined zinc and lead, cement, and glass.

Transportation. Railways in Kansas have an approximate length of 9,486 miles, connecting with Chicago and the East, the Gulf, and the Pacific Coast. There are about 581 miles of electric roads. Kansas has an eastern river front of about 150 miles on the Missouri, which is navigable for steamboats.

Defense. There were, on November 30, 1925, 232 officers and 3,225 enlisted men in the National Guard of Kansas. They made up one regiment of infantry, one brigade of field artillery, one regiment of cavalry, and a signal company.

History. Kansas derives its name from the Kansa (Kaw) Indians, who once inhabited a large area along the Kansas or Kaw River. The meaning of the word is "swift river." The region was first visited by white men in 1541, when Coronado traversed it from southwest to northeast. The country remained unexplored until 1719, when it was visited by Frenchmen from Louisiana. As a portion of the Louisiana Purchase, a great part of this section passed into the possession of the United States in 1803. The region was explored by Lewis and Clark in 1804, Lieutenant Pike in 1806, and Lieutenant Long in 1819. The "Santa Fé Trail" was established in 1824, marking the beginning of the development and growth of Kansas. Fort Leavenworth was established in 1827, and troops stationed there. In 1854 the Territory of Kansas was organized; and settlers in large numbers flocked in, founding Leavenworth, Topeka, and many other towns.

In 1856 the question of whether Kansas should be admitted into the Union as a free or slave state led to civil war in the Territory. In 1859 a constitution prohibiting slavery was adopted, and in 1861 Kansas was admitted to the Union.

Places of Interest. Among the historic points are Fort Leavenworth, founded as a pioneer post in 1827; Fort Scott, one of the early settlements; and Ossawatomie, the home of John Brown. At Dodge City, on the meridian between central and mountain time, is located the State Soldiers' Home.

OKLAHOMA

Area. The gross area of Oklahoma is 70,057 square miles, of which 643 square miles are water surface. The State ranks seventeenth in size in the Union.

Population.	Year	Population	Year	Population
	1900	790,391	1920	2,028,283
	1910	1,657,155		

Oklahoma's inhabitants are pretty evenly distributed over the State, the slightly greater densities being found in the northeast and central parts. Tulsa County, containing Tulsa City, has the highest density; and Cimarron County, the lowest. In the period from 1900 to 1920, the density of population increased from 11.4 to 29.2 per square mile. There are about 57,300 Indians; but this race has declined almost a third since 1910. Negroes number 149,408.

Topography. The eastern portion of the State is mountainous, divided into a northern and a southern section by the Arkansas River. Numerous ranges of mountains are separated by extensive stretches of plateau country and forest land. This mountain region is succeeded to the west by wide, rolling prairies, and farther by the High Plains, the whole region rising steadily toward the west and north (highest elevation, 4,700 feet), where the surface becomes rough and broken, with deeply eroded canyons, mesas, and buttes. Near the southern boundary the prairies are broken by the Arbuckle Mountains, and in the southwest by the Wichita Mountains, a rugged, straggling mountain mass. The southern border of the State lies in the Coastal Plain, and is the region with the lowest altitude.

Climate. The mean annual temperature ranges from 57° Fahr. in the extreme northwest, to 62° in the southeast. At Oklahoma City the mean temperature is 59°. The west and central parts of the State are cooler and drier than the east, according to the greater elevation and the distance from the sea. The mean annual precipitation varies from seventeen inches in the extreme west, to forty inches in the east. Irrigation is extensive in the western sections.

Soils. The soils of the east are derived chiefly from shales and limestone formations of the Ozark uplift; northeast they are gray silty and stony loams; east-central they are sandy loams, loams, and clays; and in the south and southeast on the Coastal Plain, the soils are dark-colored clays, clay loams, and sandy loams, with extensive alluvial bottoms along the Red River. The soils of this eastern section are well adapted to agriculture.

The soils of the prairies are brown or red sandy loams derived from the underlying Permian red beds. Broad belts of sand hills occur along the northern banks of the chief rivers. On the High Plains are gravelly loams, sandy loams, and sands. Many of the river valleys have extensive alluvial bottoms. In the northwest are several large salt plains.

Minerals. Oklahoma produced 160,922,000 barrels of petroleum in 1923, second only to California. The State is second in production of natural gas, first in zinc and fourth in tin. It produces nearly 3,000,000 tons of coal annually, as well as clay products, cement, gypsum, stone, and mineral waters.

Agriculture. Over 45 per cent of the crops of Oklahoma in 1919 was contributed by cereals, and 29 per cent by cotton. State ranked second in cotton, 1924, producing over 1,000,000 bales. Cotton is raised chiefly in the southeast, and wheat, the leading cereal, in the west and north. Other cereals are corn, oats, kafir corn and milo maize, barley, emmer and spelt, rye, and buckwheat. Hay and forage is a prominent product of the State, and alfalfa a large hay crop. The State ranks first in production of broom corn. Tobacco, potatoes, sorghum, peanuts, fruits, and vegetables are also products of considerable importance in Oklahoma.

The western lands and the High Plains region are chiefly devoted to stock-raising. Except in the far western portion, stock-raising on the once extensive cattle ranges is giving way to the raising of cattle on farms. Numerous cattle, dairy cows, horses, sheep, and swine are raised.

Forests. Valleys are still quite thickly wooded, but of the original pine forests of 2,000,000 acres, only 500,000 acres were left in 1920, and 450,000 acres of cut-over land were idle. Estimated pine stand, over 4½ billion feet. Total cut, 1924, 154,000,000 feet, chiefly yellow pine. Other trees are cottonwood, elm, walnut, hickory, ash, pecan, cedar, tupelo, and oak.

Manufactures. Manufactures in Oklahoma were long based chiefly on its agricultural products, but in late years the development of the oil fields and the resultant cheapness of fuels have done much to attract independent industrial activities. There were in 1923 about 1,242 manufacturing establishments in the State, with about 25,000 wage-earners, and products yearly of over 315,000,000 dollars. Petroleum refineries, flour and grist mills, zinc and lead smelters, cotton ginneries, and cottonseed oil and cake mills take precedence. Other important industries are lumber and timber mills, printing and publishing, railway shop construction, foundry and machine shop products, dairy products, brick and tile, and slaughtering and meatpacking. The industrial development has been great and rapid.

Chief cities are Oklahoma City, Tulsa, Muskogee, Okmulgee, Enid, Shawnee, Bartlesville, Ardmore, McAlester, Guthrie, Sapulpa, and Chickasha.

Transportation. Facilities for railway transportation have been greatly developed during the past few years, the State having to depend on railways almost entirely for communication and trade. The rivers are of little value for transportation. An intricate network of railroads now afford good connection between the principal manufacturing centers and the outside country.

The first railway in the State was the Missouri, Kansas & Texas, built in 1872. Electric railways are increasing in mileage and importance as produce and passenger carriers.

Defense. Oklahoma's 5,308 members of the National Guard comprise a brigade of infantry, two regiments and one battalion of field artillery, an ambulance company, the 45th Division special troops (motorcycle, tank, signal, etc.) and quartermaster's train.

History. The first white man to visit the region was De Soto in 1541. During colonization, the greater number of settlers entering the region were French and Spaniards. With the purchase by President Jefferson of the great Louisiana country from Napoleon, the land now included in the boundaries of Oklahoma became United States territory. As this great region was divided into Territories, Oklahoma belonged successively to the Territories of Louisiana, Missouri, partly to the Indian Country, and partly to Arkansas. In 1834 the whole section comprising the present State of Oklahoma, except a narrow strip just north of Texas, was set apart by Congress for the five southern Indian tribes—the Cherokees, Creeks, Seminoles, Choctaws, and Chickasaws, and the Quapaw Agency. After the treaty of 1866, these Indians permitted the entry of other Indians, and Sacs and Foxes, Osages, Kansas, Otoes, Nez Percés, Shawnees, Poncas, Missouris, Pottawatomies, Wichitas, Pawnees, Kickapoos, Iowas, Kiowas, Comanches, Apaches, Cheyennes, Arapahoes, Sioux, and others were admitted. The country was called Indian Territory, and was reduced to the present boundaries of Oklahoma, exclusive of the western counties, by the Kansas-Nebraska Act in 1854. In 1889, a large tract of land in the district known as Oklahoma was thrown open by Presidential proclamation to white settlers. This district was organized as Oklahoma Territory the following year.

Gradually the whites permeated the entire region. The loose system of authority made the country a refuge for fugitives from justice; and it was evident that steps had to be taken toward the formation of a stronger government. Each of the five tribes in Indian Territory exercised its own form of local self-government. With a view to improving conditions, the Dawes Commission was appointed in 1893, to prepare the Indians for individual allotment of land. In 1898 the work was completed, and the allotment legally established by the Curtis Act. In 1906 the Territory of Oklahoma and Indian Territory united to draw up a constitution, and in 1907 they were admitted to the Union as the single State of Oklahoma.

Places of Interest. In southwestern Oklahoma, a picturesque area of prairie, mountain, and timber land, comprising a total of 61,480 acres and including the most notable peaks in the Wichita Range, was designated by President Roosevelt as a national game reserve. Bears, wolves, and deer are numerous. In Murray County in the Arbuckle Mountains near the southern border, is the Platt National Park, with several flowing springs.

ARKANSAS

Area. Arkansas, with an area of 53,335 square miles, of which 810 square miles comprise the water surface, ranks twenty-sixth in size among the states of the Union.

Population.

Year	Population	Year	Population
1890	1,128,211	1910	1,574,449
1900	1,311,564	1920	1,752,204

The majority of the inhabitants of the State live in rural territory, only 16.6 per cent occupying cities and incorporated towns of 2,500 or more persons. Negroes are 27 per cent of total population.

Topography. The surface of this State ranges approximately from 100 feet above sea-level in the southern part of the alluvial bottoms, to an altitude of about 350 feet along the boundary of the uplands, and over 2,800 feet in the mountain regions. The Mississippi River and its tributaries are bordered by broad alluvial bottoms, above the surface of which rise the more undulating and elevated Coastal Plains. Within the latter division are numerous nearly flat inter-stream prairies and more rolling uplands. In the northern part of the State are located the Boston Mountains, their northern border forming a portion of the Ozarks. The Arkansas River bisects the State from the northwest to the southeast, and joins the Mississippi. Rough and elevated ranges of the Ouachita Mountains occupy the west-central part of the State. The rolling valley of the Arkansas winds between these elevated areas.

Climate. Owing to the difference of elevation and the many sheltered valleys, the climate of Arkansas is decidedly mild. The season in the southeast is three weeks in advance of that in the northern part of the State. The rainfall is abundant, but the days with clear skies and sunshine predominate. The intense cold of the north and the extreme heat of the south are never known. The seasons of seedtime and harvest are long, and the winter period is short. The conditions are ideal for the growing of cotton, corn, rice, and a variety of fruits. Stock live, for the most part, on the ranges during the winter months. The mean seasonal temperatures from winter to autumn are 41.6°, 61.1°, 78.8°, and 61.9°, respectively.

Soils. The soils of the alluvial bottoms are principally heavy silty loams and clays, while some sandy loams are found along the front lands and bayous. The bottom land soils are largely timbered, but cotton and corn are grown on the cleared fields. The southern part of the State is occupied by sandy and sandy loam soils. In the upland portion is found a gray silty or fine sandy loam. The soils of the Boston and Ouachita Mountains range from stony and sandy loams to heavy loams. A considerable part of this region is still wooded.

Mineral Resources. Arkansas has a great variety of minerals, but their development has been limited. Between 1919 and 1922 the value of the State's mineral production increased from ten to thirty million dollars. Petroleum is the most valuable product: 12,712,000 barrels were produced in 1922. Coal ranks second in value. Over 86 per cent of the country's bauxite (aluminum ore) comes from the State. Natural gas is found in quantities and mineral waters are abundant.

Other important mineral products are clay, gypsum, lead, lime, manganese, stone, and zinc. Diamonds were found in 1906 in Pike County, the only place in North America where they have ever been found in their original condition.

Agriculture. Arkansas is essentially an agricultural State. It is favored by both climate and soil, giving a great diversity of crops. Almost always two and often three crops may be raised on the same tract of land in one year. The agricultural products of Ohio, Indiana, Illinois, and Kansas yield equally well in Arkansas. In cotton-production, the State ranked fifth in 1923, with over 628,000 bales to its credit and third in production of rice.

There are two distinct agricultural sections: the northern or upland region, producing cereals and temperate zone crops; and the southern division, consisting largely of lowland ground and alluvial soil, producing cotton, tobacco, rice, and other representative southern crops. More than one-half the land area is included in farms. Northern Arkansas produces great quantities of corn, and wheat, oats, potatoes, hay, and forage are among other northern crops.

The fruit industry has shown particularly rapid development, and Arkansas is now among the leading fruit states of the Union. The pursuit is carried on chiefly in the northwest, and the principal fruits produced there are apples and peaches.

Stock-raising, particularly of cattle, swine, horses, and mules, is an important agricultural pursuit in Arkansas. The wool clip from sheep raised in the State has considerable value.

Forests. Woods of great variety and richness cover about three-fourths of the State. Over one-fourth of the total area is pine lands, of which over 1,300 square miles have been cleared and are lying idle. Virgin forests of Southern yellow pine in 1921 covered over 1,100-000 acres, with merchantable stand of about 15½ billion feet. Oak is the next most abundant and useful tree. Black walnut is very valuable; and other useful trees are cypress, ash, yellow poplar, and sweet gum. National forests in State cover 900,000 acres.

Manufactures. There is great diversity in manufacturing activities, although the value of the products does not rank high compared with that of some other states. The lumber and allied industries employ about two-thirds of the wage-earners. Lumber cut, 1924, was 1,536 million feet (nearly 5 per cent of country's output), over half yellow pine, which at this rate will last only about 20 years. Other manufactures are cottonseed oil and cake, flour, rice products, cars, wagons, furniture.

Transportation. Railroad facilities are good, except in the mountainous regions of the north and west-central sections. Three trunk lines traverse the State from north to south, all centering in St. Louis, thus placing all sections of the State in direct communication with the great commercial metropolis of the Mississippi Valley. These roads, with their connections, penetrate the states of Texas and Louisiana to the Gulf, and furnish outlets to the north or south for the surplus productions of the State. Numerous smaller lines and branches intersect the State in all directions, placing the larger cities in connection with one another and acting as feeders for the commerce of the main lines. Arkansas has over 3,000 miles of water available for commercial purposes, forming almost a complete system of river communication. The Mississippi River gives the State communication with the Atlantic Ocean; the Arkansas River is navigable for 500 miles, the Red River for 300 miles; the St. Francis, the White and Black rivers, and several others are available for steamboats, and about 500 additional miles for barges and rafts. Foreign commerce, consisting principally of cotton and lumber export, is carried on through the port of New Orleans.

Defense. On November 30, 1925, the National Guard of Arkansas consisted of 140 officers and 2,163 enlisted men. They were organized as one regiment of anti-aircraft artillery and one regiment of infantry.

History. Arkansas takes its name from an Indian tribe called Akansa, which once inhabited the land. The country was first visited by white people in 1541, when DeSoto, the Spanish explorer, penetrated the northern portion. In 1685, Frenchmen established a settlement at Arkansas Post. The land was part of the Louisiana region which was purchased in 1803 from the French Government by the United States. Arkansas formed a part of the Louisiana Territory until 1812, and of Missouri Territory until March 2, 1819, when it was organized as Arkansas Territory. In 1828 the present boundaries were definitely established; and on June 15, 1836, Arkansas was admitted into the Union as a State.

Places of Interest. Arkansas is the land of springs, many of whose waters hold in solution various mineral curative properties. Hot Springs is the most noted watering place. The springs here are one of the great natural curiosities of the world. Seventy-four streams of hot mineral waters issue from the mountain side, from 50 to 75 feet above the valley and from 650 to 700 above sea-level. They are annually visited by thousands of tourists. The Government owns the reservation upon which the baths are located, and controls the operation of the bath houses.

At the town of Heber are six springs, which break out close together, but are quite varied in their chemical and medicinal properties.

The White Sulphur Springs are located at Searcy, and are said to possess great healing properties.

LOUISIANA

Area. The total area of Louisiana is 48,506 square miles. Water surface comprises 3,097 square miles, including 1,060 square miles of landlocked coastal bays, called lakes. The State ranks thirtieth in land area among the states of the Union.

Population.

Year	Population	Year	Population
1900	1,381,625	1920	1,798,509
1910	1,656,388		

Negroes numbered 713,874 in 1910, and 700,257 in 1920, declining from 43 to 38.9 per cent of total population in the decade. About two-thirds of all the people are rural.

Topography. The average elevation of the State above sea-level is estimated at 100 feet. Practically the only parts above 400 feet are in the northwestern section. About one-third of the State consists of the alluvial lands of the Mississippi and the Red rivers and their tributaries, generally less than fifty feet above tide level. The northern, northwestern, and extreme eastern portions are part of the rolling to hilly Coastal Plain bordering the alluvial bottoms. In the southwest, prairie areas become increasingly common. The prairies shade off into the coast marshes. To prevent overflow in the bottom lands, artificial embankments, known as levees, which extend for 1,430 miles, have been constructed along the sides of these streams.

Climate. Throughout the State the climate is materially influenced by the prevailing winds from the Gulf of Mexico. It is semi-tropical and exceptionally equable over large areas. Though the summers are prolonged, the heat is never oppressive, the thermometer rarely reaching 95°. The winters are usually mild, with an average of 53° in the southern and 45° in the northern part of the State. Rainfall is usually heavy in the southeast, but markedly decreases toward the northwest. The average precipitation for the entire State is fifty-five inches.

Soils. Along the eastern bank of the Mississippi, there occurs a small area of yellow or gray silty loam known as loess. Within the alluvial bottoms, fine sandy loams and loam soils occur at the higher elevations immediately along the principal streams, while the lower elevations are occupied by heavy silty clays or clay soils. The soils of the rolling Coastal Plain are chiefly sands and sandy loams, although some clay soils are also found. The prairie region in the southwestern part of the State is occupied principally by a gray silty loam soil, which has been irrigated extensively for the production of rice.

Mineral Resources. While the mineral resources of Louisiana are few, they are important. The principal products are petroleum, natural gas, salt, and sulphur. In 1862, large deposits of very pure rock salt were discovered on Petite Anse Island. The deposit is, in places, 1,000 feet thick, and yields salt of extraordinary purity. The State ranks fifth in salt production. In southwest Louisiana, around Sulphur, in Calcasieu County, is one of the richest sulphur mining districts in the world; and Louisiana furnishes the bulk of our sulphur output. It is estimated that 40,000,000 tons of sulphur underlie the surface here. Petroleum was discovered in the State nearly fifty years ago. The State ranks sixth in the production of petroleum, producing 24,919,000 barrels in 1923. Lignite of fine quality and in large quantity is found in the Dolet Hills. Good brick clays are abundant in the alluvial and bluff formations. In the Grand Gulf Hills, white clays are found. There is natural gas around Shreveport, and the State ranked fifth in output, 1923. Sandstone occurs, as well as iron, gravel, and marls.

Agriculture. The chief industry of Louisiana is agriculture, and cotton is the most important crop. The hill lands of the State will yield one-half bale of cotton to the acre, while the alluvial lands yield from one to one and one-half bales. Louisiana holds first place in the value of the sugar-cane crop, most of which is grown in the delta region. There are about 234,000 acres devoted to sugar cane in the State. Ranking first among the states in rice production, all the prairie district of Louisiana has been transformed into one great rice field. Some rice is also grown on the lowlands of the Mississippi Valley. Irrigation is almost entirely confined to the rice farms. In the Mississippi Valley, water is taken from the river by flumes in the levees or by siphons. Indian corn, potatoes, forage crops, cow peas, and tobacco are also grown. Many of the fruits of semi-tropical lands, whether native or exotic, including oranges, olives, figs, grapefruit, and pomegranates, are cultivated.

Large numbers of swine, cows, horses, and sheep are raised.

Forests and Forest Products. Louisiana has a large forest area, one of the most extensive of its kind in the United States, and stood next to Washington and Oregon in 1924 in timber production. The heaviest growth of longleaf pine in the world is found in the southwestern portion of the State. The principal timbers cut are yellow pine, cypress, oak, cottonwood, red gum, tupelo, ash, and hickory.

Fisheries. The State ranks first in the production of shrimps, and high in the production of oysters.

Transportation. There are approximately 5,109 miles of railroad, which reach all portions of the State and afford quick transportation. Fast daily trains connect the truck-growing sections with northern markets, and this industry has grown to enormous proportions. Inland waterways have always been important in northern, eastern, and southern Louisiana, where there are systems of improved bayous, lakes, and canals, which, with the levees, make this region resemble Holland on a greater scale. The canal system is especially well developed in the parishes of the Mississippi Delta, and is of decided commercial importance.

Manufactures. A large proportion of the materials used in the manufactures of Louisiana is furnished by the forests of the State and by the sugar-cane, cotton, and rice fields. The early development of manufactures was retarded by the difficulty in obtaining a sufficient supply of fuel; but the opening of short canals and improvement of waterways and railroad facilities have materially reduced the cost of transportation of coal, as well as of other commodities. The rapid development of oil fields in the South, particularly in Texas, affords a cheap substitute for coal, and has given an increased impetus to manufacturing. New Orleans, the most important Southern port, has excellent facilities for domestic and foreign commerce. The leading industry is the manufacture of cane sugar and molasses. The lumber industry, second in importance, is centered chiefly in the southwest, and in some localities small quantities of resin and turpentine are taken from the longleaf pine. There are a great variety of other industries in Louisiana, chief of which are petroleum refining, the manufacture of cottonseed oil and cake, cleaning and polishing of rice, manufacture of bags used in handling cotton products, rice, and fertilizers, steel ship building, foundries.

Defense. The National Guard of Louisiana had 1,935 members in 1925, organized as one regiment of cavalry, one battalion of field artillery, one hospital company, and one squadron of cavalry.

History. In 1682 La Salle took possession of the entire country along the Mississippi River in the name of Louis XIV, in whose honor he named the region Louisiana. In 1717 the land passed into the hands of the Company of the West, under John Law, who proceeded to engineer his famous Mississippi scheme. New Orleans, founded in 1718, was made the capital in 1720. The Crown took command of the region in 1733, and in 1763 France ceded that part of Louisiana east of the Mississippi River, with the exception of New Orleans, to England, while the western part, including New Orleans, had been ceded to Spain the preceding year. The inhabitants revolted against Spanish rule, and threatened war. But the revolt was crushed. Spain relinquished her rights to France in 1800, and in 1803 the United States purchased Louisiana for $15,000,000. The purchase included a vast tract of land embracing parts of the present states of Louisiana, Mississippi, Arkansas, Missouri, Iowa, Minnesota, the Dakotas, Kansas, Oklahoma, Wyoming, Montana, and Colorado. In 1804 the Territory of Orleans was founded, and the following year the northern part was organized as the Territory of New Orleans. The State of Louisiana was admitted into the Union in 1812.

Places of Interest. New Orleans, the largest city in the State, and one of the principal seaports of the country, has many points of interest. French Town is the most marked feature of the place, with its varied attractions of ancient mold. Here may be seen the Cathedral of St. Louis, the second oldest built on American soil, and the Cabildo, in which the formal transfer of Louisiana to the United States was made. The city is the annual scene of the festival of Mardi Gras.

TEXAS

Area. The largest State in the Union, Texas comprises 265,896 square miles, of which 3,498 square miles are water surface.

Population.

Year	Population	Year	Population
1880	1,591,749	1910	3,896,542
1890	2,235,527	1920	4,663,228
1900	3,048,710		

Density of population shows a tendency to rise toward the east, Dallas County, containing the city of Dallas, having the greatest number of persons to the square mile. Rural population is a little more than double the total for towns with a population of 2,500 or over. Negroes are 15.9 per cent of total population.

Topography. Surface features of Texas are of great diversity, ranging from a low coastal plain to higher rolling prairies and timber land, which merge in the northwest into dissected uplands, deeply cut by gorges and ravines, with broad stretches of level to nearly flat plateaus. In the extreme southwest the prairies merge into high plains broken by the Cordilleran Ranges. Along the coast are a series of long, narrow islands and peninsulas inclosing lagoons.

The State is practically an ascending series of plains rising one to another toward the northwest, some gradually, and some abruptly.

Climate. The range of temperature varies much with locality and altitude. Along the coast farthest north the range is between extremes of 88° and 50° Fahr., while in Crosby County the range is from 90° to 26°. At Galveston on the coast, the climate is warm, moist, and equable, the warmth, moisture, and equability diminishing gradually inland with the rise in altitude and latitude.

In all except the western sections, rainfall is sufficient to insure successful crops without irrigation, the precipitation ranging from 10 inches in the west to 50 inches in the east.

Soils. The soils of the Coastal Plains are gray silty and fine sandy loams, merging to the north into brown and black sandy loam and loam soils. Southward are numerous alluvial bottoms consisting of red and brown sandy loams, or of black sticky clays. In the central prairies the soils are black waxy clays, with areas of loam and sandy loam along the margin. Other soils in the State are gray sands, sandy loams, loam and clay soils in the northeast, fine sandy loam soils of a red or brown color in the north central portion, and reddish brown gravelly loams, sands, sandy loams, and silty clay loams in the High Plains. The richest agricultural soils are the black soils of the central portion.

Mineral Resources. The mineral resources of Texas are considerable, the leading product being petroleum. The yield of the coal mines is large, and a considerable percentage of the total output of quicksilver in the United States is obtained in Texas. Other minerals worked are salt, cement, gypsum, granite, sandstone, limestone, gold, silver, asphalt, copper, lead, and zinc. Sulphur, phosphates, and natural gas also occur in varying quantities.

Agriculture. Texas is one of the leading agricultural states of the Union. The great crop is cotton, to which 14,150,000 acres was devoted in 1923. The value of the crop was over $735,669,000. Next in importance is the output of cereals. The grains, named according to value in the State, are corn, wheat, oats, kafir and milo, rough rice, barley, and rye. About 3,000,000 bushels of peanuts are grown yearly. There are over 18,000 acres in cane sugar, producing over 1,630,000 gallons of sirup. Hay and forage, Irish and sweet potatoes, broom corn, and sorghum are other important crops. Texas peaches and pecan nuts are famous. Apples, pears, grapes, figs, oranges are extensively grown.

Stock-raising is the leading agricultural industry of Texas. Vast areas of the State, principally west and north, are devoted to grazing, the plains of Texas providing a large part of the live stock for the great central cattle markets and slaughter-houses of the Middle West. Large areas of semi-arid land are thus utilized which would otherwise be of little agricultural value.

Forests and Forest Products. About 4½ per cent of the area of Texas is wooded, chiefly in the eastern sections. Yellow pine is the principal tree. Over a billion and a half feet of lumber were cut in 1924. Hardwoods, chiefly oak, are also cut.

Fisheries. The fisheries of the State are of considerable importance, the principal catches being oysters, shrimps, squeteagues, red snappers, and redfish.

Manufactures. The manufactures of the State are based chiefly on the agricultural and mineral resources. Slaughtering and meat-packing is the principal industry, followed by the production of lumber and timber, the manufacture of cottonseed oil and cake, cleaning and polishing rice, flour and grist mill products, and petroleum refining. Other industries, such as printing and publishing, foundry and machine-shop products, and car construction and repairs by railway companies, are of importance, but are not typical of the State.

The chief industrial cities are Dallas, Houston, Beaumont, Fort Worth, San Antonio, Sherman, Wichita Falls, El Paso, Galveston, Waco, Corsicana, Marshall, Paris, and Denison.

Transportation. Texas is the first state in the Union in railway mileage. The important systems are the Southern Pacific, the Texas and Pacific, and the Santa Fé. The long coast-line furnishes excellent facilities for ocean traffic. Galveston is the most important cotton port in the United States, and also holds very high rank as a general commercial port. There are several important canals in the State, and the Government has appropriated large sums for the improvement of waterways and harbors. Railroads are best developed in the eastern portion.

Defense. The Texas National Guard of 533 officers and 7,568 enlisted men in 1925 comprised the entire 36th Division, and in addition a regiment of cavalry and a machine gun squad.

History. The Texas region was first visited by Spaniards under Cabeza de Vaca in 1528–1536. They explored the southern end of the State in that period, and in 1540–1542 Coronado explored the northern part. Other visits were made by Spaniards, but they made few attempts to establish settlements. It was not until the arrival of the French under La Salle in 1685 that a colony was planted at Matagorda Bay, which, however, proved unsuccessful. The first permanent settlement was made by the Spanish at San Antonio in 1714. In 1728 the region became a Province of Spain under the name of Tejas or Texas, after a tribe of Indians inhabiting the country. After the Florida Purchase in 1819, the boundary of Spanish possessions was fixed. In 1821 Mexico won independence from Spain, and three years later Texas was made a part of a Mexican State.

Following the establishment of a dictatorship in Mexico by Santa Anna, in 1835–36, a revolution was fostered in Texas, and, following success, the Republic of Texas was established with Sam Houston as president. The republic was maintained until 1845, when the region was annexed to the United States. This precipitated war between the United States and Mexico. At the conclusion of the war, Spain relinquished all claims to Texas, which then included a large stretch of country north of its present boundaries. This region was sold to the United States in 1850 for $10,000,000, and afterwards formed part of the states of New Mexico, Oklahoma, Kansas, Colorado, and Wyoming.

Texas was one of the Confederate States.

Places of Interest. Historic interest attaches to the city of San Antonio, which contains the old Mission of the Alamo, the scene of the famous fight between Texans and Mexicans (March 6, 1836), in which Davy Crockett participated and was killed with all his comrades. San Antonio with its famous sulphur springs and fine climate is also widely known as a winter pleasure and health resort, frequented by thousands annually.

The vast sea wall at Galveston, the greatest cotton port in the country, is an object of much interest.

Mineral Wells, a city directly west of Fort Worth, is said to attract 150,000 visitors annually to its springs. The water is also widely shipped.

At San Marcos is located an interesting United States fish hatchery. At Shumla is one of the highest cantilever bridges in the world. Texas is full of famous oil regions, among which are Spindletop, Saratoga, Humble, Electra, Batson, Sour Lake, and Corsicana. Ysleta is an old Spanish settlement dating back to 1682.

TEXAS (2)

National Parks and Monuments

(*National Parks continued from page 44*)

Vicksburg National Military Park is a beautiful natural park, located near Vicksburg, **Mississippi,** which was created in 1899 to commemorate the siege and surrender of Vicksburg in 1863. Its area is 1,323 acres.

Wind Cave National Park, was created in 1903 to preserve a cavern containing many miles of galleries and numerous peculiar formations. The area, 10,899.22 acres, is located in southwestern **South Dakota.**

Yellowstone National Park, probably the best known of our National Parks, is located in northwestern **Wyoming,** encroaching slightly on **Montana** and **Idaho.** The region is volcanic, and contains more phenomena in the form of geysers, hot springs, colored basins, paintpots, etc., than any other area in the world. Beautiful scenic effects such as mountains, rivers, waterfalls, forests, and canyons, aid in making this park one of our most popular playgrounds. It was created in 1872 and contains 2,142,720 acres.

Yosemite National Park, situated near Wawona, **California,** was established in 1890 and covers 719,802.4 acres. The region contains valleys of world-famed beauty, great waterfalls, several groves of big trees, lofty mountain peaks, and deep canyons,—all combining to make this reservation one of incomparable beauty and splendor.

Zion National Park, in Washington County, **Utah,** is a region of great natural beauty and interest, which was established as a Park in 1919 after having been administered as a National Monument for 10 years. The area, is 76,800 acres in extent.

NATIONAL MONUMENTS

Aztec Ruins National Monument, situated near the town of Aztec in **New Mexico,** consists of a prehistoric ruin of the pueblo type containing over 500 rooms, which covers an area of 17.2 acres. It was presented to the United States by the American Museum of Natural History in 1928.

Bandelier National Monument in Sandoval County, **New Mexico,** covers an area of 22,075 acres. It contains a great number of cliff-dweller ruins, with artificial caves, stone sculpture, and many relics of prehistoric life. The monument was created in 1916.

Big Hole Battle Field National Monument, an area of 5 acres near Divide, **Montana,** was set aside by the United States in 1910 in commemoration of a battle fought August 9, 1877, between a small force of United States troops and a much larger force of Nez Perce Indians. The engagement resulted in a rout for the latter.

Cabrillo National Monument, consisting of one acre on a peninsula near San Diego, **California,** is of historic interest. At this point, Juan Rodriguez Cabrillo, who discovered the territory now partly embraced in the state of California, first sighted land on September 28, 1542. It was set aside as a monument in 1913 and 1926.

Capulin National Monument, a magnificent example of a recently extinct volcano, is situated in the center of a volcanic region near Folsom, **New Mexico.** It is a steep-sided, circular, cinder cone, with a platform at the base built up by successive flows of lava, covering an area of 681 acres. Created in 1916.

Carlsbad Cave, near Carlsbad, **New Mexico,** was set aside by the United States in 1923 as a National Monument. It has an area of 719.22 acres, which contains limestone caverns of extraordinary size and beauty.

Casa Grande National Monument, situated near Casa Grande in Pinal County, **Arizona,** covers an area of 472.5 acres, and contains some of the most noteworthy relics of a prehistoric age. The ruins were first visited in 1694 by Father Kino, the builder of the Tumacacori Mission, and his description indicates that they have been standing for at least two centuries in the same condition that they are today. Some of the pueblos, of which only the adobe walls remain, are believed to have been four stories high. Created as a monument in 1918, previous to which time it was administered as a National Park.

Castle Pinckney National Monument, located near Charleston, **South Carolina,** is a fortification which was built in 1810 to replace a Revolutionary fort. The area, 3.5 acres, was set aside by the United States in 1924.

Chalmette National Monument, at New Orleans, **Louisiana,** was created in 1907 to commemorate the Battle of New Orleans, 1815. It covers 17.47 acres.

Chaco Canyon National Monument, situated in the northern part of McKinley County, **New Mexico,** contains examples of prehistoric architectural skill which are without equal in the whole United States. The cultural material recovered from their abandoned rooms excels in variety, technique, and beauty of design that from any other archeological site in the entire southwest. The area was set aside by the Government in 1907 and covers an area of 20,629 acres.

Chiricahua National Monument, an area of 4,480 near Willcox, **Arizona,** was set aside by the United States in 1924. It is composed of natural formations known as the "Pinnacles," within the borders of Coronado National Forest.

Colorado National Monument, near Grand Junction, **Colorado,** is similar to the well-known Garden of the Gods area at Colorado Springs, only much larger, more beautiful and picturesque. It was created in 1911 and is 13,883 acres in extent.

Craters of the Moon National Monument, an area of 51,200 acres, was created by the United States in 1928. It is situated in the semi-arid portion of the Snake River Plateau, in **Idaho,** and contains remarkable volcanic, fissure eruption together with its associated cones, lava flows, caves, natural bridges, and other phenomena. As its name signifies, this weird region resembles the surface of the moon as seen through a telescope.

Devil Postpile, a National Monument of 800 acres, situated about five miles southeast of Yosemite National Park, **California,** was created in 1911. It consists of a spectacular mass of hexagonal, basaltic columns, which resembles an enormous pile of posts. It is said to rank with the famous Giant's Causeway in Ireland.

Devils Tower National Monument, near Moorcroft, **Wyoming,** contains a remarkable natural tower, about 1,200 feet high, composed of igneous rock. Its sides are fluted by great columns which stand nearly perpendicular except near the top where they round in, and near the base where they flare out. The area, 1,152 acres in extent, was created in 1906.

Dinosaur National Monument, situated near Watson, **Utah,** contains a deposit of dinosaurian and other prehistoric reptilian skeletons which is unequaled by any other region in the world. Among the remarkable specimens secured is the complete skeleton of the largest Brontosaurus known to science. It is 100 feet long and 20 feet high and stands in the Hall of Vertebrate Paleontology in Pittsburgh, Pa. The monument is 80 acres in extent and was created in 1915.

El Morro National Monument, in west central **New Mexico,** near Gallup, contains an enormous varicolored sandstone rock, rising about 300 feet out of a lava-strewn valley and eroded in such fantastic forms as to give it the appearance of a great castle. On its smooth sides are the inscriptions of many early explorers and travelers, the earliest being that of Don Juan de Oñate who passed by El Morro in 1606 on his return from a trip to the head of the Gulf of California. The monument covers an area of 240 acres. Created in 1906.

Fort McHenry National Monument, embracing 46.75 acres near Baltimore, **Maryland,** was established in 1925 to preserve the site of the "Star Spangled Banner."

Fort Marion National Monument, an area of 18.09 acres in St. Augustine, **Florida,** was created in 1924. It consists of a fort built by the Spaniards in 1656.

Fort Matanzas National Monument, also in St. Augustine, **Florida,** is a relic of the early Spanish Invasion in America. It is one acre in extent and was created in 1924.

Fort Niagara National Monument, an area of .0074 acres at Lewiston, **New York,** was created in 1925. It consists of a site for a cross to commemorate the cross erected by Father Millett in 1688 on what is now the Fort Niagara Military Reservation.

Fort Pulaski National Monument is situated at Pulaski, **Georgia,** and covers an extent of 20 acres. It was created in 1924 to commemorate the erection, in 1810, of a fort to replace Fort Greene of Revolutionary fame.

Fort Wood National Monument, in **New York City,** was created in 1924 as a permanent site for the Statue of Liberty. It is 2.5 acres in extent.

Fossil Cycad National Monument, near Minnekahta, **South Dakota,** consists of an area of 320 acres, created in 1922, to protect large deposits of fossil remains of fernlike plants of the Mesozoic period, which are of intense interest to scientists. Cycads were plants of the tree-fern type, and it is the fossils of these that first attracted scientific interest to this region about thirty years ago.

Gila Cliff Dwelling National Monument, about 40 miles north of Silver City, **New Mexico,** consists of numerous cliff-dweller ruins of much interest and in a well-preserved state. The area, 160 acres in extent, was created in 1907.

Glacier Bay National Monument, located on the southeast coast of **Alaska,** has an area of approximately 1,820 square miles. It was created in 1925 and includes a number of tidewater glaciers of first rank in a magnificent setting of lofty mountain peaks, which present a unique opportunity for the scientific study of glacial action.

Gran Quivira National Monument was set aside by the Government to protect the ruins of the earliest Spanish church or mission in the southwest. This interesting historical landmark covers an

(*Continued on page 128*)

NEW MEXICO

Area. The gross area of New Mexico is 122,634 square miles, of which 131 square miles are water surface. The State ranks fourth largest in the Union.

Population.

Year	Population	Year	Population
1880	119,565	1910	327,301
1890	160,282	1920	360,350
1900	195,310		

Bernalillo County, where the city of Albuquerque is located, reported in 1920 the highest density of population in the State, or 24.6 persons per square mile; and Lea County the lowest, with 0.8 person per square mile. The United States census reports indicate that eighty-two out of every hundred persons in the State are living in rural territory. In late years, extensive irrigation projects by the Government are resulting in a rapid increase in population. Indians number 19,512 (Navajo, Apache, Pueblo), and there are many Mexicans, but both these elements are decreasing.

Topography. New Mexico lies partly in the Great Plains region, and partly in the Rockies. The Rockies enter the State in the north-central portion; and ranges of mountains with intervening valleys break up the plateau land of the north and west. Foothills succeed the mountains to the east, followed, east and south, by the rolling and dissected lands of the Great Plains. From the center of the State, the slope toward the southeast is marked, having a fall of about 4,200 feet. The Continental Divide crosses the State in the northwest. Alkali flats are of frequent occurrence in the southern and western mountain valleys. In the south-central portion is an extensive area of white sand dunes, furnishing an inexhaustible supply of gypsum. The Great Plains region in the southeast is an arid tableland, a continuation of the llanos of Texas. In the north and west, the mountains abound in wonderful scenic effects. Extinct volcanoes, mountains, buttes, and lava tables are scattered in picturesque confusion. The mesa or flat-topped hill is a characteristic feature of the landscape. The highest peak is Cerro Blanco (14,269 feet). The Truchas Peaks, near Santa Fe, reach 13,306 feet.

Climate. The climate of the State is characterized by lack of humidity, the winds from the southwest having been almost completely desiccated in crossing the Texas plains. There is great daily variation in temperature. At Santa Fe the mean annual temperature is 49° Fahr., 31° in the winter and 67° in the summer. Rainfall varies with the altitude. On the high plateaus the precipitation is sufficient for grain crops without irrigation, but in the river valleys irrigation is necessary. Rainfall varies from six inches annually in the Rio Grande and San Juan valleys, to twenty inches on the plateau.

Soils. The soils of New Mexico range from sandy and gravelly material, to heavy loams in the river valleys. On the mountainous plateau, the soil is formed by the weathering of the underlying rocks, and is well adapted for grazing lands. In the desert valleys is a gravelly and sandy detritus containing alkali.

Mineral Resources. New Mexico contains mineral deposits of great value. The leading gold and silver producing counties are Socorro, Grant, and Sierra. Dona Ana County is silver-producing only. Copper is one of the most valuable mineral products of the State, the larger part coming from Grant and Otero counties. Other important minerals are zinc and lead. There are numerous quarries of granite, limestone, sandstone, and marble. Gypsum is present in inexhaustible quantities; turquoise and garnet occur.

The most important mineral product is coal, which is found in all grades from lignite to anthracite, in widely distributed areas. The chief coaling centers are in Colfax, McKinley, Rio Arriba, Lincoln, and Santa Fe counties.

Agriculture. Almost one-third of the State's land area is in farms. In 1920, the acreage in farms had increased to more than double the figure in 1910; and improved land had also increased considerably. In 1919 over 538,000 acres were under irrigation; and dry farming also has reclaimed much arid land. One of the characteristics of agriculture in New Mexico is the great area utilized only for grazing. Hay and forage are the leading crops, followed by cereals, potatoes and other vegetables, fruits, and nuts. In ten years, from 1910 to 1920, the value of crops increased over fourfold, but has not advanced since then. Corn is the leading cereal, followed by wheat, oats, kafir corn, and milo maize. Considerable cotton, broom corn, and sugar beets are produced. Fruit (apple, peach, fig, etc.) is also extensively grown.

Stock-raising is the most important industry in the State. Ranches are most extensive in Bernalillo, Guadalupe, Rio Arriba, San Miguel, Union, and Valencia counties. In recent years the number of sheep raised is decreasing, and the number of neat cattle increasing.

Forests. National forests covered 8,482,315 acres in 1925, and 4,000,000 acres more of woodland were in private hands. Western yellow pine predominates. Other trees are Engelmann spruce, red fir, ash, box-elder, scrub oak, cedar, mesquite, piñon, cottonwood, sycamore, and walnut.

Manufactures. In New Mexico, manufacturing is still in its infancy, but more than doubled its output in the years 1914–23. The leading manufacturing industry is car building, general shop construction, and repairs by railways. This industry employs a greater number of workers, and produces to a greater value, than any other industry in the State. Lumber camps, sawmills, and planing mills, flour and grist mills, bakeries, fruit canneries, wool-scouring plants, ice manufactories, and brick and tile works are the other chief industries. At Albuquerque, the largest city in the State, the greater part of the manufacturing interests are centered. Other cities of industrial importance are Santa Fe, Roswell, and Raton.

Transportation. Railroads in New Mexico are not extensively developed, though the average mileage per inhabitant is large. The State is traversed by several lines of the Atchison, Topeka and Santa Fe Railway, and by the Southern Pacific, which give connection with important points in all directions. The Denver and Rio Grande and New Mexico Central connect Santa Fe with Denver and the South. The Colorado and Southern passes through the northeast corner of the State.

Defense. The 1,032 members of the National Guard comprise one battalion of engineers and one regiment of cavalry.

History. The Spaniards were the first white men to visit the region now constituting New Mexico. They came in search of fabled treasure cities. In 1539, Fray Marcos de Niza, after a short visit to the region, brought back stories of great Indian cities with wonderful terraced houses. His stories were soon exaggerated by the people, and it came to be believed that great treasures were stored in the cities. In 1539 Francisco de Coronado gathered together a band of adventurers, and set out to conquer the country. But he met with disappointment on every hand. He found cities with terraced houses, but no treasure. In his search, Coronado explored a large part of the country. In 1581-1583 Fray Augustin Rodriguez and Antonio Espejo made further explorations in the Rio Grande region. In 1598 Don Juan de Onate led 400 colonists into the country, and settled at the junction of the Rio Chama and the Rio Grande. Several years later Santa Fe was founded. In the following years, Franciscan monks established a rigid rule over the Indians, until 1680, when the Indians revolted and drove out the Spaniards. Spanish domination was not reëstablished until the years 1692-1696, but was then maintained until the Mexican Revolution in 1821. For a time the New Mexican region formed part of the Estado Interno del Norte in the Republic of Mexico, but later was made a separate territory. When Texas won independence in 1836, that State included a part of New Mexico. The remainder of the State became United States territory with the treaty of 1848, after the war with Mexico. Later purchases and the creation of the Territories of Colorado and Arizona, brought the Territory of New Mexico (organized 1850) to its present size. During the Civil War, New Mexico was loyal to the Union.

In 1911 New Mexico adopted a state constitution, and became a State of the Union, January 6, 1912.

Places of Interest. New Mexico is filled with interesting Indian remains, ruins of Pueblo cities, Aztec villages, Spanish mission houses, and cliff dwellings. The most noted are at Aconia, Aztec, the Chaco River, Domingo, Jemes, Isleta, Taos, and Zuni.

ARIZONA

Area. Arizona has a gross area of 113,956 square miles, of which 146 square miles are water surface. The State ranks fifth in size among the states of the Union. Indian reservations, 1919, totaled 29,017.63 square miles.

Population.

Year	Population	Year	Population
1890	88,243	1910	204,354
1900	122,931	1920	334,162

There is a large proportion of foreign-born in the State, chiefly concentrated in the southern counties. The majority of the foreign element are Mexicans. Another large element is the Indian. The urban population is growing at a far more rapid rate than the rural population. In 1920, Indians numbered 32,989.

Topography. The southern and southwestern parts, lying within the extremely arid southwestern portion of the United States, consist of broad arid plains, interspersed with nearly parallel mountain ranges with altitudes in excess of 4,000 feet. The general trend of these ranges is northwest and southeast. The general elevation of the desert plains is about 2,000 feet. The elevation of the plateau in the mountain region to the north ranges from 4,000 to 8,000 feet, falling to 142 feet along the lower course of the Colorado River. The average elevation of the State is 4,100 feet. The plateau country in the north and northeast is quite varied in its surface configuration, abounding in high mesas, deep valleys, escarpments, and canyons. It culminates in the San Francisco peaks, north of Flagstaff, reaching 12,611 feet altitude.

Climate. The climate of Arizona is marked by the extremely low humidity and the clearness of the atmosphere. The temperature ranges somewhat higher than at points on the coast in the same latitude. The mean annual temperature for the north half of the State is 55° Fahr.; for the southern half, it is 68°. The Gila Valley in the southwest is the warmest region in the State, the mean for July reaching 98°. On the plateau the range of temperature is great, and the heat less oppressive. The climate in July, August, and September in southern Arizona, is very much like that of upper Egypt.

In the western half of the State the precipitation ranges from 1 to 10 inches; in the eastern half, from 10 to 25 inches.

Soils. The arid regions are covered with gravelly and sandy detritus brought down from the mountains, together with sandy loam, earth loam, and adobe soils. The valleys or plains are extremely fertile, and give marvelous returns in grain, fruits, and other products. The soils of the plateau are formed by the weathering of the underlying rocks, and are known as mesa soil. Irrigation is necessary for good crops, except in a few parts of the State.

Mineral Resources. Arizona is very rich in mineral deposits. The mining of copper is the leading industry, the State ranking first, producing over 672 million pounds in 1924, or about 30 per cent of the country's output. In the last half of the nineteenth century, valuable finds of gold and silver were made, and today some of the largest gold-mining camps in the United States are located in Arizona. Silver is now mainly a by-product of copper refining. The quarrying of sandstone and marble is of considerable importance. Other minerals produced are lead, zinc, lime, clay, fluorspar, gypsum, and garnet, tourmaline, and other gems. Coal of a low grade occurs in several parts.

Agriculture. Being situated in the arid belt of the United States, the successful pursuit of agriculture depends very largely upon irrigation, but dry farming is profitable in various parts. The waters of the streams in this State are shown by analysis to contain an unusually large percentage of fertilizing elements. Irrigation enterprises, 1920, embraced 813,153 acres, and over 467,000 acres were irrigated (an increase of over 46 per cent in a decade). The Roosevelt Dam supplies water to the rich Salt River valley, of which Phoenix is chief city; and the Yuma project, on the lower Colorado, is redeeming large areas in the southwest.

The land surface of Arizona is approximately 72,838,400 acres, 5,802,126 of which are in farms. The principal products are cotton, hay and forage, wheat, kafir and milo, barley, corn, oats, and potatoes. Cotton acreage increased from 19 in 1909, to 106,283 in 1919, and to 127,000 in 1923.

In Arizona a new grade of cotton, known as the "Pima," has been developed on a basis of Egyptian long-staple. Of this, in 1920, about 42,600,000 pounds, valued at $20,000,000, was harvested on 200,000 acres; and, the same year, there were about 25,000 acres under short-staple cotton, producing about 10 million pounds, valued at $2,000,000. Citrus fruits, dates, and olives are also commercial crops in the plains area.

Stock-raising is of great importance in Arizona. The limiting of grazing lands on the public domain, however, has put a check to the increase in this industry. Sheep are the most numerous of the live stock, though there are also large numbers of meat cattle, goats, horses, pigs, and mules. Wool clip, 1923, was over 5,798,000 pounds.

Ostrich farms are a feature of the stock-raising, especially in Salt River valley.

Forests and Forest Products. Northern Arizona, with large open forests of Western yellow pine, supplies a considerable share of the lumber used in the Southwest, and ships some to the North and East. The total cut 1924, was 89,000,000 feet, over 90 per cent of which was Western yellow pine.

Manufactures. The smelting and refining of copper is by far the greatest single industry, the value of its output being 78 per cent of the total value of manufactured products of the State. This industry employs over one-third of all the wage-earners. The other industries are principally construction work and repairs by steam railroads, flour and grist mills, and lumber and timber mills, with various others supplying chiefly home demands. The total volume of manufactures almost doubled in the years 1914–23.

Transportation. There are 2,473 miles of steam and 44 miles of electric railroads in the State. Two transcontinental railway systems cross the State, the Southern Pacific and the Santa Fé. These lines are connected by the Arizona Eastern, and a branch line of the Southern Pacific runs south into Mexico. At Yuma, connection is made with the San Diego and Arizona Railway.

Defense. The National Guard of Arizona on November 30, 1925, included 55 officers and 784 men, who make up one regiment of infantry.

History. Coronado led an expedition from Mexico through New Mexico and Arizona in 1540. Attempts at settlement were few, and the advance of civilization was much retarded by the hostilities of the Apache Indians. Arizona became the property of the United States in 1848, and in 1863 was organized as a Territory. Since then the development of mineral resources, and the introduction of irrigation projects, have been the main factors in the history of the State.

Attempts to secure admission to the Union were made in 1891, but application was refused by Congress. It was later decided to admit Arizona and New Mexico as one State, but this was found impracticable. Arizona was finally admitted as a State, February 14, 1912. The government is in direct control of the people through the Initiative, Referendum, and Recall.

Places of Interest. One of the scenic wonders of the world is the Grand Canyon of Arizona. It is a gorge 217 miles in length, carved by the Colorado River. It is from 6,000 to 7,000 feet deep, from 10 to 20 miles wide, and contains hundreds of peaks loftier than any mountains east of the Rockies. The rock walls, in places, rise sheer from the bed of the valley, displaying most wonderful effects in color and in erosional carving.

South of the town of Adamana is a wonderful petrified forest, in Apache County, the great trees lying scattered over a wide area, and constituting the finest and largest known specimens of silicified wood. And not far away, to the north, is the Painted Desert, which is said to rival, though on a much smaller scale, the color effects of the Grand Canyon.

Among other interesting sights are the great Roosevelt Dam on the Salt River, at Roosevelt; the old Spanish mission of Santa Gertrude de Tubac, at Tubac; the ancient ruins on the Little Colorado River, on the Rio de Chilly, and at Casa Grande. Hot Springs is a beautiful health resort, built around the natural fountains of hot mineral waters found at that point.

NEVADA

Area. Nevada ranks sixth in size in the Union, with an area of 109,821 square miles of land surface, and 869 square miles of water surface.

Population.

Year	Population	Year	Population
1880	62,266	1910	81,875
1890	47,355	1920	77,047
1900	42,335		

The density of population is lower than in any other state, its average in 1920 being 0.7 person per square mile. The urban population declined in 1900-10, but rose from 16.3 to 19.7 per cent in 1910-20.

Topography. The State of Nevada is a great elevated tableland or plateau lying almost wholly within the Great Basin. It is shut off on the west by the lofty Sierra Nevada Mountains, and on the east by the Wasatch Mountains and numerous detached ranges. The surface is broken within the borders by ranges of mountains running in a general north and south direction, and by numerous isolated buttes and mesas. The combined area of the valleys is about the same as that of the territory occupied by mountains. The whole region rises toward the east, reaching the highest point at Wheeler Peak (13,058 feet), near the center of the eastern boundary. There is a rapid descent in altitude in the south, near the Colorado River, to about 800 feet. The mountains of the entire region are rugged, steep, and lofty, the most imposing mass being the East Humboldt Range. The Colorado River district is a desert region diversified with occasional buttes and spurs.

Climate. The climate of Nevada is characterized by excessive dryness caused by the enclosing mountains, the normal annual precipitation at Winnemucca, in north-central region, being 8.4 inches. Except in isolated spots, the rainfall is insufficient for the growing of crops without irrigation. In the southwest, the annual rainfall amounts to only three inches.

The mean annual temperature is 49° Fahr., varying from 54° in the southwest, to 46° in the north. Temperature ranges from 104° F. to −28°, and the daily range in several districts is so great during the summer months that frosts are almost of nightly occurrence.

Soils. The prevailing soils are sand and gravel loams. Other extensive soils are the clay soils deposited in lake basins, and the alkaline sands of the southern deserts. No region is devoid of vegetation, except the so-called alkaline flats, which are very hard clay deposits encrusted with a saline material left by the evaporation of ephemeral lakes. The most productive soils are in the valleys of the north.

Mineral Resources. The Comstock lode, discovered in 1859, and the rich gold and silver mines at Tonopah and Goldfield, have placed Nevada among the great mining states of the country. The Comstock lode is perhaps the most remarkable deposit of gold and silver ever discovered. Its maximum output was reached in 1879, amounting to $36,301,537. After that the output gradually decreased, but improved machinery in later years brought a renewed increase. The Tonopah mine, richer in silver than in gold, was discovered in 1900. In 1902, 24 miles south of Tonopah, the Goldfield district was opened; in 1904, a rich discovery was made in the Bullfrog district in Nye County, 60 miles southeast of Goldfield; and in 1905, the riches of the Manhattan district, 29 miles northeast of Tonopah, were discovered. This great wealth caused a rapid influx of people, and towns sprang up with incredible swiftness. In 1924, Nevada ranked sixth in gold and third in silver output.

Other important mineral products besides gold and silver are copper, lead, and zinc. In 1912, the production of copper was found to exceed that of silver in value; in 1924, State ranked sixth in copper output. Other minerals worked are pyrites, quicksilver, antimony, iron, tungsten ore, salt, sulphur, graphite, borax, gypsum, and building stone. Anthracite coal occurs near Humboldt.

Agriculture. The extreme aridity of the climate places Nevada in a relatively low rank as an agricultural State. Farming is dependent on irrigation, which is practicable only in the Humboldt River valley, in the plains watered by the Carson, Truckee, and Walker rivers, and along the foot of the western mountains. Only 3.3 per cent of the State's entire land area is in farms. In this percentage are included ranges and pasture lands devoted to grazing. In the southeastern counties, the proportion of farm lands is not much over one-half of one per cent of the total area. Of all the farms in the State, 85.9 per cent were irrigated in 1920.

One of the striking characteristics of Nevada is the great area of arid land used for grazing. Cattle ranges in many cases are 50,000 to 100,000 acres in extent. Stock-raising, in fact, after mining, is the leading industry of the State. Animals on Nevada farms, 1923, were worth over $26,000,000. Beef cattle were the most numerous. Dairy interests are growing. Wool clip, 1924, was 8,000,000 pounds.

Hay and forage lead the farm crops in value. Other crops are potatoes (Irish and sweet), wheat, barley, farm garden truck, fruits and nuts (apples, peaches, pears, and small fruits), oats, corn, rye, and buckwheat. Wheat is the leading cereal. An interesting fact concerning the irrigated farm lands is that the average yield per acre is greater than in many of the leading cereal-producing states.

Forests and Forest Products. Forest lands are limited, and have largely been denuded to provide mine timbers. The growth is principally in the Sierra Nevada range, and is chiefly of conifers.

Manufactures. The manufacturing industries are not of great importance, the number of persons engaged being less than 5,000. The important manufactures are based chiefly on products of the mines and quarries. The leading industry is smelting and refining copper. Others of importance are railway shop construction, meat-packing, lumber, flour, and grist milling, and wall plaster and composition flooring. Reno, Tonopah, Sparks, Las Vegas, Elko, Ely, Fallon, and Goldfield are the chief industrial centers. Total output increased about 40 per cent, 1914–23.

Transportation. There are no navigable waterways in the State and railroads, slow of development, have been constructed chiefly to serve the mining districts. The Southern Pacific and the Western Pacific cross the State in the north; and the Los Angeles and Salt Lake (Union Pacific), in the south. These are connected by numerous branches with the rich mining districts.

The great Lincoln Highway traverses Nevada from Ibapah, Utah, through or near Fort Shelbourne, Ely, Eureka, Austin, Sand Springs, Fallon, Wadsworth, and Reno, to Truckee, California.

Defense. In 1925 there was no organized National Guard in the State. At the outbreak of the Civil War, in spite of scanty population, Nevada raised a company of troops, which was joined to a California regiment. In 1863, about a thousand additional men were raised; but they did not see actual service in the war. They were useful, however, in suppressing Indian uprisings within the State.

History. The first record of penetration within the boundaries of Nevada by white men is that of the Franciscan friar, Francisco Garcés, who crossed the extreme southern portion on his way to California in 1775. In 1825, Ogden of the Hudson's Bay Company entered Nevada, and visited the Humboldt River. Fremont passed through the region in the early forties, and emigrants on their way to California frequently visited the territory, some settling there. In 1848, Nevada became a part of the United States by treaty with Mexico at the conclusion of the Mexican War, and was first organized as a Territory together with Utah in 1850. The first permanent settlement in Nevada was established by Mormons in the valley of the Carson River, at Mormon Station, now called Genoa. After much boundary dispute with Utah, Nevada became an individual Territory separate from Utah, in 1861. Three years later, Nevada was admitted to the Union. Since its organization as a State, its development has been largely a history of its mines, with successive periods of great prosperity and decline as the rich mines were discovered and when their production began to decrease.

Places of Interest. Nevada is noted for beautiful scenery and numerous hot springs. At Golconda is a great sanitarium built near famous hot springs. At Gerlach are the popular Borax Hot Springs and hot mud springs. On Lake Tahoe, a mountain lake on the California border, is the popular Glenbrook resort. Near Elko and at Trego are also noted hot springs. Pyramid Lake is famous for its picturesque mountain scenery.

UTAH

Area. The gross area of Utah is 84,990 square miles, of which 2,806 square miles are water surface. The State ranks tenth in size among the states of the Union.

Population.

Year	Population	Year	Population
1880	143,963	1910	373,351
1890	210,779	1920	449,396
1900	276,749		

Utah's most rapid growth in population was between 1850 and 1880, when it multiplied over twelve times. The greater number of inhabitants are concentrated in the irrigated and the mining regions, large districts in the east and south remaining practically uninhabited.

Topography. Utah is separated into two divisions of distinctly differing surface characteristics, by the Wasatch Mountains, a north and south escarpment formed by the uptilting of a great block of the earth's surface along a fault line. The escarpment faces the west, and is much scored by deep canyons. East of the escarpment is a great plateau deeply broken and cut by canyons and eroded valleys, around great uplifted blocks of sandstone, shale, and limestone. To the south the plateau descends to the Grand Canyon Platform, by a series of gigantic steps formed of layers of pink, white, and vermilion stone and affording magnificent scenery.

West of the escarpment lies the Great Basin region including about half the State. The descent from the plateau is from 4,000 to 6,000 feet, leading by series of scarps to the Great Basin, a great, level, desert plain out of which rise isolated mountain masses. Numerous mud-flats and the beds of dried-up lakes are scattered over the sandy surface. Great Salt Lake, in the north-central part, is a small remnant of a much larger lake.

Climate. High altitudes and deep valleys and basins bring about the diversity of climate usual in mountainous countries. Very severe winters are experienced on the lofty altitudes, while in the intervening valleys the climate is considerably milder. The mean annual temperature ranges from 58° Fahr. in the south to 42° in the north. The Great Salt Lake has a tempering effect on the climate of the surrounding region.

Rainfall varies in different parts of the State, the greater amount falling during the winter months. At Salt Lake City, in the north, the mean annual precipitation is 16.09 inches, and in the basin at Hite, in the southwest, it is 2.3 inches, of which 0.4 of an inch falls in the summer. At places on the plateau, the rainfall averages thirty inches.

Soils. The best farming lands lie along the western border of the Wasatch Mountains, where sandy and gravelly loams prevail; and in the stream valleys and lake floors, where finer-grained sediments are found. In the high plateau country, the alluvial soils in the deep valleys afford some scattered spots that may be cultivated. In the southeast is found a poor, sandy soil, and in the Great Basin are large areas of irreclaimable desert.

Mineral Resources. The minerals of Utah are of great diversity and value. The State leads in the production of silver, producing $12,218,000 worth in 1924. Coal is second in value, with copper, in which the State is second to Arizona, third. There were 152,000 ounces of gold mined in 1924. Lead and zinc are mined, and the supply of iron ore, while little worked, is apparently inexhaustible. The State holds second rank in production of ores of the rare metals uranium and vanadium.

The coal fields of Utah cover an estimated area of about 13,000 square miles, and the mines employ about 4,000 men, who took out four million tons in 1922.

The quarries of Utah produce limestone, sandstone, and marbles. Of precious and semi-precious stones, the State produces garnet, amethyst, jasper, topaz, tourmaline, opal, malachite, and Smithsonite. Other mineral products are salt (from Great Salt Lake), clay products, gypsum, antimony, sand and gravel, cement, phosphate, manganese ore, molybdenum, and tungsten ore.

Agriculture. The agricultural acreage is concentrated chiefly in the north-central portion, immediately west of the Wasatch Mountains, where streams issue from the highlands, and here are located the principal centers of population. In the plateau portion are small valleys which are made very productive by intensive cultivation and irrigation. The plateau itself is mainly devoted to grazing.

Farm acreage increased nearly 50 per cent in 1910-20, and includes almost one-tenth of all land in State. Over 1,371,000 acres were irrigated, 1919, from streams and artesian wells. The leading crop is hay and forage (chiefly alfalfa), with value about double that of all cereals, and over two-fifths that of all crops. Among the cereals, wheat leads, followed by oats, barley, corn, and rye. Sugar-beet crop is of great importance; and fruits are grown in great variety.

Large areas of semi-arid land are devoted to grazing, many ranches exceeding 100,000 acres in extent. Sheep are the principal live stock.

Forests. The forest resources of Utah are of little value. Practically the only merchantable timber is the yellow pine found in the northeast mountains.

Manufactures. Manufacturing is still in a comparatively undeveloped state in Utah, but in late years is showing marked increase.

Three industries predominate, based on the mineral and agricultural resources of the State. They are the smelting and refining of copper, the smelting and refining of lead, and the manufacture of beet sugar. Other industries are the flour and grist mills, railway shops, dairies, and slaughtering and meat-packing plants. Printing and publishing holds high rank among the industries. Beet-sugar refining is of great and growing importance. Much of the industrial development of Utah is due to the utilization of the numerous mountain streams for electric power.

Transportation. Railroad transportation is excellent. The principal lines are the Denver and Rio Grande, the Southern Pacific, the Union Pacific, and the Western Pacific railways.

There are no navigable streams, but good facilities for transportation are afforded by the excellent roads, the construction of which has been encouraged for years and subsidized by the state and county governments. The monumental Lincoln Highway crosses the State in the Great Salt Lake region, from Evanston in Wyoming, through or near Echo, Ogden, Salt Lake City, and Timpie, then along the southern edge of the Great Salt Lake Desert to Ibapah, at the western border of the State.

Defense. The National Guard of Utah included in 1925 74 officers and 877 enlisted men, who made up one regiment and one battalion of field artillery and one ambulance company.

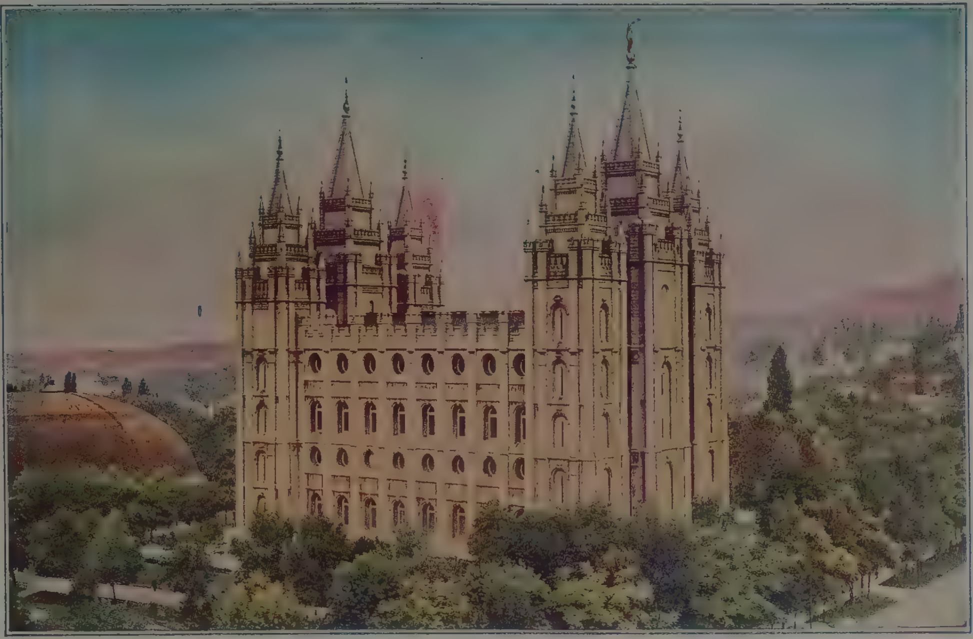
History. The name "Utah" is derived from the Indians who once occupied the northeastern portion of the State, and called themselves Utes or highlanders. After the reputed visit to the region by a band of Coronado's men in 1540, the first authentic explorations were made by two Franciscan friars on their way from Santa Fé in New Mexico to California, in 1776. In 1824, James Bridger, a trapper, discovered the Great Salt Lake. Other trappers followed his route into the region, and established several trading posts. The first permanent settlement, however, was not established until 1847, when Brigham Young led his band of Mormons from Illinois to the Great Salt Lake, and founded Salt Lake City. By 1848 there were over 5,000 Mormons in the State. The territory within the present boundaries of Utah was part of the Spanish and Mexican possessions until the war with Mexico, in 1848, when it was ceded to the United States with other territory. In 1850 the Territory of Utah was created, including, besides present Utah, parts of Colorado, Wyoming, and Nevada. In 1861 the formation of Colorado and Nevada Territories, in 1863 the formation of Idaho, a change of one degree in the Nevada boundary in 1864, and the creation of the Territory of Wyoming in 1868, left Utah with its present boundaries. After much controversy over the Mormon question, Utah was admitted to the Union, January 4, 1896.

Places of Interest. Utah is filled with picturesque mountain, desert, and canyon scenery. Among the popular resorts are Greenriver, amid wonderful canyon scenery; the noted hot springs near Heber, called Hot Pots; Saltair, a great bathing beach on Salt Lake, with a splendid pavilion; and Hot Springs, where the waters are said to equal those of Carlsbad.

FEATS OF ARCHITECTURE AND ENGINEERING

Utah is the recognized hub of the followers of Joseph Smith and Brigham Young. In Temple Block, the sacred square of the Mormons lying near the center of Salt Lake City, is the handsome, lofty granite building used for the administration of ordinances, including marriage and baptism for the dead. Three pointed towers adorn each end of the structure; the highest, 210 feet above street level, is surmounted by a figure of the Mormon angel, Moroni.

Close to the Temple is the huge elliptical structure of the Tabernacle, whose iron-shingled roof shaped like the shell of a turtle is supported by forty-four pillars. This structure, viewed from the interior, exhibits one of the largest unsupported arches in the world, and the acoustic properties of its great hall, capable of accommodating 12,000 people, are so marvelous as to constitute almost a modern miracle. Widespread is the fame of its 5,000 pipe organ.



THE TEMPLE, SALT LAKE CITY, UTAH Courtesy of Chicago & North Western Ry.

Other prominent buildings connected with the history of the Mormon Church and located in this headquarters of the Church of Jesus Christ of Latter-Day Saints, are the Assembly Hall, a granite place of worship accommodating 2,500 people, three residences of Brigham Young, named respectively the Lion House, the Beehive, and the Amelia Palace or Gardo House, the latter now housing an admirable private art collection, the property of the present owner of the Palace. The Church of Latter-Day Saints is also a conspicuous monument to the energy of this peculiar religious sect whose practice of plural marriage and vigorous proselyting to that end, brought Utah's capital city into disrepute in days past.

Twelve miles northwest of Salt Lake City is the strange body of water, eighty miles long and thirty miles in width, called Great Salt Lake, which is the emptying ground of several streams and even sizable rivers, but has no outlet. Evaporation rids the lake of its superfluous water, which contains a most unusual proportion of pure salt and is remarkably buoyant, having great specific gravity.

To the south of Utah lies the newest state of the Union, Arizona, a state famed far and wide as the possessor of the most marvelous wonderland on the globe. The colossal, superbly and gorgeously tinted rock sculpture of the Grand Cañon of the Colorado River is pronounced by world travelers to be the most stupendous natural phenomenon, the most majestic and sublime spectacle to be viewed by the eyes of man. Extending for a length of 250 miles, with a depth of 3,000 to 6,500 feet, the myriad towers and pinnacles of its walls are awe-inspiring in the grandeur of their chiseling by other than an earthly Sculptor. Its great river plunges between the gigantic rock walls, from the heights above appearing but a winding thread. Descent to its level is possible to those who are not appalled by dizzy heights and hazardous outlooks, but the timid will find greater pleasure in exploring the caves of the cliff-dwellers on the outer edge of this miracle of color and form.

The United States engineers in the Reclamation Service have made Arizona's name resound with another peal of praise and glory by the construction, eighty miles east of Phœnix in the Salt River Valley, of one of the most massive dams ever completed in this country. This arch of masonry, whose radius is 400 feet, is made of huge blocks of granite yielded by the near-by hills, and is named in honor of Theodore Roosevelt. Behind the dam the river is 225 feet deep and there is now enough water in the reservoir to irrigate the 219,000 acres of farm land in the Salt River Valley for three years without another drop of rainfall. To the progressiveness of Arizona was due the National Irrigation Congress which brought about legislative action resulting in the creation of the United States Reclamation Service. Its aim is to reclaim the desert land of the West, and so to conserve superabundant waters that a flood will prove a blessing instead of a disaster. The great reservoir formed by the Roosevelt Dam, which stores away an ample supply of water, has trebled and quadrupled the value of Arizona's unimproved land.

ROOSEVELT DAM, SALT RIVER VALLEY, ARIZONA

COLORADO

Area. Colorado has a gross area of 103,948 square miles, including 290 square miles of water surface, and ranks seventh in size among the states of the Union. Land area, 66,341,120 acres.

Population.

Year	Population	Year	Population
1880	194,327	1910	799,024
1890	413,249	1920	939,629
1900	539,700		

The population is about evenly distributed between urban and rural territory, the rural inhabitants, 1920, being slightly in a majority and concentrated chiefly toward the northeast. Denver contains over 27 per cent of the population of the State.

Topography. The mean altitude of Colorado is higher than that of any other state in the Union. Along the eastern boundary, the Great Plains in their upward slope toward the Rockies have attained an altitude of 3,500 feet. The region continues to rise westward until, about halfway in the State, the Great Plains merge with the Rockies at an altitude of 7,000 feet. Approaching the mountains, the slope is cut deeply by river valleys. From the center of the State westward, magnificent mountain masses rise, interspersed with valleys, gorges, deep-cut canyons, and beautiful "parks," all abounding in most wonderful scenery. The mountain peaks range from 10,000 to 14,400 feet in altitude.

Climate. Great daily and annual range of temperature typifies the climate of Colorado. The nights are very cool, even in the hottest summer months. The mean annual temperature for the State is 44.6°. The air is dry and light, and is much sought for its restorative influence.

The average annual rainfall is about 17.54 inches, being highest and most generally distributed in the north and east.

Soils. In the eastern part of the State, the long upward slope of the Great Plains is composed chiefly of the detritus washed down from the mountains by the streams. These lands are particularly adapted for grazing. The agricultural lands are found mainly in the river valleys and in the mountain "parks," which are large plateaus surrounded by lofty ranges, and where the soils are mostly sandy loams, derived from alluvial or lake deposits.

The deep, narrow river valleys are bordered at low levels by silty and sandy alluvial soils. On the bench lands at higher altitudes are sandy and gravelly loams.

Mineral Resources. Colorado is preëminently a mining State, containing practically unlimited mineral resources. Gold, first discovered in 1858, is the leading mineral, the State ranking second in output, 1924. Silver output ranked seventh.

There are enormous deposits of fine building stones, which have hitherto been little exploited, vast fields of bituminous coal, and rich deposits of lead, zinc, and copper. Iron ores occur abundantly, but are little worked.

The principal coal-mining centers are located in Las Animas and Huerfano counties, but there are many other fields. Reserves are estimated at about 317½ billion tons, including some anthracite.

There are numerous mineral springs, which are beautifully situated and of high repute. Clay products, manganiferous ores, tungsten ores, sand, and gravel products are of considerable importance. There are a few oil wells.

Agriculture. The principal agricultural areas are the South Platte and Arkansas River Valleys. Sugar beets are being raised with particular success in these valleys, and enormous crops are produced annually. These regions have been extensively irrigated.

In the mountainous portion, the chief agricultural district is the San Luis Valley. The "Parks" also have agricultural possibilities, and, with the aid of irrigation, would undoubtedly provide rich crops, but they are as yet little occupied for farming purposes.

Alfalfa is the leading forage crop in Colorado. The hay crops combined, 1923, contributed about one-fifth the total value of crops in the State, cereals contributed slightly over one-third, sugar beets, nearly one-tenth, potatoes and vegetables, about one-eighth, the remainder being made up chiefly by fruits and nuts. All crops show a great increase in acreage since 1900.

The leading cereal crop is wheat, followed by corn and oats. Sugar beets provide the fourth most important crop, following hay, wheat, and potatoes. Orchard fruits are of increasing importance, apples contributing about five-eighths of the crop.

Large areas are devoted to grazing, principally sheep and cattle. Stock-raising is an older industry in Colorado than soil cultivation.

Forests and Forest Products. The forest area of Colorado is extensive and rich, though largely undeveloped. No other woodland area on the continent has been so much ravaged by fire. The woodland is confined almost wholly to the mountain slopes, where the yellow pine and the ridge-pole pine predominate. Other species are spruce, hemlock, cedar, poplar, and cottonwood.

Manufactures. Much of the manufacturing development of Colorado is dependent on the extensive mining industry, as well to supply the needs of that industry as in utilizing the products. The agricultural resources are also the basis of manufacturing industries of increasing importance. Foundries and machine shops, blast furnaces, steel mills, and copper, lead, and zinc smelters and refineries use the mining products, sugar refineries, canning factories, and flour mills use much of the farm produce. Slaughtering and meat-packing, a leading industry, owes its development to the great advantages of Colorado for grazing.

Transportation. Railroad transportation is well developed, designed chiefly to serve the rich mining and agricultural districts of the State. The city of Denver is the terminal and radial point for most of the main lines of the Rocky Mountain region.

A branch road connects Denver with the great Lincoln Highway at Big Springs, Nebraska, and Cheyenne, Wyoming.

Defense. The Colorado National Guard of 140 officers and 1,549 enlisted men, is organized as one regiment of infantry, two batteries of field artillery, one squadron of cavalry, and the 45th Division Air Service consisting of an observation squadron, a flight squadron, a photo section, and a medical detachment.

History. The first authenticated exploration in the Colorado region was made in 1776 by the Spaniard Padre Francisco Escalante. The Spanish, however, made no attempt at settlement. The region came into possession of the United States, partly by the Louisiana Purchase in 1803, partly by purchase from Texas after that State had won independence, and partly through cession by Mexico in 1848 after the Mexican War.

After 1803, fortified posts were established in the Colorado region, and a number of American explorers discovered the many wonders of the mountainous portion. In 1841, overland emigrants passed over the district, and in 1842-1843, John Fremont made important surveys. In 1846, the Mormons settled temporarily at what is now known as Pueblo. It was not until 1858, however, that a permanent settlement was made in the State, located at Denver.

Portions of the Colorado region formed parts successively of the Louisiana Territory, the Missouri Territory, the Indian Country, Utah, New Mexico, Kansas, and Nebraska. Finally, in 1861, the Colorado Territory was organized with its present boundaries. In 1876, Colorado became a State of the Union. Gold was discovered in 1858, and since then the history of the development of the State has largely been that of its mines.

Places of Interest. Colorado is full of places famed for scenic beauty or historic interest. The Rocky Mountains cross the State, filled with canyons and gorges cut through vari-colored rock, and presenting scenes that are awe-inspiring in their grandeur. Beautiful lakes abound, and great glaciers lie in some of the valleys and on the peaks. This beauty of scenery, combined with wonderful climate, have made Colorado a widely known pleasure resort, "the playground of the nation." In many places in southwestern Colorado are to be seen the remains of an early people called the Cliff Dwellers. The most remarkable ruins of the ancient dwellings are found near Mancos, in southwestern corner of the State.

The Royal Gorge, with Canyon City at the lower end, is world-famous. Cripple Creek is famous as a rich and historic gold-mining district. Denver is the mecca annually of thousands for the delightful climate, the progressiveness, and the magnificent mountain scenery. Wonderful vistas and parks abound in all parts of the State, such as Mesa Verde National Park and Rocky Mountain National Park, the Garden of the Gods, and Pike's Peak.

WYOMING

Area. The total land area of Wyoming is 97,548 square miles; and the total water surface, 366 square miles. Wyoming ranks eighth in size among the states of the Union.

Population.

Year	Population	Year	Population
1800	20,789	1910	145,965
1890	62,555	1918	190,380
1900	92,531	1920	194,402

The highest density of population is toward the southeastern and north-central portions. The cities are comparatively small, the largest being Casper (pop. 23,288). Indians, 1,343.

Topography. The greater portion of the State lies in the High Plains region, rising from an altitude of about 4,000 feet at the eastern State line to 7,000 feet along the slope of the Rockies in the west. The plains are flat or gently rolling, broken by erosion buttes and mesas. In the northeast corner is an extension of the Black Hills region of South Dakota. In the southeast, the north end of the southern Rockies penetrates into the State. The western part of the State is mountainous, especially in the north, where huge masses of the northern Rockies rise in irregular and frequent groups and form the magnificent scenery of Yellowstone National Park and the Big Horn Mountains.

Southwestward the State is broken by minor mountain groups, volcanic buttes, and lava flows. The elevation here, however, is comparatively so low that the region affords a broad pass through the Rockies, of which the railroads have availed themselves.

The plateau is in general free from tree growth; but is well covered with grasses, providing valuable grazing regions.

Climate. Because of the generally high altitude of the State, the daily and annual ranges between extremes in temperature are great, varying according to locality. Elevations under 6,000 feet have a mean annual temperature of from 40° to 47°; and the high mountain areas and valleys, as low as 34°.

Except for a small area in the northeast, rainfall in Wyoming is usually not sufficient for crops without irrigation. This is practiced wherever water is available. The normal annual precipitation ranges from 10 to 15 inches.

Soils. Some large areas in the southwestern portion are so alkaline as to be almost unreclaimable. Many sections, however, in all parts of the State, on the high plateaus and in the mountain valleys, have been made fertile and productive by irrigation. The agricultural soils are alluvial deposits from mountain streams and flood plain sediments.

Mineral Resources. The mineral resources of Wyoming are extensive. The principal products are petroleum, coal, natural gas, clay, copper, gold, iron ore, and silver. The quarries yield sandstone and limestone, phosphate rock, and gypsum. In comparison with petroleum, other minerals in 1922, except coal, were inconsiderable.

Agriculture. The main feature of Wyoming agriculture is the large proportion of semi-arid land devoted to grazing. Other large districts are enclosed in Indian reservations and national forest reserves. The grazing areas are divided into ranches of very large acreage, and vast flocks of sheep, cattle, horses, and hogs are raised. Wyoming is one of the leading states in sheep raising and the production of wool. There were about 2,700,000 sheep in the State in 1923. Large numbers of cattle and horses are also raised.

Extensive irrigation projects are under way in Wyoming. The Shoshone project is the principal Federal undertaking, though many private companies have done extensive work. Scientific "dry farming" has also aided in the advancement of agriculture. Valleys of the large streams, especially the North Platte, afford best natural farming conditions.

Over 60 per cent of the value of crops in Wyoming, 1923, was contributed by hay and forage. More than half of the hay crop was alfalfa. Wheat and oats were the leading cereals, followed by corn, rye, and barley. Potatoes are grown extensively, and flaxseed is an important crop.

The fruit crop of Wyoming is one of increasing importance. In the sheltered valleys, the finest of apples, plums, pears, cherries, and other orchard fruits are raised. Apples contribute about 90 per cent of the orchard fruits.

Forest and Forest Products. Though the plateau is generally without tree growth, extensive forest areas are present in the mountain regions, especially in the Black Hills, the Big Horn Mountains, and the Yellowstone region. The Medicine Bow Mountains in the southeast are also heavily forested. The total forest area is about 8,333,000 acres. Lodgepole pine (for ties), Western yellow and white pines, with some white spruce and hemlock, are the chief commercial timbers.

Manufactures. The manufactures of Wyoming do not go beyond supplying products for home consumption, and rank among the least developed in the Union. The important industries are railroad car construction and repair, lumber and timber, flour-mill and gristmill products, printing and publishing, butter, cheese and condensed milk, bakery products, and slaughtering and meat-packing. The principal industrial city is Cheyenne, the capital. The manufactured products of the State, valued at $110,637,000 in 1923, had multiplied over tenfold in as many years.

Transportation. Railroads are comparatively little advanced in Wyoming. The Union Pacific, the Chicago, Burlington and Quincy, and the Chicago and North Western are the principal systems operating lines within the State. Stage route transportation is still a common means of travel in Wyoming. There are no navigable rivers.

The famous Lincoln Highway, constructed as a lasting memorial to Abraham Lincoln, crosses the southern part of the State in its course from sea to sea. Entering the State from Bushnell, Nebraska, the Highway passes through or near Cheyenne, Laramie, Arlington P. O., Fort Fred Steele, Rawlins, Rock Springs, Granger, Lyman, and Evanston, to Wasatch, Utah.

Defense. On November 30, 1925, there were 42 officers and 649 enlisted men in the National Guard of Wyoming, making up one regiment of cavalry and one machine gun troop.

History. The first Europeans to enter the Wyoming region were the fur traders, Verendrye and his two sons, who came from Canada in 1743. The region remained undisturbed thereafter until 1807, after the purchase of Louisiana from France. In that year a member of the Lewis and Clark expedition discovered the Yellowstone region. Trappers and traders followed, and many overland parties traversed the State on their way to the Pacific. In 1834, Fort Williams, afterward named Fort Laramie, was established as a trading post. Parts of the area now included in Wyoming belonged successively to various states and territories until 1868, when the Territory of Wyoming was formed.

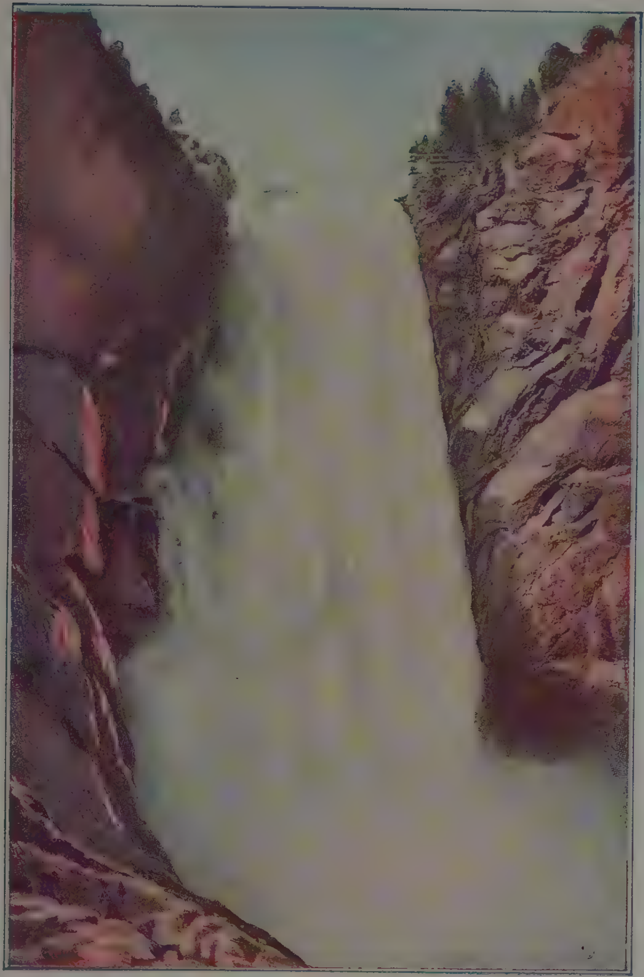
The region was much disturbed by Indian troubles culminating June 25, 1876, in the massacre of General Custer and all his troopers, in Montana. In 1867, gold was discovered in the Black Hills region, and a rush of gold seekers followed. The Indians were aroused by the encroachments on their favorite hunting grounds, and several crushing defeats were necessary to subdue them. Wyoming was admitted to the Union, July 10, 1890.

Yellowstone Park. This national reservation comprises an area of about 3,348 square miles, in the northwestern corner of the State, extending a short distance into Montana and Idaho. It is an undulating volcanic plateau, 8,000 feet in altitude, enclosed by lofty mountain masses, and containing scenery of a most varied and magnificent kind. In 1872 the Government reserved it "for the benefit and enjoyment of the people." There are more than three thousand places where hot water comes to the surface in hot springs and geysers of peculiar characteristics. Some of them spout to a height of more than two hundred feet. Others spout periodically, and are as regular as clockwork. Yellowstone Lake is an irregularly shaped sheet of water in a wonderful setting of lofty mountains, and dotted with forested islands. The Yellowstone River within the park flows through scenic canyons and gorges, and is interrupted by beautiful falls. Four-fifths of the park is densely forested with black pine, balsam, fir, spruce, cedar, and poplars. No hunting is allowed, and numerous wild animals, such as bears, beavers, deer, and buffalo roam the forests and valleys. Fishing is permitted.

THE FAR-FAMED YELLOWSTONE

In the National Reservation in Wyoming, Montana, and Idaho, set apart for the enjoyment of the people of the United States, volcanic action has resulted in curious and violent eruptions of water, and in rock formations whose splendor is enhanced by startlingly brilliant tints. Over 3,000 hot springs are distributed over this wonder park comprising 3,350 square miles, and the coloring of many of these pools among the odd-shaped rocks, especially around Mammoth Hot Springs, is indescribably beautiful.

Nature has simply lavished her gifts in every quarter of the Yellowstone, whose rival wonders are its cañon and falls. The eastern division of the National Park is drained by the Yellowstone River, which flows into and through the lake of the same name, and, after rushing along in a series of rapids a few miles distant from the lake, plunges over a cliff 109 feet high. Continuing its course with added momentum, half a mile beyond the Upper Fall it makes a sharp descent of 308 feet, forming the beautiful and powerful Lower or Great Falls. These have been realistically and charmingly described as "the drapery of the cañon—two silvery curtains that hang at its head—a great river pouring over a precipice and falling in glassy sheets hundreds of feet, then ruffling and flouncing and festooning until lost in the rainbow-hued mist at their feet."



Courtesy of Chicago & North Western Railway

GREAT FALLS OF YELLOWSTONE

The world's most beautiful and far-famed geyser is Old Faithful, universally known as the water-clock of the Yellowstone. Every seventy minutes, with no omissions, 250,000 gallons of steaming water are hurled to a height of 150 feet. The eruption lasts for the space of four minutes, and at night the sight is particularly strange.

The Fountain Geyser, which spouts a dozen or more times a day, sends up such varied and interlaced jets extending in all directions, that it may fittingly be termed a water-pyrotechnic display. It does not rise high, but what it lacks in height it gains in spreading power. Near it are located the curious Mammoth Paint Pots, which are mud springs of different colors, their tints varying according to the mineral ingredients in the steam. This vapor has also the power of converting the mud thrown up into a number of distinct figures, flowers and other formations being imitated with great exactness.

Courtesy of Chicago & North Western Railway

CLEOPATRA TERRACE, NEAR MAMMOTH HOT SPRINGS, YELLOWSTONE PARK

The greater portion of the National Park is covered with dense forests, and the Government protects all game in them and in the surrounding heavily wooded territory. The bears—black, brown, and grizzly—are exceedingly tame, and approach without fear the grounds of the hotels in search of food from the kitchen wastage. Mountain sheep, antelope, and deer also frequent the forests, and there are a few wild bison at large as well as five score or more confined in a valley pasture.

Yellowstone Park Rangers police the entire reservation, and there is little likelihood of many of the laws laid down by the Secretary of the Interior being broken with impunity.

Automobiles and motorcycles may enter and leave the park between 6 a.m. and 9.30 p.m., and there are large free camp grounds amid beautiful surroundings, especially provided for this type of tourist. Wyoming's other charms are all dwarfed by the marvels and glories of the Yellowstone, most of which lies within the confines of this state.

In the mid-western part of New Mexico passes the Continental Divide, separating the waters flowing into the Gulf of Mexico from those which reach the Gulf of California. This state has another unusual feature in the mounted police who operate chiefly in the cattle country, empowered to make arrests and preserve order in whatever portion of territory appears to demand their restrictive presence. New Mexico has been the scene of prolonged Indian warfare, but now the Navahos are industrious, peaceable, and prosperous on their reservation on the Pecos River. Those royal raiders, the Apaches, took much longer to subdue, and their disastrous outbreaks continued until 1886, when they were finally confined on reservations. New Mexico ranks exceedingly high as a health resort, diseases of the respiratory organs being practically unknown in this land of bright skies, clear air and even temperature. To Albuquerque, Phœnix, and Tucson come a constant succession of sufferers from other portions of the country, and marvelous are the transformations effected by the delightful climate.

MONTANA

Area. The land area of Montana is 146,131 square miles. Water surface comprises 866 square miles, making a gross area of 146,997 square miles for the State. Montana ranks third in size in the Union. Land reserved by the Government as Indian Reservations in 1919 totaled 5,536.99 square miles.

Population.

Year	Population	Year	Population
1870	20,595	1900	243,329
1880	39,159	1910	376,053
1890	142,924	1920	548,889

The highest density of population is toward the southwest. The county with the most inhabitants to the square mile is Silver Bow, containing Butte City; and that with the lowest density is Powder River. The Indian population, 1920, was 10,956.

Topography. Montana lies partly in the Great Plains region, and partly in the Rocky Mountain division. The Great Plains slope from the foothills of the Rockies in the west, at an altitude of 4,000 feet, down to 2,000 feet in the northeast. The Missouri and the Yellowstone Rivers flow in deeply eroded gorges and broad valleys, and the intervening plains are broken with numerous bluffs and buttes. The Rockies cross from southeast to northwest, and cover the western third of the State, with numerous lofty and rugged spurs and ranges. In the west and northwest is a considerable basin between the mountains, which is much dissected with short, irregular ranges. A number of other broad-bottomed valleys occur in the mountain region. There are at least six peaks in the State that reach an altitude of 12,000 feet, Granite Peak (12,834 feet) being the highest.

Climate. The mean annual temperature ranges from 37° in the northeast, to 47° in the mountains, with a great annual range in the Plains, but a much more equable temperature among the mountains. The climate is in general dry, except in the mountains. In the northwestern portion, the precipitation sometimes becomes very great. The average annual rainfall in the Plains is 10 to 15 inches; and in the mountains, 20 inches or more. The "chinook," a warm, dry wind from the west, has a considerably modifying influence on the temperature, its influence being felt in a diminishing degree even to the eastern border, and having a tendency to shorten winter periods of severe cold on the Plains.

Soils. Within the mountain regions are numerous valleys with alluvial bottoms, containing dark-colored silts and sandy, gravelly loams. The soils in the southeast are formed by rock disintegration and weathering of sandy and gravelly loam deposits from the mountains. In the north, along the Canadian border, the land has been feebly glaciated, giving rise to soils like those of northeastern North Dakota in the Red River Valley. The plateau lands are used for dry farming, the most broken portions being devoted to grazing. In the extreme east is a small area of "Bad Lands," a much eroded plateau area, which is non-agricultural but is used extensively for grazing. Much former grazing land is now being occupied by settlers, and scientific dry farming is producing excellent crops. In the broad-bottomed valleys of the mountainous region in the southwestern and central parts, irrigation is extensively practiced.

Mineral Resources. Montana is one of the leading copper-producing regions of the world. The most important copper mines are in Silver Bow, Broadwater, Jefferson, and Beaverhead counties. Butte is the greatest copper-mining camp in the world. Montana ranks next to Arizona and Utah as a copper State, normally producing about 250,000,000 pounds a year, or about one-sixth of the country's output.

Large quantities of silver and gold are mined, some famous strikes having been made in the early sixties. The output of gold had diminished considerably in late years, but the State, 1924, was second only to Utah in production of silver, with output of over 13,155,000 ounces.

A lignite coal is found in the eastern portion of the State, and a good bituminous coal in the western. Montana ranks first in gems, producing the bulk of the world's sapphires, and fourth in zinc. Other minerals are petroleum, lead, natural gas, manganese, graphite, gypsum, and tungsten.

Agriculture. The chief characteristic of Montana farming is the great ranch. Vast areas of semi-arid land are given up to grazing exclusively, the ranches frequently exceeding 100,000 acres in extent. The cattle once raised on the Montana ranches have given way to a considerable degree to sheep. Montana is among the leading states in the Union in the raising of sheep, and in 1923 ranked third in the production of wool. Large numbers of cattle, horses, and swine are also raised.

The chief agricultural crop of Montana is hay and forage, followed by the cereals, with wheat far in the lead. Vegetables, oats, flaxseed, potatoes, sugar beets, and barley are important crops. Fruits are extensively cultivated, especially in the Bitter Root, Missoula, and Flathead valleys. Apples are the chief product, followed by cherries and plums. The chief hay crop is alfalfa. Extensive irrigation projects have been completed, and others are under way, both government and private.

Montana has great undeveloped agricultural resources, and opportunity is offered to bona fide settlers of acquiring land and becoming permanent residents.

Forests and Forest Products. The lumber products of Montana are of considerable importance, the woodlands lying mainly on the mountain slopes. The saw-timber stand, 1921, was about 57 billion feet. Cut in 1919, 335,811,000 feet. Western Montana and Idaho contain 75 per cent of the country's standing Western white pine, and heavy stands of larch, cedar, and yellow pine. Other trees are Douglas fir, spruce, lodgepole pine, balsam, and hemlock.

Manufactures. The manufacturing industries are engaged chiefly in the smelting and refining of copper, the products of which make up more than two-thirds of the total value of manufactured products. Other establishments are lumber and timber mills, railway shops, flour mills, and slaughtering and meat-packing houses. Hydro-electric development has already harnessed a good part of the 1,000,000 horsepower available from the rivers, chiefly the Madison and the Missouri. In 1923, the State had 679 manufacturing establishments, employing 15,943 people, which put out products valued at $174,874,000.

Transportation. Three transcontinental railway lines traverse the State. They are the Great Northern, the Northern Pacific, and the Chicago, Milwaukee and St. Paul railroads. Branch lines of the Oregon Short Line and the Burlington System penetrate into the State. The rivers are of little importance for transportation.

Defense. In 1925, Montana's National Guard of 61 officers and 1,042 enlisted men were all included in one regiment of infantry.

History. French trappers were the first Europeans to enter the region now included in Montana. After the first visit in 1743, other trappers and traders entered the southeastern portion; and in 1809 and after, various trading posts were established along the Yellowstone. In 1829, Fort Union was built by the American Fur Company; and in 1846, Fort Benton was established.

In the early sixties, gold was discovered at Bannack, at Virginia City, and at Helena, and the inrush of gold seekers and prospectors began. The Indians became troublesome, and there was much lawlessness among the gold seekers. Troops were sent against the Indians; and a long campaign culminated in the extermination of General Custer's command by the Sioux near the Little Big Horn River, June 25, 1876. Shortly after, the Indians were defeated, and most of them captured or driven out of the Territory.

Montana was originally part of the Louisiana Purchase of 1803. It formed part of various Territories until 1863, when, with practically its present boundaries, the region became part of the Territory of Idaho. In 1864, Montana was erected into a separate Territory, and in 1889 was admitted to the Union as a State.

Places of Interest. At Anaconda are great copper smelters and a phosphate fertilizer plant. At Missoula is the State University. Montana has many famous pleasure resorts, with beautiful scenery and noted hunting and fishing regions. Glacier National Park, in northwest, is on the Canadian border; and Gardiner, at the south border, is the official entrance to Yellowstone National Park. At Yogo are the great sapphire mines. The stones are sent to London, and cut chiefly in Switzerland.

IDAHO

Area. The extreme length of the State along the western boundary line is 490 miles. The width varies from about 45 miles in the northern portion, which is called the Panhandle, to about 305 miles in the south. The total area is 83,354 square miles of land surface, and 534 square miles of water surface. Idaho ranks twelfth in size among the states.

Population.

Year	Population	Year	Population
1870	14,999	1900	161,772
1880	32,610	1910	325,594
1890	88,548	1920	431,866

The population grew very rapidly between 1880 and 1910, and is now (1925) over 32 times what it was in 1870. According to the census of 1920, the urban territory contained 27.6 per cent of the total population. Indians number 3,098; Japanese, 1,569.

Topography. The State is widely diversified topographically. It has many hills and mountains, interspersed with valleys, rugged canyons and deep ravines, wide upland meadows and wooded parks, broad plateaus, rolling prairies, sage brush plains, and beautiful lakes. The western portion, except the extreme north, is occupied by great plateau plains, which extend east along the Snake River. On all sides, the plateau is bounded by mountain masses; and through its surface the Snake River and its tributaries have cut deep gorges. The spurs from the Rocky Mountains and the Bitter Root Range, the Cabinet Mountains, the Seven Devils, the Clearwater Mountains in Idaho County, and the northern slope of the Salmon River divide, are the mountains of northern Idaho. The mean elevation of the State is 4,700 feet. The greatest altitude is that of Hyndman Peak, in the south-central region between the upper valleys of the Salmon and Snake rivers.

Climate. The temperature of Idaho is quite varied, ranging from 111° above in summer, to 28° below zero in winter. The valleys are warm during the summer days; but when one gets to an altitude of 3,000 feet above sea-level, the air becomes cool and pleasant. The normal annual precipitation for the State is about seventeen inches, ranging from thirty-seven inches in Shoshone County, in the northern part, to six inches in the southern section. In the central part, there is enough rainfall for a considerable amount of grain to be grown without irrigation.

Soils. The rock from which the soil of Idaho was derived is known as the Columbia River lava, or basalt. This lava is the last addition to the earth's surface in the parts where it is found. It has a wide distribution, though almost wholly confined to the Columbia River basin in Oregon, Washington, and Idaho. There were successive flows of this lava, as is demonstrated by intervening sedimentary deposits. Above the lava the soil is fine and of a dark color; while the subsoil, of equally fine texture, is always of a dark yellow or brownish color, without pebbles or sand grains. The soils on the older rocks are usually light-colored, and contain sand and fragments of rocks and minerals. In the region of the great inter-mountain plateau along the course of the Snake River, the soils consist of fine silty loams, formed through the weathering of the rolling basaltic country at higher levels; or they consist of ash-like and silty loams of ancient lake beds within which volcanic ash was deposited to great depths. Wherever water is available for the irrigation of these lands, they have proven to be wonderfully fertile for the production of general and special crops. On the basaltic uplands, heavy yields of wheat are obtained without irrigation.

Mineral Resources. Mining is the chief industry of Idaho. The Coeur d'Alene district supplies almost one-fourth of the country's output of lead, in which metal Idaho is surpassed only by Missouri. Zinc is generally combined with the lead, and much zinc is recovered. Considerable silver and gold are also mined, and there are large copper deposits along the Snake and Salmon rivers. Limestone is widely distributed, and good brick clay abounds. A large deposit of phosphate rock was discovered in Bear Lake County in 1896. Some coal is mined. Limestone, sandstone, granite, and marble are quarried. Other minerals are iron, cobalt, nickel, mica, phosphate, antimony, tungsten, pumice, and salt.

Agriculture. Idaho commenced the agricultural industry in 1870, with a population of 14,999. A majority of the effective workers, however, were still occupied in placer and quartz mining, freighting, and in mercantile pursuits. There were no roads to speak of, no bridges, not a railroad in the State, and no markets except what the few mining camps afforded. In 1920, farms included over 8,375,500 acres, 53.9 per cent improved. Large areas are naturally arid, but respond splendidly to water. Irrigation enterprises, 1920, embraced over 3,780,000 acres, of which nearly 2,500,000 were irrigated, chiefly in the Snake River valley stretching across southern Idaho, and in the upper reaches of the Salmon River. Hay and forage led all crops in 1923, exceeding in value the cereals combined. Of the latter, wheat formed over 80 per cent, followed by oats, barley, corn, and rye. Other principal crops were potatoes and other vegetables, sugar beets, clover and alfalfa seed, beans, and peas. Fruit culture is rapidly extending (apples, peaches, plums, prunes, strawberries). The State has immense herds of live stock, chiefly sheep. In 1925 there were 2,391,000 sheep, 715,000 cattle, and 340,000 swine in the State.

Forests. The northern part is most thickly wooded. National forests, 1925, covered 19,071,962 acres. The stand is about 72 billion feet, chiefly western white pine; also larch, cedar, white fir, and yellow pine. The annual cut is about 1,000,000,000 feet.

Manufactures. Since Idaho was admitted into the Union as a State in 1890, its development in manufacturing has more than kept pace with its growth in population. The State has an abundance of water-power. In the nine years, 1914–23, the number of manufacturing establishments decreased about 20 per cent, but the value of manufactured products was more than trebled, amounting to over $87,429,000 in 1923. Naturally the industries depend chiefly on products of the forests and the soil for raw material. Working of timber and lumber is the principal manufacturing industry, Idaho being one of the few remaining states which produce these in excess of their domestic needs. With western Montana, it contains about 75 per cent of the country's remaining supply of Western white pine; and one of the world's largest lumber mills is at Potlatch. Flour and grist, and dairy products are other important manufactures.

Boise, the capital and chief city, is located in the vicinity of rich gold and silver mines, and is seat of a United States Assay Office. Pocatello, in southeast, is a thriving railway town on Port Neuf River. Other centers are Twin Falls, Idaho Falls, Nampa, Lewiston.

Transportation. The transportation facilities of Idaho are not so good as those of some of the other Western States, although in the past few years they have been improving rapidly. There are about 2,983 miles of steam and about 149 miles of electric roads. Lewiston, on Snake River, 480 miles from mouth of the Columbia, is accessible to boats from Pacific through opening of the Dalles and Celilo canals on the Columbia.

Defense. Idaho's National Guard, in 1925, was made up of 48 officers and 815 men, organized as two battalions of field artillery, one battalion of infantry, and two squadrons of cavalry.

History. The name Idaho is derived from the Indians, and signifies "gem of the mountains." Lewis and Clark were the first white men to visit the territory, in 1805-1806. The first permanent settlement was made at Fort Hall. The Oregon country, of which Idaho originally formed a part, was claimed by the United States, Great Britain, Spain, and Russia. At the time of the Florida Purchase in 1819, Spain transferred her rights to the United States. Russia did likewise in 1824. In 1818 a treaty had been concluded between the United States and England, under which they were to occupy the Oregon region jointly. In 1846 this joint occupation was terminated by the establishment of the International Boundary at approximately 49° N. In March, 1863, Idaho Territory was organized from parts of the Territories of Washington, Dakota, and Nebraska. It included the area now comprising Idaho, Montana, and part of Wyoming. The organization of Montana and Wyoming as territories, in 1864 and 1868 respectively, left Idaho with its present boundaries. On July 3, 1890, Idaho was admitted into the Union.

Places of Interest. Hot springs, especially south of the Salmon River Divide, are very numerous in Idaho.

CALIFORNIA

Area. California has a coast-line of about 1,000 miles and an average breadth of 200 miles. With a gross area of 158,297 square miles, it is greater than New York, Ohio, and all the New England states combined, and is the second largest State in the Union. The water surface totals 2,645 square miles.

Population.

Year	Population	Year	Population
1900	1,485,053	1920	3,426,861
1910	2,377,549		

The inhabitants in urban territory are increasing at a much faster rate than those in rural territory. Japanese, 1920, numbered 71,952.

Topography. The parallel mountain systems, the Coast Range and the Sierra Nevada, extend northwest and southeast. Between them lies an extensive valley. The Coast Range, 20 to 40 miles wide, borders the coast, with elevations varying from 2,000 to 8,000 feet. It is cut by numerous fault lines; and it is probable that movements along these cause the earthquake tremors to which the region is subject. Far higher and grander than the Coast Range, the Sierra is much less complicated, being one chain of great simplicity of structure, with only here and there a double line of summits. The northern part of the valley between the two mountain ranges constitutes the basin of the Sacramento River, while the southern portion embraces the basin of the San Joaquin. The coast to the south is low and sandy. That to the north is high and rocky.

Climate. The climate of the entire Pacific Coast is milder and more uniform in temperature than that farther east in the same latitudes. The mean temperature along the coast is 6° or 7° lower than that of Vicksburg, Miss., or Charleston, S. C. The State has two seasons — wet and dry. Practically all the rain falls during the months from November to April. The extreme heat of the southeast is tempered by the extremely low humidity of the Great Basin. Death Valley surpasses for combined heat and aridity any meteorological station on earth where regular observations are taken. The mean temperature for the State is between 56° and 63°.

Soils. Adjacent to the rivers, the soils are usually heavy clays and clay loams, constituting the overflow lands and river flood plains. Along the foothills they consist of earth loams, sand loams, and sandy and gravelly loams, which give variety to the soil and the resultant crops. East of the Sierra Nevada range, principally within the Great Basin and mountain chains, are interspersed valleys whose soil is gravelly and sandy. In the extreme northern part of the State, the soil is largely composed of lavas and volcanic ash from extinct volcanoes. In the extreme southern portion, the soils are clays, sands, and sandy loams. Much land is too rough, too elevated, or too arid ever to be made agriculturally available. Much has been accomplished by irrigation, and by the work of the State and national agricultural bureaus in introducing new plants and promoting scientific farming.

Mineral Resources. The discovery of gold in 1848 gave California its reputation as a state rich in minerals. Quartz mining began in 1851. The auriferous belt extends through the northern and central parts of the State, and from the summit of the Sierras to the San Joaquin and Sacramento valleys. The gold occurs in three types of deposits—river gravels or placers, high panels, and veins. California has long led other States in gold, producing over 631,000 ounces in 1924. California's oil, however, is more valuable than its gold. The United States leads all other countries in crude oil, and California ranks first among states, with an output, 1923, over 262,876,000 barrels. It is first in the output of asphalt, platinum, and quicksilver, and has practically a monopoly in borax and magnesite.

Agriculture. The greater part of the State's wealth is produced by agriculture. The spread of irrigation and intensive farming and the increase of small farms during the last part of the nineteenth century, have made California what it is to-day. Over 4,000,000 acres were under irrigation in 1925. Agriculture had its beginning in wheat raising on great ranches, from 50,000 to several hundred thousand acres in extent. Since 1890, however, the acreage devoted to wheat has decreased enormously. Cotton has become important, 54,000 bales being grown in 1924. This rich basin in southeast corner of State lies below sea-level. It is the bed of an ancient lake periodically filled by overflows of the Colorado River, of which lake Salton Sea is a remnant. In 25 years, through irrigation, its farm products have grown from nothing to a substantial part of the State's total.

The leading field crops of the State are: Hay, barley, potatoes (Irish and sweet), wheat, sugar beets, rice, cotton, beans, hops, oats, sorghums, corn, tomatoes, onions, lettuce, spinach, celery, etc. The total value of farm crops, 1923, was $424,794,000.

Growing of fruit and nuts is principally followed, the crop of 1925 being valued at $216,264,000. Of this, raisins represented $14,400,000; oranges, over $68,640,000. Other important fruits are: olives, grapes, peaches, prunes, apricots, apples, pears, canteloupes, plums, cherries, lemons, figs, dates, grapefruit, berries, etc. California leads in canned and dried fruit. Live stock, especially sheep, are extensively reared; the wool clip is large. Dairy products, 1924, $118,647,544.

Fisheries. Nearly $7,000,000 worth of fish were brought into California ports in 1923. Among them albacore and tuna, pilchards (sardines) and flounders were the principal catches.

Forests. The forests of California are notable for the size and beauty of the trees. The most famous is the giant sequoia or redwood. Others are the Douglas and white fir, oak, cedar, and Western yellow and sugar pine.

Manufactures. There has been a marked growth in manufactures. Lack of an abundant supply of coal was long a drawback to the progress of industries, but since the discovery of petroleum in vast quantities and the utilization of water-power in the creation of electrical energy, the difficulty of obtaining sufficient power has been obviated. Electric power, generated by mountain streams, is transmitted to coast cities at great distances. The system is not excelled elsewhere in the world. The leading industries are lumber and timber mills, slaughtering and meat-packing, fish and fruit canning and preserving establishments, cement mills, foundries and machine shops, flour and grist mills, smelting and refining of copper, lead, and zinc, petroleum refineries, and dairying establishments. California ranks far ahead of all other states in the value of canned and preserved products.

Transportation. The principal railroad lines are owned or controlled by the two great continental systems of the Southern Pacific and the Atchison, Topeka, and Santa Fé. The San Diego & Arizona Railway, opened in 1919, gives direct east and west connection between San Diego and the Southern Pacific lines at Yuma, Ariz. The State is noted for its well-built highways. Electric roads are an important means of transportation. The Sacramento River is navigable 262 miles above its mouth, and the San Joaquin is navigable at high water 195 miles. San Francisco and San Diego have the only good natural harbors, but Los Angeles harbor is protected by a government breakwater.

The great Lincoln Highway passes from Reno, Nevada, to Sacramento by way of Truckee, Alta, and Auburn, and a branch by way of Carson City, Nevada, Tallac, and Placerville.

Defense. The National Guard in 1925 had 322 officers and 4,323 enlisted men, organized as three regiments of infantry, one regiment of field artillery, two regiments of coast artillery, and one observation squadron.

History. In 1542, Juan Cabrillo explored the coast and islands in the Santa Barbara region. In 1579, Sir Francis Drake sailed along the coast, and landed a few miles northwest of San Francisco. The first settlement in the country was made by the Spaniards in 1769. California was under Spanish rule until 1822, when, at the close of the Mexican Revolution, it declared its allegiance to Mexico. Immigrants, in 1846, began a revolt against Mexico, while the war of the United States and Mexico was in progress. In February, 1848, the Mexican claims to California were ceded to the United States; and September 9, 1850, California was admitted into the Union.

Places of Interest. California is a land of resorts. The Yosemite Valley, the Big Trees, Lake Tahoe, Santa Catalina Island, the Missions rich in historical associations dating back to the old Spanish and Mexican régimes, and the coast towns, are among the most widely known attractions. Yosemite National Park is one of the largest and most beautiful of the parks.

CALIF. (2)

National Parks and Monuments

(*National Monuments continued from page 108*)

area of 560 acres and is located near the town of Mountainair, **New Mexico.** Created in 1909.

Hovenweep National Monument, situated in the western part of Montezuma County, **Colorado,** and extending into **Utah,** covers an area of 285.8 acres. It consists of four groups of towers, pueblos, and cliff-dwellings, relics of a prehistoric age. Created in 1923.

Jewel Cave National Monument, near Custer, **South Dakota,** was created in 1908, and covers an area of about 1,280 acres. It contains a limestone cavern of remarkable beauty and considerable extent, the limits of which are as yet unknown.

Katmai National Monument, located near the base of the **Alaska** Peninsula, bordering Shelikof Strait, contains a wonderland of great scientific interest to the study of volcanism. Here is located Mount Katmai, which in 1912 gave vent to a violent eruption during which several cubic miles of material were emitted. In the northwestern part of the area, which totals about 1,087,990 acres, is situated the famous Valley of Ten Thousand Smokes, consisting of innumerable fumaroles or miniature volcanos, from which rise jets of steam. Some of the jets throw their steam over a thousand feet in the air. Surrounding the fumaroles are deposits tinted in all shades of the rainbow, which aid in presenting an incomparably beautiful and inspiring spectacle. Created in 1918.

Lava Beds National Monument, lying about 30 miles east of Mount Hebron, **California,** covers an area of 45,967 acres which was set aside by the Government in 1925. It contains remarkable ice caves and is also of historical interest, having served as the battle ground for the Modoc Indian War in 1873.

Lehman Caves were reserved as a National Monument by the United States in 1922. The area, 593.03 acres in extent, contains limestone caverns of scientific interest and importance. The monument is located in **Nevada,** about 35 miles southeast of Ely.

Lewis and Clark National Monument was established in 1908, to preserve a limestone cave of extraordinary beauty, located in **Montana** about 45 miles northeast of Butte. Its maximum measurements are 600 feet long and 400 feet deep, but its numerous passages, filled with marvelous stalagmites and stalactites, make it appear miles in extent rather than hundreds of feet. The total area of the monument is 160 acres.

Meriwether Lewis National Monument, near Hohenwald, **Tennessee,** was set aside in 1925 by the United States. The area, consisting of 50 acres, contains the grave of Captain Lewis of the Lewis and Clark Expedition.

Montezuma Castle National Monument is located near Clarkdale, **Arizona,** and consists of a true cliff-dwelling, situated in the face of a vertical cliff about 80 feet above its base. The castle itself was not all erected at one time, but shows at least three stages of construction. In all probability it was a communal house, each family or unit erecting its rooms according to their best skill and judgment. There was a number of smaller structures in the immediate vicinity. The monument was created in 1906 and is 160 acres in extent.

Mound City Group was reserved as a National Monument in 1923, and covers an area of 57 acres within the limits of the Camp Sherman Military Reservation. It is located near Chillicothe, **Ohio,** and consists of a famous group of prehistoric mounds.

Mount Olympus National Monument, consisting of an area of 299,370 acres in the State of **Washington,** contains many objects of great and unusual scientific interest, including many glaciers. It is also a summer range and breeding ground for huge herds of elk. Created in 1909.

Muir Woods National Monument, originally presented to the United States, in 1908, by Mr. and Mrs. William Kent, consists of 426.43 acres of land near Mill Valley, **California,** covered with a remarkable grove of redwood trees. These giant sequoias, ranging in size from tiny seedlings to century old patriarchs, form a most beautiful forest, unrivaled the world over.

Natural Bridges National Monument, located in San Juan County, **Utah,** contains three natural rock bridges of great size and beauty. There are also numerous ruins of cliff-dwellings perched in the canyon walls in almost inaccessible places. The monument was created in 1908 and is 2,740 acres in extent.

Navajo National Monument is situated in northeastern **Arizona** within the great but little known Navajo Indian Reservation, and consists of three small areas totalling 360 acres. It is of interest on account of being the site of numerous prehistoric dwellings.

Old Kasaan National Monument, located near Ketchikan, **Alaska,** contains an abandoned Indian village in which there are numerous remarkable totem poles and other objects of historical interest. It was created in 1916 and is 38.3 acres in extent.

Oregon Caves National Monument was created in 1909 to protect some limestone caverns of great beauty. Their exact magnitude has not yet been fully ascertained. The area, containing 480 acres, is located in the southern part of Josephine County, **Oregon.**

Papago Saguaro National Monument, located in the Salt River Valley, **Arizona,** represents a typical bit of the desert as it appeared before the famous Roosevelt Dam stored up the water that has made the desert bloom. It was originally created in 1914 and contains an area of 1,940.43 acres.

Petrified Forest National Monument, situated near Adamana, **Arizona,** was created in 1906, and is 25,625 acres in extent. The term "petrified forest" has occasioned much misunderstanding, as many people believe this to be a huge group of standing petrified trees. However, the region may be properly described as containing large deposits of log bearing strata and the buried, petrified, and resurrected remains of a forest that grew somewhere else millions of years ago. No standing petrified trees are existent, but the tree trunks, more or less fractured, dismembered, and lacking the branches, may be seen lying prostrate in or upon the ground.

Pinnacles National Monument derives its name from the spire-like forms developed from rocks of volcanic origin which rise from 600 to 1,000 feet above the floors of its several canyons. Many of the rocks are so precipitous that they cannot be scaled. The area, 2,980.26 acres in extent, was first created in 1908, and is situated near Soledad, **California.**

Pipe Spring National Monument, about 40 acres in area, was created in 1923, to preserve an old ruined stone fort, a relic of pioneer days. Near it is a wonderful spring of cold, pure water, flowing at the rate of over a hundred thousand gallons a day. Located in **Arizona.**

Rainbow Bridge National Monument contains the greatest, among the known natural bridges of the world, 309 feet high and 278 feet from pier to pier. Inasmuch as it is not only a symmetrical arch below, but also presents a curved surface above, the term "rainbow" was applied to it soon after its discovery. This area of 160 acres was set aside by the Government in 1910, and is located in **Utah** within the Piute Indian Reservation.

Scotts Bluff National Monument, near Gering, **Nebraska,** was created in 1919 to preserve a celebrated landmark of the old Oregon Trail. The area of 1,893.83 acres contains a huge rocky promontory with adjoining hills, remnants of the general high plains constituting much of the western part of Nebraska. It is named after Hiram Scott, a "free trapper" who died there about 1828.

Shoshone Cavern National Monument was reserved by the United States in 1909, to preserve a cavern of considerable size located near Cody, **Wyoming.** The area is 210 acres in extent.

Sitka National Monument is an area of great natural beauty in southeastern **Alaska,** about 57 acres in extent, located on Sitka Bay. The site includes the remnants of a warlike tribe, the Kit-Siti Indians who were annihilated by the Russians in 1804 in the so-called "Battle of Alaska." A number of totem poles, collected from various localities in Alaska, is also of interest. Created in 1910.

Timpanogos Cave National Monument, an area of 250 acres, located near Lehi, **Utah,** was set aside by the Government in 1922. It contains a limestone cavern of considerable extent and beauty.

Tonto National Monument, about 30 miles northwest of Globe, **Arizona,** contains a number of well-preserved cliff-dweller ruins of prehistoric interest. The area, 640 acres, was created in 1907.

Tumacacori National Monument embraces 10 acres of land in Santa Cruz County, **Arizona.** Contains an ancient Spanish mission ruin, which is believed to have been founded by Father Eusebio Francisco Kino in about 1691. Created by the United States in 1908.

Verendrye National Monument marks the spot on the left hand bank of the upper Missouri River where the sons of the celebrated French explorer, Verendrye, camped during their explorations in 1742, more than 60 years prior to the expedition of Lewis and Clark. Crowhigh Butte, rising 565 feet above the river, is the central feature of the monument. The total area of 253.04 acres, which was created in 1917 is in **North Dakota.**

Walnut Canyon National Monument, an area of 960 acres, situated a few miles southeast of Flagstaff, **Arizona,** contains cliff-dwellings of much scientific and popular interest. It was set aside by the Government in 1915.

Wheeler National Monument is of great interest from the geological standpoint as it contains numerous examples of eccentric erosion and extinct volcanic action. This monument, 300 acres in extent, located near Creede, **Colorado,** was created in 1908.

White Plains Battle Field, New York, was marked with a stone tablet and established as a National Monument in 1926.

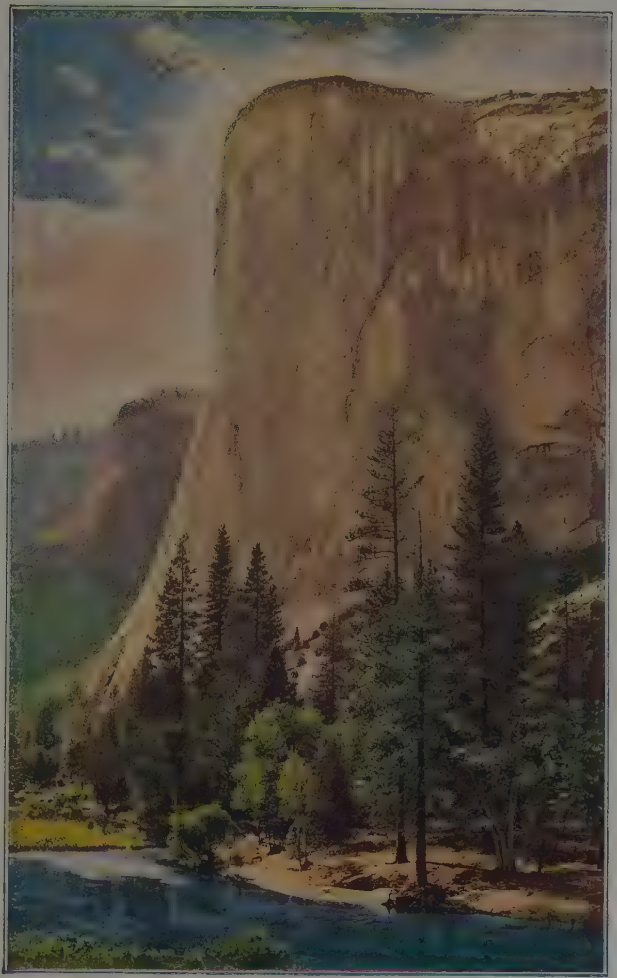
Wupatki National Monument, northeast of Flagstaff, **Arizona,** contains two tracts of land containing about 35 ruins of pueblos supposedly built by the ancestors of the Hopi Indians. The monument, which was created in 1924, has an area of 2,234.1 acres.

Yucca House National Monument, established in 1919, preserves the ruins of a prehistoric village in southwestern **Colorado** a few miles west of Mesa Verde National Park. It consists of 9.6 acres which were reserved by the United States in 1919.

THE LAND OF BIG THINGS

California is the region of year-round roses and of almost year-round sunshine. It is a land of gigantic things, from agricultural enterprises to natural wonders, for the experimental grounds of Luther Burbank at Santa Rosa have produced and continue to produce many of the agricultural and horticultural marvels of the world. In the variety and abundance of its vegetation and plant life and of its game the Sunset State is the richest region of the Union. It is the flower and vegetable seedbed of the world, and heads the list of the states as the home of the vine. For huge finny fighters the waters around Catalina Island are unequaled, while the Yosemite Valley is often likened to the playground of the Titans, its giant forest trees standing as mighty sentinels beyond the memory of man. It is estimated that the oldest of these trees has lived more than 8,000 years. The roaring cataracts and stupendous canyons illustrate the tremendous eroding power of Nature's agents, and in luxuriance of production and sublimity of beauty it brooks no rival.

A sheer mass of granite, El Capitan, rising to a height of 3,300 feet, forms the most notable of the precipitous rock walls of California's famous Yosemite. Glacial action has sculptured enduring monuments to its resistless power, which rise in gigantic majesty and grandeur from the surface of this seven-mile valley 4,000 feet above the sea.



Courtesy of Chicago & North Western Railway

EL CAPITAN, YOSEMITE NATIONAL PARK

In the lower end of the Yosemite Valley, the tossing and tumbling waters of the Bridal Veil, falling from a height of 900 feet and sending up a spray delicate and white as the illusion veil of a maid at the altar, is one of the most potent charms of the Pacific Wonderland. The contrast of the snowy, misty cascade with the dark, unyielding rock formations which encompass it, throws into bold relief this exquisite waterfall.

A stage ride through the giant sequoias of this marvelous valley leaves memories which never can be effaced, nor can there ever be lessened the sense of awe occasioned by their stupendous proportions and majestic grandeur. The greatest of them all, Grizzly Giant, whose diameter is thirty-one feet and its circumference ninety-four feet, stands in the lower Mariposa Grove. Around it are grouped 100 other specimens of the giant sequoia, though no other tree can boast a limb six and a half feet in diameter, branching out from the trunk at a height of 200 feet. A path ten feet high and of almost an equal width, tunneled through the very heart of a living tree, whose diameter exceeds twenty-five feet, passes close to all the enormous sentinels, nearly a dozen of which rise to a height of more than 250 feet.

BRIDAL VEIL FALLS, YOSEMITE, CALIFORNIA

The latest big thing which has occurred in California is the mud eruption of Mount Lassen, a volcano near Sacramento, which has recently burst into activity, giving convincing evidence of the seething mass in its crater.

The numerous tree-bordered avenues and roads in the state are of great charm. Among the most noted are Marengo Avenue of Pasadena and Magnolia Avenue of Riverside. Santa Clara is connected with San Jose by the Alameda, a magnificent avenue of willows planted by the old monks in 1799, while the road to San Gabriel and other missions lead through beautiful orange groves. These quaint old historic missions are an unfailing source of interest, since they have played so prominent and noble a part in the religious life of the state. The oldest of them all is that of San Diego, founded by Padre Junipero Serra in 1769, to be followed at short intervals by Mission de Carlo de Monterey, San Diego D'Alcala, San Luis Obispo, San Antonio, San Miguel, Santa Ynez, San Luis Rey, San Juan Capistrano, and the old Carmelo Mission. In 1786 came the establishment of the Santa Barbara Mission, the only one remaining in the hands of the Franciscan friars. These and other attractions, such as the great sea caves at La Jolla, the healing springs of Paso Robles, the natural bridge at Santa Cruz, the oil lake at Bakersfield, "where riches flow out of the ground," the ostrich farms, the wonderful beaches, the solid architecture of the cities—all recall an enterprising past or prophesy a brilliant future for this rich and prosperous far western state kissed by the broad Pacific.

OREGON

Area. Oregon has 96,699 square miles in gross area, 1,092 square miles being water surface, and ranks ninth in size in the Union.

Population.

Year	Population	Year	Population
1880	174,768	1910	672,765
1890	317,704	1920	783,389
1900	413,536		

In 1850, the population numbered only 13,294. In 1920, it was nearly 60 times as large. Concentrated mainly in the west and north, it is now evenly divided between urban and rural, but the urban is increasing the more rapidly. Density ranges from 635.7 per square mile in Multnomah County (containing Portland), to 0.4 in Harney County. Japanese, 4,151; Chinese, 3,090; Indians, 4,590.

Topography. The State is divided into an eastern and a western division by the Cascade Mountain Range, which runs parallel to the coast-line, about 125 miles inland. The western section is marked by surface features of great variation. Close along the coast, lie the mountains of the Coast Range, which in some places rise directly from the sea. In other places the coast is extremely rugged, with a succession of small valleys and elevated benches. Numerous small streams cut through the Coast Range to the sea. Between the Coast Range and the Cascades, lies the rich valley of the Willamette River, about 200 miles long and 30 broad. In the south the two ranges come together, forming what are called the Klamath Mountains. In this region are the famous Crater Lake and National Park. The Cascades are very rugged, and heavily forested. The highest altitudes in the State are found in this range, Mount Hood rising to 11,225 feet. East of the Cascades, the land is a broken, semi-arid tableland. In the northeast, rise the Blue Mountains, forming the Columbia River drainage. In these mountains are irrigated valleys.

The plateau in the southeastern portion of the State forms part of the Great Basin of the United States, and is broken by ridges, extremely steep toward the east, and gradually sloping toward the west. Here are lava beds and alkali flats, ephemeral and permanent lakes, the whole region scattered with sage brush. The Snake River Plains are deeply sculptured with canyons and escarpments.

Climate. Along the coast the climate is humid, mild, and uniform, because of the influence of the sea. In the east the climate is dry, and the temperature shows great daily and annual range. At Portland, the mean annual temperature is 52° Fahr., with a range between 102° and −2°. In the Great Basin, at Silver Lake, the mean annual temperature is 44°, with a range between 104° and −32°. West of the Cascades, the precipitation is from 40 to 100 inches; east, from 10 to 20 inches. Irrigation is general in the eastern districts, over 982,000 acres being irrigated in 1919, chiefly in Baker, Harney, and Malheur counties.

Mineral Resources. Gold is the principal mineral product of Oregon, and placer mining the principal method of extraction. Output, 1924, was over 28,000 ounces, Baker and Josephine counties giving largest yield. Silver produced same year was over 47,000 ounces. Copper, lignite, coal, lead, brick and pottery clays, granite, marble, sandstone, chromic iron ore, platinum, quicksilver, lead, gypsum, borate of soda, opals, ocher, bismuth, wolframite, garnet, infusorial earth, manganese ore, and asbestos are also found.

Agriculture. Agricultural pursuits are concentrated chiefly in the northwest and north-central districts. Over one-fifth of all land in State was in farms in 1920, the acreage steadily increasing. The principal crops are wheat, hay, and fruits (apples, pears, plums, prunes, cherries, peaches, apricots, etc.). Hops are a large crop. Other crops are: oats, barley, corn, clover, rye, flaxseed, beans, peas, potatoes, sugar beets, sorghum, and mint.

Stock-raising is active. Large numbers of horses, cattle, pigs, and especially sheep are raised. The State is noted for its dairy products—especially cheese, in which it ranks next to Wisconsin.

Forests. About half our standing saw-timber today is in the three Pacific States; and Oregon leads all States, with a total available stand of nearly 494 billion feet. In cut she ranked second, 1924 (after Washington), with 3,665,547,000 feet, chiefly Western yellow pine and spruce, followed by hemlock, cedar, larch, and white and Douglas firs. Forests are chiefly in northern Cascades, and in the Blue Mountains and high plateaus in the norhteast part of the State.

Fisheries. The Columbia River has long been famous for its salmon fisheries, the catch becoming so great that legislative measures were taken to prevent complete depletion of the species by wholesale and wasteful methods of catching. Several hatcheries have been established for propagating the best varieties. Near Portland is one of the largest fish hatcheries in the world. Other great catches besides salmon, are sturgeon, halibut, oysters, cod, smelt, herring, carp, clams, and crabs.

Manufactures. Industrial development is greatly favored by the State's valuable resources of water-power and abundance of raw materials. The principal manufactures are lumber and its allied products. As a furniture manufacturing center, Portland stands among the leading cities in the United States. Shipbuilding has in recent years developed into an industry of great importance, favored by the abundant supplies of large timber. The Douglas fir affords the best masts and spars in the world. Immense quantities of lath and shingles are included in the output of lumber products; and the manufacture of wood pulp and paper is another industry of growing importance. Woodenware factories are numerous. The many tanneries, creameries, and packing establishments provide an outlet for consumption of a large share of the live-stock products of the State.

Some of the principal lines of manufacturing aside from the abovementioned are grist mill and flour products, reduction of ores, machinery, castings, railroad cars, fruit canning, waterproof clothing, agricultural implements, meat-packing, leather goods.

The wool manufacturing of the West is centered largely in the State of Oregon; and one of the largest rubber manufacturing establishments on the Coast is located here.

Transportation. The northern and western portions are traversed by trunk line systems with terminals at Portland. This city is also one of the leading Pacific ports connecting with the ocean by the Columbia and the Willamette rivers. In the southwest, transportation facilities are somewhat deficient.

Defense. The National Guard of 3,040 members consists of a brigade of infantry, a regiment of coast artillery, two batteries of field artillery, a company of engineers, and one hospital company.

History. The region was first visited in 1543, by Bartolomé Ferrelo, a Spaniard. In 1579, Francis Drake came to the Oregon coast, seeking a way home to England by the Northwest Passage. At long intervals thereafter Spaniards visited the coast. In 1774, Juan Perez sailed along the seaboard south from 54° N. Lat. This is the first real, undisputed exploration of the Oregon coast. The next year, Bruno Heceto discovered the mouth of a great river, presumably the Columbia. In 1778, James Cook sighted the coast; and in 1792, Robert Gray made a definite discovery of the Columbia, naming the river after his ship. This discovery gave the United States claim to all the territory drained by the Columbia and its tributaries. In 1805-1806, Meriwether Lewis and William Clark passed through the region overland from the east, sailing down the Columbia to the coast. In 1811, agents of the Pacific Fur Company established a trading post at Astoria, the first permanent settlement in the State.

Russia, Spain, England, and the United States all laid claim to the region; but Spain and Russia soon relinquished their claims by treaty, and England and the United States agreed to occupy the region jointly. Many settlers and missionaries entered the country, which was held in control by the Hudson's Bay Company, the successor of the Pacific Fur Company. By 1844, American settlement had become so thick that demand for a definite location of boundary between Canada and the United States became the Democratic campaign slogan. The Democratic candidate Polk was elected; and tension between the two countries caused them to enter into a compromise placing the boundary approximately at the 49th parallel. In 1848, Oregon was organized as a Territory; and on February 14, 1859, admitted as a State.

Places of Interest. Crater Lake National Park is one of the great scenic attractions. The lake is in the Cascade Mountains, near western border of Klamath County; and is 8 miles long, 6 wide, 1,996 feet deep; elevation, 6,300 feet. It occupies an extinct volcanic crater, with vertical walls rising 800 to 2,000 feet.

WASHINGTON

Area. The gross area of Washington is 69,127 square miles, of which 2,291 square miles are water surface. The State ranks nineteenth in size among the states of the Union.

Population.	Year	Population	Year	Population
	1870	23,955	1900	518,103
	1880	75,116	1910	1,141,990
	1890	357,232	1920	1,356,621

King County, containing City of Seattle, has the highest density of population; and Skamania County, the lowest. Though the State is comparatively new, the urban population already exceeds the rural in numbers, the proportion in 1920 being 55.2 to 44.8.

Topography. The Cascade Mountains divide the State in an eastern and western division. In the western part, including about one-third of the State, the surface is much broken by ranges and stream valleys. The Coast Range lies along the coast, enclosing with the Cascades the Puget Sound valley. In the northeast is a westward extension of the Rockies, and in the center and south lies a portion of the Columbia Plateau district. In the extreme southeast lie the Blue Mountains. The mountain regions are rugged, and deeply cut by valleys. Mount Rainier, 14,408 feet high, is the highest peak in the State. The Coast Range rises toward the north in the Olympics, a rugged, lofty mountain mass. In the extreme east is a lava plateau deeply cut by coulees.

Climate. The climate of western Washington is much influenced by the ocean, which causes equability of temperature and considerable moisture. The mean annual temperature is 50° Fahr. In the east, the monthly and annual range between extremes of temperature becomes great. Rainfall ranges from 21 to 120 in. on coastal slope, to 6 to 12 in. east of Cascades to Columbia valley, and 13 to 25 in. in eastern wheat belt.

Soils. In the Coastal region, the soils are silty loams, and silty clay loams derived from the weathering of sandstone, shale, and basaltic rock. Numerous alluvial valleys dissect the region, loams and silty clays predominating. These same soils are found in the Columbia basin and the Puget Sound basin. The soils of the glaciated portion in the north are stony, gravelly, and sandy loams. The eastern part of the State is semi-arid, the soils being chiefly fine sands, sandy loams, and clay soils derived from basaltic rocks and volcanic ash.

Mineral Resources. Coal is the chief mineral product of Washington. Others of commercial importance are gold, silver, copper, lead, zinc, lime, and clays. The quarries produce granite, sandstone, marble, and limestone. Cement, iron, antimony, arsenic, potash, manganese, quicksilver, platinum, and tungsten are produced.

Agriculture. Since 1880, progress in agriculture has been very rapid, the farms in 1920 having increased to over ten times the number in 1880. In 1880, the acreage of land in farms was 3.3 per cent of the total land acreage of the State. In 1920, the percentage had increased to 31 per cent. Nearly 530,000 acres were irrigated, 1920, chiefly in semi-arid plateau east of Cascades to Columbia River. East of this stream, lies the great wheat belt, in which the State leads on the Coast. Irrigation is practiced here also. In 1923 wheat formed over 80 per cent of total cereal crop value for State, and 30 per cent of all crops, hay and forage ranking next. Oats, barley, corn, rye, buckwheat, peas, beans, flaxseed, are grown. Vegetables (potatoes, etc.), hops, and sugar beets are important. Much of the irrigated land in eastern Washington is devoted to fruit. Apples chief crop, others being peaches, pears, plums, prunes, and berries.

There are still in eastern Washington large tracts of semi-arid land devoted exclusively to grazing. The sheep, cattle, and pigs raised are the basis of large meat-packing and dairy industries. Annual wool clip is about four and a half million pounds.

Forests. Washington has led all States in lumber production since 1905, the total cut in 1924 being 6,267,343,000 feet, chiefly Douglas fir, Western yellow and white pine, hemlock, spruce, larch, cedar, and white fir. She ranks second (next to Oregon) in available timber supply, with stand, 1919, of about 334 billion feet. Forests cover about 15,000,000 acres, chiefly on the western slopes of the Cascade and Coast Ranges and in the Olympic Peninsula. Douglas fir predominates on the western slopes.

Fisheries. The fisheries are of great value, salmon making nearly 50 per cent of value of catch. Columbia River, and Puget Sound with its 1,600 miles of shore, are the chief sources of supply. Washington's salmon pack, 1923, was over 975,000 cases. Halibut, shad, cod, mackerel, herring, oysters, shrimps, etc., are also taken in great numbers.

Manufactures. The leading industrial cities are Seattle, Spokane, Tacoma, Everett, Bellingham, Yakima, Walla Walla, and Aberdeen. Manufacturing establishments in the State, 1923, numbered 3,098, employing an average of 111,663 wage-earners, paying out $156,435,000 in wages, using raw materials costing $372,044,000, and putting out products valued at $678,543,000, an increase of over 200 per cent in ten years. Manufacturing industries are favored by natural abundance of water power, coal, and raw materials. Lumber, the leading industry, forms about 35 per cent of the value of all manufactures, with about 500 mills, besides nearly 200 shingle mills putting out 5 to 6 million thousands of shingles. Other important industries are shipbuilding, flour and grist milling, slaughtering and meat-packing, canning or preserving fish, fruit, etc. There are smelters at Tacoma, Everett, and Northport.

Transportation. Puget Sound is one of the best commercial harbors on the Pacific Coast. It is connected with the East by important railway lines. The principal railways of the State are the Northern Pacific and subsidiary lines; the Great Northern; the Oregon-Washington Railroad & Navigation Company; the Chicago, Milwaukee and St. Paul; and the Spokane, Portland & Seattle. Steamers ply on the Columbia and the Snake rivers, and the Dalles and Celilo canals enable them to reach Lewiston, Idaho, 480 miles from mouth of the Columbia. Important ports are Seattle, Tacoma, Port Townsend, Everett, and Bellingham, besides Grays Harbor on the Pacific.

Defense. The National Guard, in 1925, consisted of 173 officers and 2,334 enlisted men, comprising one regiment of infantry, one regiment of field artillery, one regiment of coast artillery, one tank company, one motor transport company, one observation company, and one ambulance company. The Federal Government maintains a large dry-dock and naval depot at Bremerton on Puget Sound.

History. After various early visits to the coast by Spanish and English explorers, Captain Robert Gray and John Kendrick were sent out by the Boston merchants to buy furs from the Indians on the Pacific Coast. They reached Nootka Sound, Vancouver Island, 1788, and a fort was erected. Kendrick was killed by the Indians, but Gray returned to Boston, and in 1790 set out on a second voyage. On this voyage, he discovered and explored the Columbia River, 1792. On this the United States based its claims to all the region drained by the Columbia and its tributaries. The whole region became known as Oregon.

Fur traders penetrated from the East, and in 1804 to 1806 Lewis and Clark made their famous exploration of the Northwest. English and American fur companies both claimed the region, and finally reached an agreement to occupy it in common. Settlers were encouraged to enter, and the numbers of Americans in the country increased rapidly. Missionaries played an active part in the early days of settlement in the Northwest.

In 1846 the question of English or American supremacy became acute; and in view of the great tension, the slogan of the Americans being "fifty-four forty or fight," a treaty was drawn up establishing the boundary at approximately 49° north. In 1853, the Oregon boundary was determined. In 1863, the eastern boundary with Idaho was fixed; and on November 11, 1889, Washington was admitted as a State.

Places of Interest. The fine climate, great timber lands, and beautiful mountains, with excellent fishing streams, attract thousands of tourists to Washington. Mount Rainier has been reserved as a national park. At Tumwater is the earliest American settlement north of the Columbia. The ocean shore is lined with popular seaside resorts with splendid beaches. Seattle, the chief city, has a magnificent deep-water harbor, from which ships sail to all parts of the world.

SPLENDORS OF ROCK AND ICE

CRUISING IN ALASKA

Courtesy of Chicago & North Western Railway

The sparkle and glisten of floating ice, the bold cliffs of a frozen seacoast, the deep blue of glacial fissures, the majesty of lofty snow-covered mountains, the splendor of late sunsets, combine to make a cruise through the waters of America's far northern possession a delight, but more than that, to awaken to wildest enthusiasm every beholder of Nature's magic touch and transforming power in an Arctic wilderness.

Alaska was formerly called Russian America. Two of its mountain ranges—the St. Elias and the Alaskan—are noted for the enormous height to which rise several of their peaks. In the icy splendor of this far northland rises the loftiest summit in North America—Mt. McKinley, towering to a height of 20,300 feet. If Mt. Logan in Canadian territory be excluded, the next peak in height is Mt. St. Elias, while Mounts Wrangell, Foraker, Crillon, Vancouver, and Fairweather follow after, each of them exceeding 15,000 feet.

It is only within the past thirty years that the treasures of Alaska have been even partially revealed. The discovery of gold in the Klondike induced a mad rush of fortune hunters. Those reaped a rich harvest who were able to remain and endure the horror of the winter darkness, which seriously affects the spirits and finally the minds of men in those northern lands. In midwinter the sun barely appears above the horizon and then for only four or five hours a day, and the gloom of perpetual night prevails. From December to April the thermometer frequently falls half a hundred and more points below zero; but the rivers, even the great Yukon, which have been solid masses of ice for months, begin to flow in May, and thereafter summer comes on speedy wing.

The islands of the Alexander Archipelago are very beautiful, with their steep, craggy coasts and heavily wooded mountain tops, while the rivers run through most picturesque cañons, made grandly turbulent by the glaciers discharged into their upper waters. The glaciers are extraordinary in the matter of size and thousands of them fill the cañons and valleys. A most superb spectacle is afforded by the Seward Glacier, which falls over in repeated cascades as it descends from Mount Logan. Its length is more than fifty miles, while its narrowest width is three miles. The Muir Glacier, with its daily discharge during the summer months of 30,000,000 cubic feet, is the most noteworthy of the tidewater glaciers, which number more than a score and a half. Its area is 350 square miles, with an under-surface extension of probably 1,000 feet. It throws off enormous masses of ice into the sea, for its current moves several feet daily.

There are more than a dozen live volcanoes to add to the wonders of this vast Arctic realm which long was considered a miner's El Dorado. Entrance to the rich ore country is effected through the White and Chilkoot passes, which are the highest points along the Yukon. Fjords and rivers are the main roads in Alaska, and are often alive with the canoes of the Eskimos, the native inhabitants, who are also expert drivers of dog-sledges.

It is a long stretch but a most enjoyable and remarkable trip from the Sitkan, Aleutian, or Yukon regions to the mainland of the United States on the Pacific Coast. Washington and Oregon are the lumberjacks' paradise, but they are not less rich in those other trees which provide a glorious and unfailing harvest of golden and rosy-cheeked apples of delicious flavor. Another abundant commodity is provided by the waters of the Columbia River, which yields a never-failing supply of the finest species of salmon. Dark purple prunes and bright green hops are raised in these states in an abundance exceeded only by that of roses, whose profusion and fragrance are phenomenal.

Forming a stupendous natural gateway for the railroad connecting Portland, Oregon, with the numerous beautiful waterfalls along the Columbia River, the Pillars of Hercules are prominent and extraordinary landmarks. Rooster Rock emerges in the very midst of the river, and not far distant is Castle Rock, rising 1,000 feet above the water. The Columbia is unsurpassed for the magnificence of its river scenery, which may be viewed by a short trip from Portland, the only fresh water harbor on the Pacific coast. Portland is also the largest lumber export city in the world, for within the borders of Oregon may be found more than one-fifth of all the standing timber of the United States.

THE PILLARS OF HERCULES

ALASKA

Area. The area of the Territory of Alaska comprises 586,400 square miles, or considerably more than twice the area of the State of Texas, the largest state in the Union.

Population.	Year	Population	Year	Population
	1900	63,592	1920	55,036
	1910	64,356		

In 1920, 27,883 of the population were whites. Indians (Eskimos and Aleuts), with some Chinese, Japanese, and negroes, comprised the remainder. The large increase from 1890 to 1900 was caused by the discovery of gold. In 1918, whites dwindled to 25,000, but have since gradually increased. Eskimos, 13,698.

Topography. Alaska, between extremities, occupies about as many degrees of latitude and longitude as the United States. The greater part, however, is taken up by the great stretch (to the west) of the Aleutian peninsula and islands, and the extension (to the south) of the narrow Alaskan "panhandle." The coast-line along the Pacific is generally precipitous, much indented by deep fjords, and in some places bordered toward the sea by slight stretches of beach. In a broad way, the larger topographic features correspond with those of the western United States. Along the coast lies the Pacific Mountain system, succeeded inland by a great plateau, then a Rocky Mountain system, and finally, in the extreme north, a great plains region sloping to the Arctic Ocean.

The Pacific system is made up of three coastal ranges, and an inland range in which is found the loftiest peak in North America, Mt. McKinley, 20,300 feet high. The Aleutian Islands are the crests of submerged peaks forming part of the Alaskan mountain system. Many of these peaks are volcanic, but all are practically inactive. Numerous glaciers, notably the Muir and Malaspina, flow from the coastal ranges toward the sea, several of enormous extent fronting the sea for miles.

The plateau region is marked by flat-topped ridges and rounded hills of almost uniform height, stream erosion having cut down the original level with the exception of these heights. In the Yukon Basin is an area of great dead-level flats. Mountain masses rise out of the basin, except toward the Yukon delta on the west coast, where the plateau is generally unbroken and slopes gradually down to the sea.

The Rockies are divided into two contiguous ranges of inconsiderable altitudes. Beyond the Rockies, to the north, is a plateau succeeded by a low tundra or Coastal Plain region sloping down to the Arctic Ocean.

Climate. The climate along the Pacific coast is much similar to that of Oregon and Washington. The mildness is caused by the eastward drift of the return Japan current in the Pacific, giving the coast a mean annual temperature of from 54° to 60° Fahr. The temperature rarely falls below zero, and rarely exceeds 75°. The region of highest extremes, from about 90° to –60°, is inland on the plateau.

Rainfall is heavy along the coast, varying from 80 to 110 inches, and increasing westward along the Aleutians. Almost eternal fog prevails in Bering Sea. North, along the west coast, the rainfall gradually diminishes. In the interior the summers are short and generally warm, the winters long and severe. The mean temperature at Fort Yukon in July is 64°; for January it is –31°.

Agriculture and Soil. The soils in the Yukon Valley and along the coast are capable of cultivation. Hardy vegetables and cereals can be raised. Grasses grow in abundance. Practically the entire agricultural development has been since 1900, when 159 acres were cultivated. In 1920, farm acreage had increased to 90,652 acres. Little is grown beyond domestic needs. Hay and forage represent over half the value of all crops; potatoes, nearly 25 per cent. The hardier vegetables (cabbage, carrot, turnip, etc.) grow well in all parts, and wheat, oats, rye, and barley yield well in interior, but corn has never been a success. Reindeer furnish food, clothing, and transportation; dogs also used as work animals and for sled travel in winter.

Forests. Southeastern Alaska, 1923, had 25,000,000 acres of timber, practically all of the territory's high-grade timber, mainly conifers, Sitka spruce leading. Other varieties are hemlock, birch, poplar, cottonwood, alder, willow, and yellow cedar.

Fisheries. The fisheries are one of the chief sources of wealth. The industry, 1924, employed 25,194 people. The canned salmon pack that year was 5,294,915 cases, $33,007,135; and Alaska has also greatest halibut fishing banks of the Pacific. Herrings and whales are caught for fertilizer and oil. Furs also are a great source of wealth—seal, sea-otters, beaver, fox, mink, and marten. Seal herds at Pribilof Islands breeding ground, number about 650,000; catch limited to surplus males, about 20,000 being taken 1923. Pelagic sealing is unlawful.

Minerals. Mining is the chief industry. Gold first found near Juneau, but later at Nome (1898), Fairbanks (1906), and elsewhere. The total output of gold, 1880-1922, was about $335,000,000. Silver and lead are recovered as by-products. Copper abounds in Prince William Sound, Ketchikan, and Copper River districts, tin, on Seward peninsula. Gypsum and sulphur are also mined.

Coal lands are of very wide extent, now reached by rail from Seward.

Manufactures. The chief manufacturing industries of Alaska are the canning and preserving of fish (see under "Fisheries," above), and the making of timber, lumber, and pulp (see under "Forests"). Others are making foundry and machine shop and sheet-metal products. Many employees stay only during the 5-month canning season. Total manufactured output, 1919, $41,495,243.

Transportation. Railroad mileage has increased rapidly in late years, and the important mining centers are connected by rail with the coast. The oldest road runs from Skagway to White Horse (Canadian Yukon), whence the Yukon can be descended to its mouth.

The waterways of Alaska are of great commercial importance. Chief among them are the Yukon River, navigable about 1,500 miles, its tributaries, and the Kuskokwim. Great fjords on the southern coast furnish excellent transportation routes some distance inland.

History. The first explorations of the Alaska region were made by the Russians, Chirikov and Bering, in 1741. Trappers and fur traders entered the region; and in 1786 Gerassim Pribilof, a Russian fur hunter, discovered the Pribilof Islands, the breeding ground of the Alaskan seal. A Spanish expedition visited the region in 1774, and in 1776 Captain Cook surveyed part of the coast. In 1799 a Russian American Company secured a monopoly of the fur trade, and in 1821 Russia attempted to exclude foreigners from the Bering Sea. This aroused a controversy which resulted in treaties by Russia with England and the United States, fixing the boundaries of the Russian possessions in America.

In 1867 the United States purchased Alaska for $7,200,000 in gold. Until 1877 authority was vested in the War Department; but little authority was exercised until 1884, when the "Organic Act" provided civil government under a Governor appointed by the President. Alaska became formally a Territory, 1912, with local legislature. Fur seal dispute with Britain, and boundary dispute with Canada, settled by arbitration, 1893 and 1903, respectively. The sealing decision denied the American claim to exclusive jurisdiction over the herds outside territorial waters, and both countries agreed to impose strict regulations on seal hunting. The boundary decision denied Canada a sea outlet at head of Lynn Canal, which lies wholly in American territory.

Places of Interest. Alaska contains scenes of unparalleled interest in the great glaciers, some advancing, destroying everything in their path and casting great blocks of ice into the sea, others apparently stationary with great forests on their backs, and still others receding and leaving immense deposits of rocks and soil, of intense interest to geologists, affording evidence explaining many of the phenomena of the great ice age in America. The huge Malaspina glacier covers an area one-tenth the size of Switzerland; the Muir glacier daily discharges 30,000,000 cubic feet of ice and water into the sea. The glaciers may be approached closely by vessels, and annually many hundreds go to see the unusual sight.

The great gold mining centers are Fairbanks, Nome, Douglas, Treadwell, Juneau, and Seward. The capital, formerly at Sitka, the oldest town in the Territory, was transferred to Juneau in 1906.

Mt. McKinley is the highest peak in North America. Other great Alaskan peaks are Mt. St. Elias (18,024 feet) and Mt. Wrangell (14,000 feet).

DOMINION OF CANADA

Area. The land area of Canada is 3,654,200 square miles; water, 142,923; total, 3,797,123. This is 179,450 square miles larger than the United States, including Alaska. British North America comprises Canada and Newfoundland. The latter is still (1927) outside of the Canadian Confederation.

Population.

Year	Population	Year	Population
1901	5,371,315	1921	8,788,483
1911	7,206,643	1928(est.)	9,519,220

About 28 per cent of the people of Canada are French-speaking, and over 50 per cent are of British descent. There are about 105,000 Indians and about 3,300 Eskimos. Farmers of the United States have been attracted by the excellent agricultural conditions, and are entering the Prairie Provinces in large numbers.

Climate. The climate, on the whole, is less severe than latitude would indicate, though extremes are greater than in corresponding European latitudes. Broadly speaking, climate in north is severe; in south, genial and temperate; everywhere healthful. Temperature is much modified by proximity to seas and lakes, and by varying elevation. South of the St. Lawrence River, and inland in the Great Lakes region and farther west, the cold is moderated, the mean annual temperature rising from about 40° in the east, to about 65° in Alberta, where the warm chinook wind from the west has much influence. Toward interior, the range of variation in temperature increases, recorded extremes being 108.2° in Alberta, and –79° in Northwest Territories. Along the Pacific, the climate is mild and equable, owing to the warm Japan current.

Rainfall decreases inland, averages ranging from 38.9 inches in Nova Scotia, and 41.1 inches in British Columbia, to 14 to 22 inches in the Prairie Provinces (Manitoba, Saskatchewan, and Alberta), where irrigation is quite extensively practiced.

Religion. There is no established church in Canada. The Roman Catholic denomination is numerically the strongest, comprising about two-fifths of the population, and is concentrated chiefly in the Province of Quebec. Other denominations, ranked according to numbers, are the Presbyterians, Methodists, Anglicans, Baptists, Lutherans, Congregationalists, and miscellaneous.

Government. Canada is the largest self-governing Dominion in the British Empire. As such it enjoys responsible government of the British type, administered by an executive Council (or Cabinet), acting as advisor to the representative of the Sovereign, the Governor-General. This Council is responsible to and possesses the confidence of the representatives elected to Parliament by the people, and gives place to other persons more acceptable to Parliament whenever that confidence is shown to have ceased to exist. Legislative power is exercised by a Parliament of two houses, the Senate and the House of Commons.

The nine provinces have each a separate parliament and administration, with a Lieutenant-Governor appointed by the Governor-General. The Territories and Provisional Districts are each governed by a Commissioner and Council.

Education. The Provincial Governments control the educational systems, which are free. The public schools are supported by government grants and local taxation, and are all non-sectarian, except that Roman Catholics have separate schools in Quebec, Ontario, Saskatchewan, and Alberta. There are 23 universities and 65 colleges.

Forests. Timber lands rank next to farming lands as a source of national wealth, and measures looking toward timber conservation are being taken (1926). Forests in the Prairie Provinces, the Northwest Territories, and the 40-mile-wide Railway Belt in British Columbia, are under Dominion control; elsewhere, under Provincial. The total forest area is about 1,200,000 square miles, less than half merchantable saw-timber. Eastern Canada, except the Arctic plains to the north and limited areas under cultivation, is largely covered by forests, chiefly pines and firs, with many valuable deciduous trees. A great part of British Columbia is also magnificently forest-clad, with conifers predominating, the Douglas fir attaining great size. The available timber supply of Canada, however, in spite of her larger area, is only about one-fourth that of the United States, and could supply the present United States demands only 12 to 15 years. In 1922, mills numbered 3,957, and nearly three billion feet of lumber were cut, besides many millions of lath and shingles. Considerable timber and pulp are exported.

Agriculture. The leading industries of Canada are agricultural and pastoral. The Prairie Provinces, including valleys of the Red, Athabaska, Saskatchewan, and Peace rivers, lead in extent of farming lands; but there are also large, rich areas in British Columbia, southern Ontario, the Eastern Townships of Quebec, and the Maritime Provinces. Nearly 57,231,000 acres were cultivated in 1923, with crops valued at $899,166,200. Wheat, the leading cereal, had 22,671,864 acres, with crop of 474,199,000 bushels, valued at $316,934,700. Hay and clover had 9,725,602 acres; crop, 14,844,900 tons, $162,882,000. Other crops in order of value were oats, potatoes, fodder corn, barley, turnips and other roots, rye, mixed grains, alfalfa, corn, buckwheat, flaxseed, peas, beans, tobacco, and sugar beets (in Ontario only).

Live-stock and dairy interests give Canada high rank, and cheese is a great item of export. Fur farming (especially fox) has become important. Fruit culture is prosperous in Eastern Canada and British Columbia, apples, pears, plums, peaches, apricots, grapes, etc., growing luxuriantly.

Fisheries. Canada's lakes, rivers, and 12,000 miles of shore fisheries (5,000 miles on Atlantic, 7,000 on Pacific) yield almost inexhaustible supplies of fish. Over 68,964 people are engaged in the industry, the products being valued at over $41,800,000 in 1922. The lobster fisheries of Quebec and the Maritime Provinces are the largest in the world. Salmon, forming nearly one-fourth of total catch, are taken chiefly in British Columbia, the 1922 catch being valued at $13,593,000. Cod, lobster, sardines, halibut, herring, haddock, mackerel, whitefish, trout, pike, pickerel, sturgeon, are other important catches.

Minerals. Minerals are found in all parts of Canada, but the chief mining districts are Nova Scotia, British Columbia, Quebec, northern and western Ontario, Alberta and Yukon Territory. Coal and lignite fields, chiefly in Atlantic and Pacific regions, cover 100,000 square miles, with estimated reserves of 1,360 billion tons, two billion of which are anthracite. 16,990,571 tons, valued at $72,058,986, were mined in 1923. Canada leads the world in the production of nickel (62,453,843 pounds in 1923, value $18,332,077) and asbestos. In 1923 she ranked third in gold production with 1,233,341 ounces, worth $25,495,421, and in silver with 18,601,744 ounces valued at $12,067,509. In 1923 she produced 86,881,537 pounds of copper, 20,739 tons of pig iron from native ore, 111,234,466 pounds of lead, 60,416,240 pounds of zinc, 170,169 barrels of petroleum, 202,397 pounds of salt and 15,064,661 barrels of cement. Other important mineral products were gypsum, natural gas, cobalt, pyrites, clay products, stone and lime.

Manufactures. The manufactures of Canada have developed notably since the adoption of a protective policy in 1879. They are concentrated principally in the Provinces of Ontario and Quebec, and are dependent chiefly on the products of the fields and forests. Industrial establishments, 1922, numbered about 22,184, representing an invested capital of over $3,125,772,761, employing 462,573 wage-earners, and putting out products valued at $2,439,843,766. The future of the pulp and paper industry is of vast importance, and large pulp and paper mills have been built, using the great supplies of spruce, poplar, etc. In 1922, flour mills numbered 1,364.

The leading industries, in order of the values of products in 1922, were as follows: flour and grist-mill products, slaughtering and meat packing, pulp and paper, saw, lath and shingle mills, butter and cheese, electric light and power, automobiles, cotton yarn and cloth, refined sugar, refined petroleum, printing and publishing, bakery products, tobacco products, shoes, hosiery and knit goods, confectionery.

Commerce. The foreign trade of Canada is largely with Great Britain and the United States. In 1913, last year before the War, imports were nearly $660,000,000; exports, over $460,500.000 In 1923, imports totaled over $802,579,244, over 67 per cent coming from the United States, and less than 18 per cent from the United Kingdom; while exports totaled nearly $931,451,443, of which over

LOST CHANNEL, THOUSAND ISLANDS, ST. LAWRENCE RIVER

Eugene J. Hall, Photographer

OUR NORTHERN NEIGHBOR

The St. Lawrence River, which, with Lake Ontario, separates New York State from her next-door neighbor on the north, is one of the mighty rivers of the world. Ninety miles wide where it merges into the Gulf of St. Lawrence, at other places little more than a mile in width, it varies charmingly in character throughout its length.

Strictly speaking, this river comprises much more than the outlet to Lake Ontario. Really it may be said to rise at the source of the St. Louis River; between Lakes Superior and Huron it is called the St. Mary's; between Lakes Huron and Erie, the St. Clair and Detroit; between Lakes Erie and Ontario, the Niagara; while between Lake Ontario and the sea it is the St. Lawrence proper.

Its uses, too, are varied. As a great highway from the interior to the Atlantic, as the source of power which is being increasingly chained for the service of industry, and as a place of beauty and recreation, it is of tremendous importance. Between Kingston and Brockville, soon after its rise in Lake Ontario, the river is broken by a great number—some 1,700—of glaciated summits, the picturesque "Thousand Islands" which are such an attraction to vacationists. Many are popular summer resorts, with accommodations for the public, while others are private property, with the country homes of the wealthy. The winding voyage among the islands is one of rare beauty, romantic whether by day or by night.

Almost at the other extreme of Lake Ontario, and a journey of approximately fifteen hours by steamer, lies Toronto, the capital of Canada's richest province and second city of the Dominion. To the warlike Hurons it was "a place of meeting," as the name signifies; to its people of to-day it is a place of homes, being essentially a residential city. Most of its houses stand alone, with lawns and abundant trees. There is much of interest to be seen in Toronto. Famous for educational institutions, including the university supported by the province, there are many other splendid buildings. At the south end of Queen's Park is the "new" parliament building (erected 1888–92), an imposing structure of red sandstone in the neo-Greek style. Near at hand is a monument to the Canadian volunteers who fell in the Fenian raid of 1866. Queen's Park originally belonged to the university, but has reverted to the public as a pleasure ground.

PARLIAMENT BUILDING, TORONTO

Copyright, Detroit Photographic Co.

40 per cent went to the United Kingdom, and only 39.6 per cent to the United States. In 1924, imports were nearly $900,000,000 (over $600,000,000 from United States, and only $153,613,003 from the United Kingdom); while exports totaled over $1,000,000,000 (nearly $430,750,000 to U. S. and $360,094,021 to United Kingdom).

Canada holds fifth place among the countries of the world with respect to aggregate trade, following the United Kingdom, United States, France, and Germany. The leading imports are: iron and steel, cotton, sugar and molasses, coal, wool, vehicles, silk, wood, tobacco, meats, hides, leather, rubber, tin, flax, hemp, jute, etc.

The leading exports are: grain (chiefly wheat), wheat flour, timber, wood pulp, meats, minerals (iron and steel, silver, copper, asbestos, nickel, gold, etc.), paper, fish, cheese, butter, furs, hides, leather, etc. Canada is the world's greatest cheese exporter.

Defense. The National Defense Act of 1922 authorized a permanent militia force of 10,000 men, although less than 3,500 are in service now. The non-permanent militia totals 123,461 men and officers. There is in addition a reserve militia of civilians. The Canadian naval force consists of 1,970 men and two destroyers and four mine-sweepers.

Historical. First explored by English under John Cabot, 1497-98. First settled by French as result of Cartier's explorations, 1534-35-40; and Champlain's, 1603-08. Quebec founded 1608, by Champlain. Hudson's Bay Company chartered 1670, securing practical monopoly of control over the great Northwest, which continued till late in the 19th century. Capture of Quebec by English under Wolfe, 1759, sounded knell of French régime, and marked end of long struggle between French and English for supremacy in North America. The French rights to Canada were ceded to Great Britain, 1763. Dominion formed July 1, 1867, by confederation of the Provinces of Ontario, Quebec, New Brunswick, and Nova Scotia.

Northwest Territories formed 1870, embracing Northwestern Territory (former Rupert's Land) purchased from Hudson's Bay Company. Manitoba created a Province 1870; British Columbia admitted 1871, and Prince Edward Island 1873; Yukon made a separate Territory 1898; and Alberta and Saskatchewan made Provinces 1905, out of the former Provisional Districts of Alberta, Athabaska, Assiniboia, and Saskatchewan.

NEWFOUNDLAND

This island, the oldest of Britain's overseas colonies, lies off the northeastern American seaboard, in the latitude of North Dakota. **Area** 42,734 sq. m., not including Labrador. Extreme width, 300 miles; length, 419 miles. **Population,** 1927, 262,177.

The **surface** is a glaciated plateau diversified by hills and drainage basins. The hills usually culminate near the coast, and then spread out into an undulating country consisting largely of barrens and marshes, and intersected by numerous rivers and lakes. The chief rivers are the Exploits, Gander, and Humber, and the largest lake, Grand Lake. The coast-line, 1,200 miles, is deeply indented, affording many good harbors. The fishing ground of the "Grand Banks" stretches 600 miles eastward, a submarine plateau built up of debris deposited by icebergs carried southward by the Labrador current. To these bergs are due the fogs prevailing especially on the southern coast. The **climate** is healthful, summers being short and warm. Mean annual temperature at St. John's is about 40°, ranging from 23.6° for February, to 60.5° for August. Rainfall is abundant, averaging 40.74 inches; and winter snowfall is very heavy, 121.64 inches. Rich **forests** of black spruce, pine, and larch cover large areas, especially in river valleys. Good **agricultural** land is generally found around the lakes and along the rivers, and large tracts are fitted for grazing. The leading crops are hay, potatoes, cabbage, turnips, oats. Live stock (horses, cattle, sheep, swine) are reared. Lumbering is carried on in north; and pulp and paper industry is growing, there being large mills at Grand Falls and Bishop's Falls on Exploits River. Shipbuilding important.

The sea, however, affords the principal occupations, the annual product of fisheries being valued at $10,000,000. The cod fisheries are largest in world. Herring and lobsters also important, and much attention given to propagation of lobster. Hair seal are hunted off Labrador coast, and whale hunting is carried on.

As to **minerals,** the island is rich in iron and copper ores, and has deposits of coal, silver, lead, gold, asbestos, and petroleum; also vast quarries of building stones, marble, and roofing slate. Large shipments of iron ore are made to smelters in Cape Breton.

Commerce is chiefly with the United States and Canada, leading exports being dried cod, pulp and paper, iron ore, cod oil, herring, seal skins and oil, and canned lobsters. Principal imports are flour, textiles, hardware, salt pork, coal, machinery, tea, and molasses. Imports, 1923, about $27,695,760; exports, $21,085,680.

Historical. Newfoundland was discovered by John Cabot, 1497. Settled in sixteenth century by rival English and French. Exclusive British sovereignty ceded by France (Treaty of Utrecht), 1713; confirmed 1763 and 1783. Certain fishing rights on west shore, retained by French, continued a source of dispute; but were largely extinguished by treaty, 1904, French still retaining right to fish along coast between Capes St. John and Ray. Fisheries dispute with United States settled by arbitration of Hague Tribunal, 1910, the award securing British right to regulation of the fisheries, subject only to treaty limitations, and confirming British contention that an entire bay between headlands is included in territorial waters.

Representative **government** granted 1832; responsible, established 1855. Created self-governing dominion in 1926. Executive powers vested in a Governor, with an Executive Council. Legislative affairs under control of the Legislative Council and elected House of Assembly. Capital, St. John's (36,444 in 1923), a fortified city with a fine landlocked harbor. Education is efficiently cared for by denominational colleges and public Board Schools.

LABRADOR

As the result of a decision handed down by the Privy Council at London during the early part of 1927, Newfoundland was granted territorial rights to the region known as Labrador. The extent of this acquisition was declared to be the Atlantic watershed of the continental peninsula east of Hudson Bay, including the valleys of the Hamilton and Northwest Rivers, an **area** of about 110,000 square miles. The **population** is estimated to be 3,874, of which about 1,200 are Eskimos.

Labrador was visited by Norsemen about 1000; by Cabot, 1497; by Cortereal, 1501; by Hudson, 1610. The coast was annexed to Newfoundland, 1763; to Quebec, 1774; and re-annexed to Newfoundland, 1809. No boundary settlement with Canada could be reached, however, before 1920 when a Commission was appointed to submit the dispute to London for a decision.

The **surface** of the large peninsula, of which Labrador forms a part, is rugged. Coast indented by deep inlets, with many good harbors, and thickly fringed with outlying islands. Interior is a tableland of about 2,000 feet general elevation, sloping gradually down to west, diversified by low hills (remnants of a former vast mountain system worn down by glacial action), and containing innumerable drainage basins discharging in all directions. Atlantic shore is precipitous, skirted by hills culminating near extreme north in unglaciated peaks 8,000 feet or more in elevation. **Forests** thickly cover the southern watershed and river valleys. Black spruce forms 90 per cent of growth; larch and pine also important; but timber and pulpwood thin out toward north, and tree limit is reached near Hudson Strait. The land as a whole is **agriculturally** irredeemable. **Mineral** wealth abounds, but is undeveloped. **Climate** is rigorous; country icebound October to May.

Fishing and hunting are the principal industries, the fishing fleet, mainly from Newfoundland, employing some 15,000 people each summer. Cod is the great catch, but herring, salmon, and trout also important. Fur animals include the marten, fox, mink, deer, wolf, and bear. The hair seal, of which nearly 34,000, valued at $159,925, were taken off the southern ice-floes in 1920, is hunted March 10 to April 30. It is valued chiefly for its skin and oil. The Eskimo dog is the only beast of burden, being used for sled travel in winter. An attempt is being made to supplant this animal with reindeer.

Most of the Indians have been converted to the Roman Catholic **religion;** and there are Moravian and other missions on the coast, besides several hospital stations and co-operative stores conducted by the Royal National Mission to Deep-Sea Fishermen.

NOVA SCOTIA

Area. The "Maritime Province" of Nova Scotia, the "Acadia" celebrated by Longfellow in his poem "Evangeline," has an area of 21,428 square miles, of which 360 square miles are water surface.

Population. In 1921 the population was 523,837, descended chiefly from French Acadians, English and Scotch immigrants, and American Loyalists. In 1911, population was 492,338.

Physical Features. The Province consists mainly of a peninsular extension southeast of New Brunswick, in the latitude of Southern Maine, and includes the island of Cape Breton, lying off the eastern end of the peninsula. The surface is diversified by lofty hills, broad valleys, and numerous lakes and rivers. The Cobequid Mountains in the north have a general elevation of 1,200 feet, and Mount Ingonish, reaching to 1,392 feet, is the highest peak in the Province. The principal river is the Annapolis, emptying into Annapolis Basin and the Bay of Fundy. The coast-line measures 1,200 miles. The shores in general are abrupt and irregular, with many inlets and fine harbors, especially in the southeast, and with deep water close to land. The Bay of Fundy, skirting the southern shores of New Brunswick and the northwestern coast of Nova Scotia, is noted as having at its head the highest tides in the world, with a range of 60 to 70 feet above low water.

Forests. Nova Scotia still contains great forest wealth capable of meeting demands for lumber far beyond its own domestic needs. The forested area, 1920, was estimated at about 5,000,000 acres, the principal trees being spruce, balsam, hemlock, pine, birch, oak, and maple. The available supply of spruce and balsam of pulpwood size is about 25,000,000 cords. In 1923 the total output of products from the forests of Nova Scotia was valued at $12,350,000

Climate. The Gulf Stream has a great modifying influence upon the climate of Nova Scotia, rendering it temperate and remarkably equable and healthful. Dense fogs are frequent on the Atlantic coast, due to the mingling of the cold, iceberg-laden Labrador current with the warmer waters of the Gulf Stream area. The port of Halifax is open to sea-going commerce the entire year. The mean annual temperature for the Province is about 43° (44.3° at Halifax); and the annual rainfall ranges from 30 inches at Digby, on the Bay of Fundy coast, to 57 inches at Halifax, on the Atlantic.

Agriculture. The western portion of the Province is very fertile. Around the Bay of Minas are extensive areas of salt marshes, producing large crops of salt hay and cultivated grasses. Mixed farming in general prevails. Hay is the most valuable crop; but root and grain crops are also important. The leading cereal is oats. In 1923, over 682,000 acres were under field crops, contributing nearly $21,000,000 to the wealth of the Province. The principal crops, in order of value, were: hay and clover, potatoes, turnips, mangels, and other roots, oats, wheat, beans, barley, buckwheat, mixed grains, fodder corn, peas, rye, and alfalfa.

Fruit culture is extensively practiced. Apples of excellent quality are produced in great quantities, the annual crop being about 1,000,000 barrels. Plums and cherries are also raised in large quantities, with some pears, grapes, and peaches. Strawberries, raspberries, and all small fruits grow to perfection, and cranberry culture is profitable.

Large areas are adapted to the rearing of sheep and cattle, and the live-stock and dairy interests have assumed large proportions. Of farm animals in 1923, cattle were the most numerous. Sheep and lambs, however, numbered almost as many, and the remainder were chiefly horses and swine. Creameries numbered 27, with an output of over 3,500,000 pounds of butter; and cheese and condensed milk factories are also important elements in the industrial equipment. There were in 1923 134 fur farms in Nova Scotia, with animals valued at $382,973.

Forests. Nova Scotia has 14,750 square miles of forests, about one-fourth of which is merchantable timber. Spruce, balsam, fir, birch, maple, beech and poplar are among the principal species.

Fisheries. In her fisheries Nova Scotia ranks second Province in the Dominion, next to British Columbia. The industry, which represented about $12,600,000 in invested capital in 1922, engaged that year about 3,000 vessels, and gave employment to 23,875 people; its products were valued at nearly $10,210,000. Cod, lobsters, mackerel, herring, and haddock are the principal catches taken.

Minerals. Coal is the leading mineral product of Nova Scotia. The coal area, all bituminous, covers about 1,125 square miles, and lies practically all on the seaboard, easy of access, its industrial value being thus greatly enhanced. The coal output just before the War was over 7,000,000 tons yearly, but fell off during the war period, and in 1923 was only 6,597,838 tons.

Gold has for many years been an important item of the mineral wealth of the Province. The gold fields cover an area of about 3,000 square miles, extending from Canso to Yarmouth. The greatest recorded production was in 1899, when the output was over 112,250 ounces. Operations in 1923 were much curtailed, owing to cost of material and labor, and the yield of the yellow metal for that year was small, only 655 ounces.

Iron ore is found in seventeen of the eighteen counties; yet nearly as much is imported from Newfoundland as is produced in the Province, to supply the mills of the big steel companies operating in Cape Breton.

Other leading minerals are: copper, barytes, silica, fire and brick clays, limestone, sandstone, antimony, lead, silver, manganese, tungsten, and diatomaceous earth.

The total mineral output of the Province, 1923, was valued at nearly $30,000,000.

Manufactures. The development of manufactures in Nova Scotia is favored by the abundance of raw material at hand, proximity of the coal fields, and ready access to shipping facilities. Lumbering holds very high rank among the industries, the cut in 1922 being nearly 101,451,000 feet, valued at nearly $2,510,000, and exported largely to the United States, the West Indies, and Europe.

At and around the city of Sydney in Cape Breton, which is located on a fine harbor near large coal mines, great blast furnaces and steel rolling mills have been established, using Nova Scotian ore and also importing many tons from the neighboring colony of Newfoundland.

Halifax, the capital city, had a population of 60,000 in 1927, and is the principal naval station in British North America. Sydney (population 22,545), at eastern end of Cape Breton, is a great iron and steel center and shipping port. Yarmouth (population 7,073), at the western end of the Province, is the chief shipbuilding town; and Glace Bay (population 17,007), a short distance north of Sydney, is the principal coal-mining center. All parts of Nova Scotia are well served by railroads and telephone lines.

Historical. Nova Scotia was visited by the English under John and Sebastian Cabot in 1497; but was first settled by the French at Port Royal (Annapolis) in 1604. The British claimed the region by right of discovery, but ceded it to France in 1667. In 1713 it was retroceded to Great Britain, and Halifax was founded by the British, in 1749. The Acadian (French) population was largely deported by the British in 1755, in the belief that the peasants had instigated Indian atrocities. Cape Breton and Prince Edward Island were annexed to Nova Scotia in 1763, but the latter separated in 1770. Cape Breton was separated in 1784, but was reannexed in 1819. Nova Scotia was granted responsible government in 1848, and was one of the original Provinces of the Dominion of Canada on its formation under the British North America Act of the Imperial Parliament, which went into effect July 1, 1867.

Government. The government of Nova Scotia is vested in a Lieutenant-Governor, assisted by a Legislative Council of 21 members appointed for life, and by a Legislative Assembly of 43 members popularly elected for a term of five years. The Province is represented in the Dominion Parliament by 10 Senators and 14 Members of the House of Commons. Public revenue in 1923 was a little over $5,317,000; expenditure, slightly less, being $5,208,210.

Educational matters are administered under a high standard. The public schools, both elementary and high, are free and non-sectarian, and attendance is compulsory. A very important feature of the educational system, fostering the great industrial interests of the Province, is the Provincial Technical College at Halifax, which has a series of 32 local mining and other technical schools affiliated with it and working under it in the chief industrial centers. There are four institutions of university rank. At Truro is the Provincial Agricultural College and a Normal School.

PRINCE EDWARD ISLAND

Area. Prince Edward Island is the smallest of the nine Provinces of the Dominion of Canada. It is four to thirty-five miles wide, with an extreme length of 150 miles, and has an area of 2,184 square miles. The island lies in the Gulf of St. Lawrence, off the coasts of New Brunswick and Nova Scotia, from which it is separated by Northumberland Strait. This Strait, at its narrowest part, between Cape Traverse on Prince Edward Island, and Cape Tormentine in New Brunswick, is only nine miles wide.

Population. Prince Edward Island is the most densely populated Canadian Province, having 40.5 inhabitants to the square mile. The total population by 1921 census was 88,615, a decrease of 5,113 under the census figures of 1911. The great majority of the people are native British North Americans.

Physical Features. The surface of Prince Edward Island is undulating, there being no hills of great height. The greatest elevation is that of N. Wiltshire, 311 feet. Owing to the small size of the island, there are no streams of any great length; but the country, nevertheless, may be said to be well watered. Topographically, the outstanding features are the deeply indented coast-line, and its bordering fringe of small islands, the latter being found especially along the north shore. These features afford numerous fine, well-protected harbors, and contribute to the volume and value of the fisheries.

Forests. An area estimated to be about one-third of the total surface of the Province is forest-covered, the principal trees being spruce, maple, pine, birch and beech. Little timber, however, is cut, and the forests play but a comparatively small part as a factor in the industry and commerce of the island.

Climate. The climate is considerably milder than that of the neighboring mainland, and is remarkably healthful. The rigors of the long winter are rather severe; but during the comparatively short summers, the heat is modified by sea breezes, giving the island a favorable reputation as a pleasure and health resort. There is less fog, and the climate accordingly is less humid, than in either Nova Scotia or New Brunswick. The mean annual temperature at Charlottetown is 42°, ranging from 18° in February, to 66° in July. The average yearly rainfall is 39.27 inches, which is ample for agricultural purposes.

Agriculture. Farming, the raising of high-class stock, and fishing are the main industrial pursuits in Prince Edward Island. Agriculture in its various branches is the principal occupation of the people. In this respect, the island may be said to be the most completely developed of all the Provinces of the Dominion, for almost the entire area is included in farms, and the majority of the inhabitants are farmers. In 1924, about 566,000 acres, or nearly two-fifths of the total acreage, was actually under field crops. The industry is favored by natural conditions of climate and soil, the latter consisting in general of a rich, red, sandy loam.

The total value of field crops in 1923 was over $10,000,000, the principal crops in order of value being: hay and clover, potatoes, oats, turnips, mangels, and other roots, wheat, mixed grains, barley, buckwheat, fodder corn, and peas.

The rearing of live stock is an important branch of agriculture, stimulated by the fine stretches of pasture land. Particular attention is given to the better breeds of horses and cattle. Of the farm animals on the island in 1923, which were valued at nearly $7,513,000, beef and dairy cattle were the most numerous, followed, in order by sheep, pigs, and horses. Dairying is an increasingly important development of the farming industry.

Success has followed the experiment of fox farming, which was started in 1887, and Prince Edward Island is the chief center in Canada for breeding of the silver or black fox. Development of this industry has been fostered by the formation of a Silver Fox Breeders' Association. In 1919, there were on the island 249 fox farms, on which were 5,149 silver foxes, and, the same year, 1,570 silver fox pelts were sold for $368,654, or at an average price of nearly $235 each. The fox farming experiment is being tried also in the United States, its possibilities being indicated to some extent by the prices paid for live silver foxes intended for breeding purposes, and for fox skins. Just before the War, in 1913, a pair of silver fox breeders brought $12,000 to $17,000; but in 1919 many were sold at $600 a pair. In 1920, nearly 1,000 live foxes of various kinds (silver, blue, white, red), were shipped to the United States at an average price of over $407 each. In 1923 there were 134 fur farms on the island, with animals valued at $382,973. It is estimated that sales of foxes and pelts the same year brought $2,000,000.

Fisheries. Favored by location in the Gulf of St. Lawrence and by the length of the coast-line and its many sheltered bays and inlets, the fisheries of Prince Edward Island are not only important but capable of great development. Lobsters and oysters are especially abundant in the surrounding waters. The former are largely taken in the vicinity of Charlottetown on the south coast, and Richmond Bay on the north shore is the home of the famous Malpeque oyster. Other principal catches are herring, cod, haddock, mackerel, and hake. The products of the fisheries in 1923 had a total value of nearly $1,755,000.

The mineral resources of the Province are unimportant.

Manufactures. Manufacturing industries in the island are comparatively small, though numbering about 350 establishments in 1923. These represented $2,935,829 in invested capital, gave employment to 1,119 wage-earners, and put out products valued at $4,405,037. Meat packing and lobster canning establishments, butter and cheese factories, boot and shoe factories, and shipbuilding plants stand high in the list, and there are important woolen mills, but many commodities needed by the people are imported from the neighboring provinces.

Charlottetown (population about 11,837 in 1927), capital and chief city, has important woolen mills and canneries. This city is sometimes referred to as the birthplace of Canadian Confederation, for here was held in 1864 one of the most important conferences that led to the formation of the Dominion in 1867. Summerside (population about 3,228) has a fine harbor and large export trade. Georgetown (pop. about 884) is a shipbuilding center. Borden, near Cape Traverse, is the landing place of the Government ferry that maintains railway connection between the island and Cape Tormentine in New Brunswick. The Canadian National Railways, with about 280 miles in operation, traverse almost the entire length of the island, with branches reaching all important towns. Public schools in the Province are free and non-sectarian.

Government. Government is vested in a Lieutenant-Governor, assisted by a Legislative Assembly popularly elected for a four-year term. The Province is represented in the Dominion Parliament by four Senators and four Members of the House of Commons. Public revenue, 1923, was $601,599; expenditure, $785,628.

Historical. The island, at first named Isle St. Jean, was visited by Cartier in 1534, and the French were the earliest settlers. The colony became a British possession 1758. Separate government was established 1768. In 1798, the name was changed to Prince Edward Island, in honor of the Duke of Kent, and the colony was admitted into the Dominion as a Province in 1873.

NEW BRUNSWICK

Area. The total area of the Province of New Brunswick is 27,985 square miles. Of this area, 27,911 square miles are land surface; while 74 square miles are water surface — excluding, of course, the territorial waters along the coast within the international limit of three marine miles from shore. The Province is about 200 miles long from north to south, and about 160 miles wide.

Population. The population of the Province, as enumerated in 1921, was 387,876, thus having a density of 13.8 inhabitants to each square mile of land surface. These figures show a gain of 35,950 inhabitants (10.2 per cent) since the census of 1911 was taken, when the total population was 351,889. Very few of the people are foreign-born, fully nine-tenths being natives of British North America, and the great majority live in what is classed as rural territory.

Physical Features. In general, the surface of New Brunswick may be described as an undulating plateau of slight elevation. The dominant feature diversifying the surface consists of two systems of hills of moderate elevation, running in a general direction northeast and southwest, and culminating in Bald Mountain (2,604 feet elevation), the highest point in the Province. These hills are northeastern outliers of the great Appalachian System. From the southwest corner of the Province, extend the two chains of eroded mountains, diverging widely toward the north, and forming in part the boundary between New Brunswick and Quebec. The southern range, rocky and with an elevation not exceeding 1,050 feet, fronts on the Bay of Fundy, and preserves the Southern coast from marine waste. Between the two ranges is a level, fan-shaped area overlying extensive coal fields. In the northwest is a rolling region of Silurian formation.

The great river of New Brunswick is the St. John, which, rising in Maine, drains not only the northeastern part of that State, but also about 9,000,000 acres, or half the area, of the Province. For 65 miles of its course along the Quebec boundary, or down to Grand Falls, the river is navigable for small steamers in the high water of spring and early summer. Boats can also descend from Grand Falls to Fredericton, 126 miles farther down stream. Below Fredericton, the river widens and deepens, becoming a waterway for larger vessels to St. John, 86 miles still farther down. Here the river presents the curious phenomenon of a waterfall which periodically reverses its direction of flow. This is due to the great tides in the Bay of Fundy. At the head of the Bay, the tidal wave, compressed as it advances between the converging shores, rises between 60 and 70 feet, heights elsewhere unequaled. In St. John harbor, the tide rises about 25 feet. More water enters the V-shaped mouth of the river than can quickly pass through The Narrows; and the river rises till its level overtops the Falls of St. John, which now begin to flow north. At ebb tide, low water is reached in the V-shaped mouth before the tidal water in the broader river above The Narrows can be discharged, and again the difference in level restores the southward flow of the Falls. As the tide ebbs and flows twice in twenty-four hours, there are daily four periods of equilibrium, each lasting about fifteen minutes, when vessels can pass above or below the site of the Falls.

At Moncton, on the Petitcodiac River, which flows into Chignecto Bay at the head of the Bay of Fundy, the tide reaches the city in the form of a "bore" or wave about six feet high, attaining a level of about thirty feet above low water.

There are many lakes in the Province, but none large. A chain of these in the southwest is drained by the St. Croix River, which forms part of the western boundary, and which flows south into Passamaquoddy Bay. This bay is deep, shielded by the West Isles, and affords a large anchorage open the entire year, and the river is navigable for large vessels twenty-five miles from its mouth. There are other large bays and fine harbors along the 500-mile coast-line of the Province.

The Miramichi River, rising in hills near the western boundary, flows in a generally northeastern direction into the Gulf of St. Lawrence, draining an area of about 6,000 square miles in the heart of the Province. It is navigable for 35 miles from its mouth in Miramichi Bay.

Forests. Large areas in northern and northwestern New Brunswick are still thickly forest clad, constituting one of the leading sources of wealth. In 1920, the commercial timber area was estimated at about 9,000,000 acres, the Crown forests covering over 11,300 square miles. Spruce is the principal wood, and other important trees are cedar, balsam, tamarack, maple, beech, birch, ash, basswood, poplar, ironwood, black willow, and butternut. The estimated available supply of spruce and balsam for pulpwood, 1920, was 26 million cords. The lumber cut, 1922, was nearly 360,050,000 feet. The interior system of waterways is so interlocked that cut logs are driven by water in all sections.

Climate. In common with the other Maritime Provinces, New Brunswick suffers more from extremes than does the Pacific seaboard, but far less than do the interior Provinces. Central New Brunswick has a continental climate, like that of Quebec. The rest, however, lies open to the tempering influence of the sea. The Labrador current and its iceberg fleet, off the Atlantic coast, are responsible for the late springs and temperate summers, and the mere proximity of the ocean, for the moderate winters. Dense fogs are frequent. The mean annual temperature ranges from 36.9° at Dalhousie, to 43° on Grand Manan Island, being 41.2° at St. John, with 18.5° for January. At St. John the extreme range is from about 12° below zero to 87° above. The average annual rainfall is 28 to 48 inches (48 inches at St. John).

Agriculture. Although a large part of the Province is wooded, farming is a very important industry. In 1923, over 909,000 acres were under field crops, harvesting a value of over $20,864,000. More than half the total value was made up by hay and clover. Potatoes were worth over $6,110,000. Other crops, in order of value, were: oats, buckwheat, turnips, mangels, and other roots, wheat, fodder corn, barley, beans, mixed grains, peas, alfalfa, and rye.

Apples are grown in large quantities, and plums do fairly well. Strawberries are profitably cultivated, and wild raspberries, strawberries, cranberries, and blueberries grow in profusion, the last named being largely canned for export.

Rearing of live stock is favored by natural facilities, and is extensively followed; yet the local supply of meat is never equal to the demand, and much is brought in from Ontario and Western Canada. Beef and dairy cattle are most numerous, but there are very large flocks of sheep, besides horses and swine. The total number of farm animals in 1923 was 487,481. Fox farms, 1919, numbered twenty, with 458 silver foxes. One hundred pelts were sold at a rate of nearly $230 each. Dairy interests show increasing activity. Good pasture and freedom from flies are favorable factors. Farm dairy products worth $1,099,474 were marketed in 1923, butter and cheese from factories and creameries being worth $618,054.

Fisheries. New Brunswick ranks next to Nova Scotia and British Columbia in the extent and value of its fisheries. Oysters and lobsters of excellent quality are taken in great quantities, other catches being herring, salmon, cod, haddock, smelts, and sardines. About $4,657,000 is invested in the industry, and 12,000 men are engaged in fishing.

Minerals. The mineral wealth of the Province is varied, bituminous coal being especially valuable. The Grand Lake coal fields cover about 112 square miles, and have reserves of about 155,000,000 tons. Petroleum and natural gas are produced near Moncton in the southeast; and gypsum is extensively quarried in Albert County. Other minerals are: antimony, manganese, iron ore, copper, granite, sandstone, limestone, pyrites, plumbago, silver, and gold.

Manufactures. Industrial development is favored by proximity of coal supplies and markets, and by excellent transportation facilities. Timber and lumber products are the leading output. Salmon, lobster, and oyster canning are of great importance. Textile and paper mills and iron works have been established. Cheese factories, 1923, numbered 20; creameries, 12.

Official figures show that in 1922 the number of manufacturing establishments in the Province was 855. These establishments represented an invested capital of $81,789,934, gave employment daily to an average of 14,199 wage-earners; paid out in wages and salaries $12,080,840; and consumed raw materials which cost $38,058,622. Their combined output of finished products had an estimated value of $64,614,137.

St. John (population 60,300) is the chief seaport and industrial center, and much the largest city. It is the oldest incorporated city in the Dominion, and was the first to adopt government by a Commission. Fredericton (9,000), is the capital, and seat of the University of New Brunswick. Moncton (17,488) has industries supplied with natural gas.

Government. Government is vested in a Lieutenant-Governor, assisted by a Legislative Assembly of forty-eight members popularly elected for a five-year term. The Province sends ten Senators and eleven Members of the House of Commons to the Dominion Parliament. Public revenue, 1922, was nearly $3,118,000; expenditure, nearly $3,047,000.

Historical. New Brunswick was settled by the French in 1639; and formed part of Acadia or New France until ceded to Great Britain in 1713. Many settlers emigrated to the colony from Scotland in 1764; and there was a great influx of United Empire Loyalists from the United States in 1783. New Brunswick was made a separate colony in 1784, and became one of the original Provinces of the Dominion of Canada on its formation, July 1, 1867.

QUEBEC

Area. It is only since 1912 that the boundaries of the Province of Quebec toward the north and west have been accurately defined. Quebec is the largest of the Canadian Provinces. The total area is now 706,834 square miles, of which 690,865 square miles are land surface, and 15,969 square miles (exclusive of the Gulf of St. Lawrence) are water surface. Less than 4 per cent of the land area is occupied.

Population. The enumerated population of the Province of Quebec in 1921 was 2,361,199, having a density of 3.42 inhabitants to the square mile. At the census of 1911, the population was 2,005,776. Over three-fourths of the people are of French descent, retaining their ancestral language and customs, and the great majority are of Roman Catholic religion.

Climate. The climate of Quebec is variable, with great seasonal changes in temperature. The winters are long, and the cold intense, its severity, however, being greatly modified by the dry, bracing atmosphere. Snowfall is heavy, averaging about 124 inches annually. The summers are warm and pleasant. The mean annual temperature ranges from 33.6° at Abitibi, to 43.8° at Danville, being 41.8° at Montreal, 13.4° in January and 69.8° in July. Rainfall ranges from 27 inches at Abitibi, and 29 inches on the island of Anticosti, to 45 inches at Cranbourne, and 48 inches on the Magdalen Islands, averaging 40 inches at Montreal.

Physical Features. The surface of the Province is greatly diversified, comprising the uplands of the Laurentian Plateau in the north, and, in the southern part, the great basin of the St. Lawrence River merging into undulating hills and valleys similar to those that mark the topography of the Maritime Provinces.

The St. Lawrence River traverses the country from southwest to northeast, between two principal mountain ranges — on the north, the great Laurentian System (average height, 1,600 feet); and on the south, the Shickshock or Notre Dame Mountains, an extension of the Appalachian System, culminating in Mount Logan in Matane County (3,708 feet), the highest point in the Province.

Besides the St. Lawrence, there is a magnificent system of waterways affording forest, lake, and river scenery unrivaled in variety, grandeur, and picturesqueness. Some of this is found in the Laurentides National Park, not far from the city of Quebec. The streams of the Province, at ordinary minimum flow, have a total potential power capacity estimated at 6,915,000 horsepower, of which in 1920 over 925,970 horsepower had been developed. The dam at LaLoutre, on the St. Maurice River, gives a reservoir of 160 billion cubic feet capacity, second only to the 183 billion feet capacity of Gatun Lake on the Panama Canal.

Forests. Quebec has about 130,000,000 acres of standing commercial timber—one of its most valuable resources, and lumber interests are of vast importance. Pine, spruce, balsam, cedar, tamarack, hemlock, ash, birch, walnut, maple, and many other valuable trees are abundant. Spruce is largely cut for pulpwood; 1,088,205 tons of pulp, besides 587,777 tons of paper and paper products, were produced by the 48 mills operating in 1922. The output, valued at $89,195,768, was sold chiefly to the United States.

Agriculture. Farming interests in the Province are growing apace. In the north and northeast, the soil is poor and thin, but in the southeast, it is good. About 6,650,000 acres were cultivated in 1923, producing field crops valued at over $133,137,000. Nearly half this value was in hay and clover, the other principal crops, according to value, being: oats (leading cereal), potatoes, turnips, mangels, and other roots, spring wheat, fodder corn, barley, tobacco (of which 10,500,000 pounds, valued at $1,575,000, was raised on 15,302 acres); buckwheat, mixed grains, peas, beans, corn, alfalfa, rye, and flaxseed. Apples, plums, melons, and small fruits, as usual, were largely produced, and other products were over 8,876,000 pounds of maple sugar, and nearly 1,178,000 gallons of maple sirup.

Quebec ranks high in dairy products, chiefly butter and cheese. Excellent pasturage is found in the Eastern Townships and north of the St. Lawrence, and cattle are reared in large numbers for export to English markets and for the dairy. In 1923, there were 732 creameries, 616 cheese factories, and 323 combined creameries and cheese factories, which put out nearly 60 million pounds of butter and over 46 million pounds of cheese.

Fisheries. These are extensive in the Gulf and off Gaspé Peninsula and the Magdalen Islands, the chief catches being cod, herring, salmon, lobsters, and mackerel.

Minerals. Quebec is rich in minerals, of which her output in 1923 was valued at over $20,000,000. The greatest asbestos mines in the world are in Megantic, Arthabaska, Beauce, Brome, Ottawa, Richmond, and Wolfe counties, the product in 1923 being nearly 231,500 tons. Gold is found in the Beauce district; copper in the Eastern Townships; iron ore near Hull and in Coleraine; petroleum in Gaspé; phosphate rock in the Ottawa Valley; mica in the Saguenay, Ottawa, and Pontiac districts. Other minerals produced are magnesite, chromite, silver, zinc and lead ore, feldspar, kaolin, building stones, marble, slate, lime, graphite, cement, etc.

Manufactures. Quebec is second only to Ontario in the value of its manufactures. In 1923 there were 7,142 industries in the Province, employing 147,952 people at wages and salaries amounting to $164,356,082. The industries were capitalized at $1,009,898,982, and turned out products valued at $811,103,396.

Pulp and paper products from 48 mills, and amounting to $88,894,897, led the industries. Cotton manufactures in 16 establishments produced over $57,000,000 worth of goods. Next to these in value came railway rolling stock, tobacco, cigars, and cigarettes, butter and cheese, leather boots and shoes, lumber, electric light and power, and flour and grist.

Montreal, with a population of 1,032,385, is the chief commercial city in Canada. It stands on the island just below the confluence of the Ottawa with the St. Lawrence River, at the head of ocean navigation. In 1923 there were 1,451 manufacturing establishments in the city, employing 85,603 people and producing products valued at $459,254,656. In 1922, 1,829 sea-going ships of 6,646,781 tons entered the port. In 1923, exports from Montreal were valued at $190,282,000 and taxable imports at $191,867,000. Exports were largely grain, flour, hay, and cheese. In Montreal is located McGill University, Protestant, and University of Montreal, Catholic.

Quebec (population 133,000), rich in historical associations, is strongly fortified and an important seaport. Seven miles above the city, the St. Lawrence River is crossed by the greatest railway bridge in the world; total length 3,240 feet; main span, 1,800 feet; clear height above high water, 150 feet.

Historical. The territory was discovered by Sebastian Cabot in 1497, but it was not until 1535-41 that important explorations were made and the earliest settlements established by the French under Cartier. Explorations were made in 1603, by Champlain, who founded the first permanent settlement at Quebec in 1608. The fortress was captured by the English under Wolfe in 1759, this practically signaling the end of the French régime in North America. The French rights over all Canada, including the present Province of Ontario, were ceded to the English in 1763. The territory was organized as the Province of Quebec, 1774, but was divided in 1791 into Upper and Lower Canada. These were reunited as the United Provinces of Canada in 1841. On the formation of the Dominion, July 1, 1867, Ontario and Quebec were admitted into the Confederation as original and separate Provinces. The region formerly included in the Northwest Territories under the name Provisional District of Ungava, lying east of Hudson Bay and having an area of 351,780 square miles, was added to Quebec in 1912.

Government is vested in a Lieutenant-Governor, assisted by a responsible Ministry, a Legislative Council of 24 members appointed for life, and a Legislative Assembly of 86 members popularly elected for a 5-year term. The Province sends 24 Senators and 65 Members of the House of Commons to the Dominion Parliament. Public revenue, 1923, $23,170,733; expenditure, $21,867,293.

Anticosti. Included in the Province of Quebec is the island of Anticosti (140 miles long, 30 wide; area, 2,600 square miles), now a game preserve, the private property of a wealthy French manufacturer. It lies in the Gulf of St. Lawrence, separating the north and south channels. Population, 1911, 461; 1921, 451.

ONTARIO

Area. Ontario is the second largest Canadian Province, having a total area of 407,262 square miles, of which 365,880 are land surface. The water area, including territorial waters in the Great Lakes, is 41,382 square miles.

Population. The population, Census of 1921, was 2,933,662 (density 7.2 per square mile), making Ontario the most populous of the nine Provinces. The increase since the census of 1911 was 406,370, or 16.08 per cent. About 20 per cent of the people are Roman Catholics; Indians number about 23,000.

Climate. The climate is healthful and bracing, and, on the whole, pleasant. Winters toward the north are severe, the thermometer sometimes dropping to around 50 degrees below zero, but extremes are modified by dryness of the atmosphere, and, in the southeast, by proximity to the Great Lakes. The mean annual temperature ranges from 31° at Moose Factory on James Bay, to 48° at Chatham, and 49° on Pelee Island in Lake Erie. At Haileybury it is 37°; at Ottawa, 42.2°; at Toronto, 44.4°. Rainfall at Ottawa is 33 inches; at Toronto, 34 inches; at Windsor, 29 inches.

Physical Features. The Laurentian Plateau crosses Ontario from east to west, forming the divide between the Hudson Bay and St. Lawrence basins. The surface of the Province in general is undulating, rising in the north, on the plateau, to a general elevation of about 1,200 feet above sea-level, and is greatly diversified by hills, rivers, and lakes. South of Georgian Bay, the Blue Mountains reach an altitude of 1,900 feet, but the highest point in the Province is Tip Top Hill, 2,120 feet, in Thunder Bay District, north of Lake Superior.

The southern portion is drained by the St. Lawrence and Ottawa rivers, the latter forming 400 miles of the northeastern boundary. The water-front along the Great Lakes and connecting waters, extends about 3,000 miles, containing many good harbors. The total power capacity of the Ontario streams, at ordinary minimum flow, is about 5,800,000 horsepower (including 2,045,000 horsepower in the Niagara and St. Lawrence rivers), of which, in 1920, 1,015,726 horsepower had been developed.

Forests. Northern Ontario is richly forest-clad. The forest land of the Province covers about 240,000 square miles, including about 100,000 square miles in Patricia. About 30,000,000 acres south of the Laurentian Plateau have been largely cleared for agriculture. The Plateau itself has about 50,000 acres of forest. In this region, north of Lake Nipissing, the trees are chiefly white and red pine and hemlock; to the south and west is a belt of maple, beech, oak, elm, basswood, poplar, birch, and black ash. The northerly part of the Plateau has a stand of 15 to 20 million feet of pine, birch, white spruce, cedar, larch, poplar, and balsam. On the Hudson Bay slope, the forests are chiefly spruce, poplar, larch, and hemlock, containing about 200,000,000 cords of pulpwood. The commercial timber area, 1920, was about 70,000,000 acres. Large pulp mills have been established at Sault Ste. Marie and in the Ottawa Valley. The lumber cut, 1922, was 776,280,000 feet; value, $25,687,380.

Fisheries. The Great Lakes and the waters of Rainy River District are the chief sources of fish supply—whitefish, trout, herring, bass, pickerel, pike, carp, and sturgeon. The total catch, 1923, was valued at $3,159,427.

Agriculture. Farming in its various branches is the leading industry. Over 10,290,000 acres were under field crops in 1923, the crops being valued at nearly $220,749,000. In order of value, the principal crops were: hay and clover, oats, wheat (chiefly winter), fodder corn, potatoes, mixed grains, turnips, mangels, and other roots, barley, corn, alfalfa, tobacco, sugar beets (Ontario only Province producing), peas, buckwheat, rye, beans, and flaxseed.

Fruit-farming is successfully pursued in the southeast. The Province is noted for superior apples, producing about 25 per cent of the Dominion crop of this fruit. Apples are grown largely in all the Lake counties. The peaches of the Niagara Peninsula rank with the best in the world. The peach crop is annually about 2,000,000 baskets of 11 quarts. Plums made over 300,000 baskets. About 99 per cent of all Canadian grapes are grown around the western end of Lake Ontario.

Live stock on farms, 1923, was valued at over $211,326,000, and about $65,000,000 worth of dairy products are put out annually. The first cheese factory was erected in 1864; in 1918, there were 751, producing nearly 100,000,000 pounds of cheese, over half the total for the Dominion. In the same year, nearly 55.000,000 pounds of butter were made in the 211 creameries.

Minerals. The minerals of Ontario are varied and widely distributed, the total output in 1923 being worth over $80,060,000. The Lake Superior region is rich in iron ore, and here both American and Ontario ores are smelted. The most important gold regions are those of the Rainy River District. Silver also is found around Lake Superior, but the richest silver region is the Cobalt area, discovered in 1903, the ores here often carrying up to 3,000 to 4,000 ounces of silver to the ton, besides cobalt, nickel, and arsenic. From the Cobalt district, 1904–24, shipments of silver totaled 354,337,693 ounces, $219,714,052; and here, too, is the world's chief source of supply of cobalt. The richest petroleum and natural gas districts are Oil Springs, Petrolia, Tilbury East, and Bothwell. The nickel-copper ores of the Sudbury district west of Lake Nipissing are the richest nickel deposits in the world, the only other known deposits of great commercial importance being those of the French island colony of New Caledonia, at the antipodes. The Sudbury mines produce about 90 per cent of the world's supply of nickel, the same ores also producing much copper and considerable platinum and palladium. The greatest mica mine on the continent is near Sydenham. Other important minerals produced are: corundum, salt, asbestos, clays, cement, sand, building stone, barytes, feldspar, fluorspar, gypsum, graphite, sulphur ore (iron pyrites), lead, and talc.

Manufactures. Abundant water-power affords unusual industrial facilities, and Ontario is the leading manufacturing Province of Canada. The principal centers are Toronto, Hamilton, Ottawa, London, Guelph, Kingston, Kitchener, Brantford; and the leading industries are: lumber and mill products, flour, clothing, slaughtering, dairy and foundry products, textiles, smelting, farm implements, leather. There are beet-sugar refineries at Chatham, Wallaceburg, and Kitchener.

Toronto (population estimated in 1927 at 569,899), on Lake Ontario, is capital of the Province, and its commercial and educational metropolis. It has a fine harbor protected by a long, narrow island; and is the seat of Toronto University, which stands at the head of the Provincial Educational system. Hamilton (population 125,000) at the western end of Lake Ontario, is a prosperous manufacturing city known as the "Canadian Birmingham." Ottawa (population 117,999), beautifully situated on the south bank of the Ottawa River, is capital of the Dominion, and has large industrial interests connected chiefly with the lumber trade. Other important cities are London (population 60,959); Brantford (29,440); Kingston(21,753), seat of the Royal Military College; Guelph (18,128), seat of the Ontario Agricultural College.

Government. Government is vested in a Lieutenant-Governor, assisted by a responsible Ministry, and by a Legislative Assembly of 111 members popularly elected for a 4-year term and holding sessions annually. The Province is represented in the Dominion Parliament by 24 Senators and 82 Members of the House of Commons. Public revenue, 1923, was about $34,100,000; expenditure, $49,305,439. The school system is under control of the Minister of Education, the law providing separate schools for Roman Catholics.

Historical. The region around Lakes Ontario and Nipissing was visited by Champlain, 1615; and fur traders were active around Lake Superior, 1660. The Lake Huron district was claimed by Perrot for France, 1671. Niagara was founded by La Salle, 1679; and Toronto was founded 1749.

Ontario originally formed part of the Province of Quebec, but became the separate Province of Upper Canada in 1791. In 1841, it was reunited with Quebec; but was again separated, and entered the new Dominion as one of the original Provinces, July 1, 1867. In 1912, the boundaries of Ontario were considerably extended northward by addition of what is now known as the District of Patricia, comprising an area of 146,000 square miles, part of the former District of Keewatin in the Northwest Territories, extending westward to the Manitoba border from the west shore of James (Hudson) Bay north of the Albany River.

MANITOBA

Area. Manitoba, the first Canadian Province to be carved out of the Northwest Territories, has a total area of 251,832 square miles, of which 231,926 square miles are land surface, and 19,906 water.

Since 1912, it has included a considerable part of the former District of Keewatin, of the Northwest Territories. The transfer of this new territory to Manitoba extended the boundaries of the Province northeastward to the shores of Hudson Bay. The addition comprised an area of 178,100 square miles, stretching north from near the mouth of the Severn River on the west shore of Hudson Bay, to the parallel of 60° N. latitude, and westward to the Saskatchewan border.

Population. In population, Manitoba has had a remarkably rapid growth, increasing from 25,228 in 1871, to 255,211 in 1901, to 461,394 in 1911, and to 610,118 in 1921, giving a density of 2.6 inhabitants to the square mile.

Climate. The climate is marked by great extremes of both heat and cold, but these are modified in their effect by the dryness of the atmosphere. Humid heat and raw cold are alike unknown. There are usually five months in the year when the thermometer falls below zero, and during this period there is no rain or thaw, the snow being as dry as sand under foot. The country in summer is subject to occasional thunder and hail storms, and it is liable to early frosts. At Winnipeg, which has an elevation of 740 feet above sea-level, the mean annual temperature is 34.8°, ranging from 3.5° below zero in January, to 66.2° above in July. The average annual rainfall ranges from 14 inches at Sourisford, and 15 inches at Brandon, to 20.24 inches at Winnipeg; and 74 per cent of the precipitation falls between April 1 and September 30. The dry fall weather cures the standing grass, on which ranging cattle feed all winter. Snowfall for the Province averages 62 inches, but is only 49.16 inches at Winnipeg, where spring opens earlier than in Montreal, over four degrees of latitude farther south. Seeding usually begins in April, before the frost is fully out of the ground.

Physical Features. The surface in general consists of a series of successive levels known as "steppes" or benches, the lowest lying near the great rivers and sometimes subject to overflow. The lands are chiefly prairie. The great, lake-dotted plain of central and southern Manitoba, part of the great wheat belt stretching across to the foothills of the Rockies, has a soil consisting of clay and silt overlaid by several feet of black vegetable mold, and owes its wonderful fertility to the fact that it is the bed of an ancient glacial lake (Lake Agassiz), which, in the Quaternary period, covered an area of 110,000 square miles and included the basins of the Red River and the Lake of the Woods, Lakes Winnipeg, Manitoba, Winnipegosis, and Dauphin, and many smaller lakes.

In the Laurentian districts of the north and east, the surface is broken and hilly, but abundantly watered, and with good timber and occasional broad, fertile tracts. The highest elevation in the Province is in the Porcupine Mountains (2,500 feet), on the west-central border. The principal rivers are the Red River of the North, coming up from the United States, and the Assiniboine. Farther north are the Saskatchewan (navigable almost to the Rockies), the Nelson, and the Churchill, with vast power possibilities. It is estimated that the water-power capable of being developed from the streams of Manitoba at ordinary minimum flow is 3,250,000 horsepower. Of this total, 162,025 horsepower had been harnessed in 1926.

Forests. Commercial timber lands in Manitoba (which are under Dominion control) cover an area of about 1,920,000 acres, with an available saw-timber stand estimated in 1920 at about 6¾ billion feet, chiefly spruce. The lumber cut in 1925 was over 54,000,000 feet. In the hill districts west of the Red River, in the southern part of the Province, over 2,000,000 acres have been set aside in forest reserves. The trees, in order of importance, are: white and black spruce, jack pine, tamarack, balsam, white poplar, cedar, burr oak, white (paper) birch, white elm, green ash, white oak, black poplar (Balm of Gilead), black ash, basswood, Manitoba maple, cottonwood, red ash, and mountain maple.

Agriculture. The area capable of cultivation is estimated at 25,000,000 acres, or 16.8 per cent of the total land area of the Province, and farming, in its various branches, is the chief occupation of the people. Over 6 million acres were under field crops in 1922, the crops having a total value of over $98,000,000. Over 60,000,000 bushels of spring wheat were harvested, and over 74,433,000 bushels of oats. Other principal crops in order of value were: barley, hay and clover, potatoes, rye, flaxseed, fodder corn, mixed grains, turnips, mangels, and other roots, alfalfa, and peas.

With proper drainage and winter protection, hardy varieties of standard apples are successfully grown at the foot of the Pembina Mountains and in Red River valley. Other cultivated fruits are raspberries, strawberries, gooseberries, currants, and crab apples; and indigenous fruits are plums, cherries, raspberries, black currants, blueberries, strawberries, and grapes. Excellent cranberries grow in the marshy districts,

The country affords excellent natural advantages for the stock grower. In Red River valley and elsewhere are large areas of fine pasture lands, abundantly watered. Beef and dairy cattle are the principal live stock, and export of beef cattle is an important item of trade. Horses rank next in importance, and hogs and sheep also command attention. Poultry raising is profitable in all farming districts. Much attention is paid to the breeding of pure stock. Dairy products, 1924, were valued at nearly $13,100,000, including over 12,000,000 pounds of butter and over 500,000 pounds of cheese.

Fisheries have an annual production valued at over $1,000,000; and fishing is carried on in winter, through the ice.

Minerals. The mineral resources of Manitoba are of comparatively minor importance. The mineral output, 1923, was a little under $1,800,000, including about 380,000 tons of gypsum mined in the northern part of the Province. Gold and silver are recovered chiefly as by-products in copper refining.

Manufactures. Manufacturing industries in Manitoba are rapidly developing with increasing population and improved business facilities. Flour and grist milling and slaughtering and meat-packing take the lead.

Winnipeg (population, excluding suburbs, 202,377 in 1928), capital and metropolis of the Province, is the largest grain market in the world, and is the commercial and educational center of Manitoba and the Canadian Northwest, being sometimes called the "Half-Way House" of Canada. It is the fourth manufacturing center, the third retail center, and has the largest stockyards in the Dominion, marketing almost 212,265 head of cattle in 1921. The water supply of Winnipeg is taken from Shoal Lake, Ontario, 95 miles distant, through an aqueduct of 100,000,000-gallon daily capacity, completed in 1919 at a cost of over $16.000,000.

Brandon (population 15,397) and Portage la Prairie (population 6,766) are important railroad centers and grain markets.

The Province has about 4,600 miles of railway in operation, and a line is being built to Port Nelson on Hudson Bay. The Hudson Bay route to Europe, open from about July 15 to about October 15, will save 970 miles of distance from the Western wheat fields to the Atlantic seaboard.

Government. Government is administered by a Lieutenant-Governor, assisted by a responsible Cabinet, and by a Legislative Assembly of 55 members popularly elected for a five-year term. The Province sends 6 Senators and 17 Members of the House of Commons to the Dominion Parliament. Public revenue, 1924, was about $10,603,000; expenditure, about $10,476,000. All public schools are free and non-sectarian.

Historical. The earliest explorations were made by the French, a fort being built at the mouth of the Assiniboine by Verendrye in 1731. English Traders came in 1767, and various rival companies were formed. These were later united in the Northwest Company, and finally absorbed by the Hudson's Bay Company. The lands along the Assiniboine and Red rivers were purchased from the Hudson's Bay Company by Lord Selkirk in 1811; but the colony, variously known as the "Red River Settlement" and "Assiniboia," founded in 1812, was repurchased by the Hudson's Bay Company, 1836, and was transferred by sale to the Imperial Government in 1869, with other parts of the Northwestern Territory. In 1870, it was separated from the Northwest Territories, and admitted as a Province into the Dominion. Half-breed rebellions, led by Louis Riel, broke out in 1869 and 1885, but were quickly suppressed.

SASKATCHEWAN

Area. The area of the Canadian Province of Saskatchewan is 251,700 square miles, or almost 40,000 square miles larger than the area of France. Of this total, 243,381 square miles are land surface, and 8,329 square miles water surface.

Population. The population has increased with great rapidity, being augmented by a large influx of immigrants from the other Canadian Provinces, from Europe, and, in more recent years, from the United States, who have settled on the rich farming lands.

In 1901, the inhabitants numbered only 91,279. By 1911, the population was shown by the Census to have increased to 492,432—an increase in ten years of about 440 per cent. In 1921, the number of inhabitants was estimated at 757,510, giving a density of about 3.12 to the square mile—an increase, in ten years, of nearly 54 per cent.

Immigration has been greatly aided by the extension of railroad facilities, and by the liberal policy of the Government in throwing open large areas of rich farming land to bona fide settlers. During the fiscal year ended March 31, 1920, Saskatchewan received 14,287 foreign settlers, of whom 8,023 came from the United States.

Indians and half-breeds in the Province number about 15,000, the Indians being kept on government reservations. The reservations are largely self-supporting.

Presbyterians and Roman Catholics are of about equal numerical strength in the Province, each forming roughly about one-fifth of the total number of inhabitants, followed in smaller numbers by Methodists, Anglicans, and Baptists. There are small colonies of Russian Mennonites and Doukhobors. The latter are a peculiar communistic sect holding land in common, and opposed to form in religion and to marriage. Their emigration from Russia was promoted by the late Count Tolstoi.

Physical Features. Saskatchewan occupies a part of the great Interior Plain that stretches northward to the Arctic Ocean between the Laurentian uplands on the east and the Rocky Mountains on the west. It is practically all drained into Hudson Bay through the Saskatchewan and Churchill rivers. The surface as a whole is undulating, diversified by hills of moderate elevation ranging generally east and west, and, toward the north, by numerous lakes and connecting streams. The highest altitude is that of "The Nose," in the Neutral Hills, 2,995 feet. The Saskatchewan River, which, with its north and south branches, affords a navigable waterway far across Alberta, drains the southern half of the Province, on its way to Lake Winnipeg. Farther north, the Churchill River drains a chain of many lakes, flowing across northern Manitoba into Hudson Bay. In the extreme north is Lake Athabaska, with its many feeders, whose waters ultimately reach the Arctic Ocean by way of Great Slave River and Lake and the long course of the Mackenzie River.

The potential power development of the streams of Saskatchewan at ordinary minimum flow, is estimated at 567,000 horsepower.

Forests. The forests of the Province consist chiefly of spruce and poplar, with some jack pine, tamarack, balsam, and willow. They cover a total area estimated in 1919 at about 73,000,000 acres, or over 46 per cent of the total land area, the region north and east of Prince Albert being most heavily timbered. There are about 7,800,000,000 feet of standing saw-timber, and the available supply of pulpwood (spruce, balsam, and poplar) is about 55,000,000 cords, besides 150,000,000 cords of cordwood. The Crown forests are under Dominion Government control. Nearly 10,000,000 feet of lumber was cut on the reserves in 1922.

Climate. On the whole, the atmosphere is dry and clear, and precipitation comparatively light, while the temperature is fairly equable during winter. In the southern third of the Province, however, conditions, while moderate, are somewhat changeable. In the southwest, the influence of the warm chinook winds is felt, mitigating the severity of the winters considerably. This is shown by a comparison of observations made at Regina in the southeast and at Maple Creek in the southwest. The mean temperature in summer at Regina is 50°; at Maple Creek it is 62°. The mean winter temperature at Regina is 0° (zero); at Maple Creek, it is 15.3°.

The mean annual temperature at Moosomin, in the southeast corner, is 33.5°; at Regina, it is 33.2°; and at Battleford, farther west, although considerably farther north, it rises to 36.8°. In the far north, at Fond du Lac, on Lake Athabaska, it is 22.4°.

The average annual rainfall diminishes in the northern parts. At Regina. Saskatoon, and Moosejaw, it is 14 inches, 16 inches at Swift Current, and 17 inches at Prince Albert, but only 10 inches at Fond du Lac. In the southwest, the rains are more uncertain, and dry farming and irrigation are practiced to some extent.

Agriculture. The soil of Saskatchewan, in general, is a rich loam, 8 to 20 inches deep, over a brown clay subsoil. It is of inexhaustible fertility and retains moisture well. Only about one-ninth, however, of the vast agricultural lands of the Province has been brought under cultivation. The area under field crops in 1923 was a little over 19¾ million acres, and the crops were valued at $248,777,900. Grain production is carried on chiefly toward the south, and here mixed farming is also extensively followed. The northern prairies are more especially devoted to cattle-raising.

The soil and climate are exceptionally favorable to the growing of wheat, and Saskatchewan leads all the other Provinces in production of this cereal. In 1923, the Saskatchewan wheat crop (all spring wheat) was 252,662,000 bushels, valued at $164,204,000. This immense crop was grown on 12,791,000 acres, the yield being 19¾ bushels to the acre. The Province also leads in production of flaxseed, of which the 1923 crop was 5,493,800 bushels, or over 77 per cent of all produced in Canada. The other principal crops, 1920, in order of value, were: oats (218,075,000 bushels); potatoes, barley, hay and clover, rye, turnips, mangels, and other roots, fodder corn, mixed grains, alfalfa, peas, and beans.

Natural conditions are eminently suitable for the live-stock and dairy industries, and the former especially has developed rapidly to great proportions. Of farm animals in the Province, valued at $107,476,000 in 1923, beef and dairy cattle were the most numerous, numbering over 1,536,000. Horses ranked next, numbering nearly 1,138,000. Pigs and sheep are also raised in considerable numbers. The pure breeding of stock receives much attention. Dairy products to the value of over $19,357,000 were produced in 1924.

Minerals. Mineral resources play but a small part in contributing to the wealth of the Province. The principal mineral is lignite—a low-grade coal of little over half the heating value of American anthracite, and, in its natural form, friable, unable to stand long carriage, and more or less liable to spontaneous combustion. Briquettes made from lignite, however, by first carbonizing it and driving off the gases, and then compressing it in molds with sulphite or coal-tar pitch as a binder, have a heat value almost equal to that of anthracite. A government plant for manufacturing briquettes has been built at Estevan, Sask., the Provinces of Manitoba and Saskatchewan sharing with the Dominion in the expense of its construction.

The coal beds are widely distributed in the southern part, the chief center being at Estevan. There are two distinct formations. The lower is the Belly River, giving a poor-grade coal. The higher and better formation is in the Souris District, where there are over 50 mines in operation. About 438,000 tons were produced in 1923.

Manufactures. For raw materials, manufacturing industries are dependent chiefly on forest, pastoral, and agricultural products. They comprise lumber and woodworking mills, flour and grist mills, butter and cheese factories, slaughtering and meat-packing, etc.

Regina, the capital, had 45,000 inhabitants in 1927. Saskatoon (population 40,000 in 1927) is the seat of the University of Saskatchewan. Other important towns are: Moosejaw (population 19,285) and Prince Albert (population 7,558).

Government. Government is vested in a Lieutenant-Governor assisted by a responsible Cabinet and by a Legislature consisting of a single chamber of 63 members popularly elected for a five-year term. The Province is represented in the Dominion Parliament by 6 Senators and 21 Members of the House of Commons. Public revenue, 1923, was $12,576,762, expenditure, $12,886,544.

Historical. The territory now included in Saskatchewan was formerly part of the Northwest Territories, comprising the old District of Saskatchewan and parts of the Districts of Assiniboia and Athabaska. It was raised to the status of a Province of the Dominion, September 1, 1905. In 1885 the region was the scene of much of the fighting in the second half-breed rebellion led by Louis Riel.

ALBERTA

Area. The area of the Province of Alberta is 255,285 square miles, of which 252,925 square miles are land surface, and 2,360 water surface. It ranks fourth in size among the Canadian Provinces.

Population. In 1901 the number of inhabitants was only 73,022; but in 1911 it had increased to 374,295, the Census taken in that year showing an increase of over 413 per cent during the preceding decade. By the 1921 census the population was 588,454, with a density of 2.33 persons to the square mile—an increase of 57.1 per cent in ten years.

For many years there has been a fairly steady influx of home-seekers and farmers from abroad. These new comers have been attracted by the inexhaustible fertility of the soil, the favorable climate, and the liberal conditions offered in the granting of public lands by the Government to bona fide settlers. During the fiscal year ended March 31, 1920, foreign immigrants to the number of 20,000 entered Alberta, of whom 13,283 came from the United States.

Physical Features. An area comprising practically the eastern three-fourths of the Province is included in the great Interior Plain, which lies between the uplands of the Laurentian System on the east and the Rocky Mountains on the west, and which extends northward from the international boundary to the Arctic Ocean. Western Alberta, comprising about one-fourth of the Province, contains the foothills of the Rocky Mountains, and merges into the Cordilleran region. The highest peak in Alberta is Mount Columbia, which attains an altitude of about 14,000 feet. The Grey Bear Mountains lie in the east-central part, on the Saskatchewan border, and in the far northeast, the Cariboo or Reindeer Mountains run in a south-westerly direction over half-way across the Province, with outlying spurs to the south.

The great rivers of Southern Alberta are the North Saskatchewan and South Saskatchewan (both branches of the same stream), which rise on the eastern slopes of the Rockies, have their confluence below Prince Albert in the Province of Saskatchewan, and thence flow east as a single stream partly across Manitoba, emptying into an arm of Lake Winnipeg.

Northern Alberta is drained chiefly by the Athabaska and Peace rivers. The former flows northeastward from the western uplands of Southern Alberta to Lake Athabaska in the far northeastern corner of the Province. This lake is drained through the Great Slave River northward into Great Slave Lake, and thence through the long course of the Mackenzie River into the Arctic Ocean. Shortly after issuing from Lake Athabaska, the waters are swelled by the confluence of the Peace or Beaver River, which rises in British Columbia and flows northeast through Northern Alberta.

The available water-power in the streams of the Province at ordinary minimum flow, is estimated at 475,281 horsepower. The most important hydroelectric power developments up to 1921 were on the Bow River (a tributary of the South Saskatchewan), near Calgary, where a total of 32,380 horsepower had been harnessed.

Forests. Of the original forests of Alberta, fire has now left only about 25 per cent. Stands of commercial saw-timber, consisting chiefly of spruce, lodgepole pine, Douglas fir, poplar, balsam, white birch, and tamarack, occur in belts along the rivers and lakes, covering an area estimated in 1920 at about 5,400,000 acres, or 7.3 per cent of total land area, with a total estimated available supply of 17 billion feet. The Crown forests are under Dominion Government control, and 12,072,960 acres are set aside as reserves. In 1923, the cut of lumber, chiefly from the Rocky Mountains Reserve, was 25,618,000 feet.

Climate. Ranging through 750 miles of latitude and with large areas of considerable elevation, Alberta naturally exhibits great variations of temperature. Extremes, however, cause little discomfort, even in the long winters, because of the dryness of the atmosphere. The chinook winds from the west also exert a moderating influence on temperature, especially in Southern Alberta. The mean annual temperature at Calgary is 37.4°; at Edmonton, 36.7°; at Medicine Hat, 41.6°. The climate as a whole is healthful, bracing, and enjoyable, and some of the resorts amidst the Rockies — Banff, for example — are famous for their magnificent lake and mountain scenery.

The Rocky Mountains at the west deprive the winds of much of their moisture, so that the rainfall, especially in Southern Alberta, is rather scant. In this region, irrigation and dry farming—that is, manipulation of the soil so as to conserve the supply of rain water as much as possible—are necessary for most successful cultivation. The average rainfall in the Province is about 17 inches, ranging from 14 inches at Dunvegan and Fort Chippewyan, to 21 inches at Banff. At Calgary and Edmonton, it is 17 inches; at Lethbridge, 16 inches.

Agriculture. For twenty years, Alberta was one of the greatest ranching regions in the world, but smaller farm holdings now prevail, and mixed farming is being increasingly followed. Agriculture in its various branches is the chief occupation of the people. The soil is a rich, black loam of great depth and inexhaustible fertility.

About 100,000,000 acres, or 62 per cent of the land area of the Province, is arable. In 1923, the area under cultivation was 11,316,542 acres, and field crops produced were valued at nearly $165,340,000. Considerably over half of this total crop value was represented by wheat, of which 166,834,000 bushels, with a value of $108,443,000 were harvested. Spring wheat is the great grain crop, but considerable fall wheat is also produced. Other principal crops, in order of value, in 1923, were: oats (over 114,977,000 bushels), barley, hay and clover, potatoes, rye, turnips, mangels, and other roots; flaxseed, alfalfa, fodder corn, mixed grains, beans, and peas.

The luxurious grasses, abundant water, and dry winter climate are favorable for live stock, which are still reared in great numbers, although the vast cattle ranches of a few years ago, which made Alberta famous throughout the world, are fast giving place to smaller farm holdings of workable size and less risk.

The farm animals of Alberta in 1923 were valued at $83,812,000, besides poultry worth $4,189,300. Beef and dairy cattled led in numbers. Horses, sheep, and pigs took next rank in the order named. Dairy products, 1924, included 17,868,853 pounds of butter and 1,865,608 pounds of cheese.

Minerals. The mineral resources of Alberta are abundant and varied. Coal deposits, including considerable anthracite, underlie an area of about 56,000 square miles, with reserves of supply estimated at over 300 billion tons. In 1923 nearly 107 tons of anthracite, over 3,000,000 tons of bituminous coal, and over 3,143,000 tons of lignite were taken from the mines. About 35 miles south of Calgary is a petroleum field which produced nearly 2,000 barrels in 1923. Rich tar sands are found along the Athabaska River. Natural gas is abundant at Medicine Hat, Bow Island, and elsewhere in Southern Alberta, and is also developing in the more northerly sections. Other minerals are: copper, gold, gypsum, iron, lead and silver, magnesite, manganese, nickel, phosphate, and salt.

Manufactures. The manufacturing industries of the Province are still of comparatively small volume, but are developing.

Calgary, the largest city of Alberta, had an estimated population of 72,500 in 1927 (an increase of nearly 30,000 in seventeen years), and is an important railroad and manufacturing center. It is the trading center of an immense agricultural and stock-raising district, and the chief supply station for mining districts in the Rockies and British Columbia. It has abundant water-power from the Bow River development, and is piped with natural gas from Bow Island.

Edmonton, the capital, was a city of 69,744 people in 1927, showing an increase of over 90 per cent in a decade. It is on the North Saskatchewan River, and is important as a railroad and manufacturing center, in the vicinity of rich coal mines. Here is the University of Alberta, with an important Agricultural College.

Government. The government of Alberta is vested in a Lieutenant-Governor, assisted by a responsible Cabinet, and by an elected Legislature consisting of a single chamber of 60 members. The Province sends 6 Senators and 16 Members of the House of Commons to the Dominion Parliament. Public revenue, 1923, was $10,419,146; expenditure, $10,990,834. Public schools are free, with separate schools for Roman Catholics.

Historical. Alberta comprises the former District of the same name, together with parts of the former Districts of Assiniboia and Athabaska. It was erected into a Province, September 1, 1905.

BRITISH COLUMBIA

Area. The area of British Columbia, third largest Province in the Dominion of Canada, is 355,855 square miles, of which 2,439 square miles are water surface. This exceeds the area of Texas, largest State in the American Union, by about 90,000 square miles. Vancouver Island is 285 miles long by 40 to 80 wide, and has an area of 16,400 square miles; the Queen Charlotte Islands, 5,000 square miles.

Population. The population of British Columbia increased from 49,459 in 1881, to 178,657 in 1901. In the next decade, it more than doubled, being 392,480 in 1911. In 1921, it was returned at 524,582, giving a density of 1.48 persons to the square mile, and showing an increase of 33.66 per cent in ten years. The Chinese population, 1921, was estimated at about 30,000; Japanese, 17,000. The Japanese have largely supplanted white labor in the fisheries, and are strong competitors of the whites in market-gardening. With the Chinese, they are also largely employed in lumbering and mining operations, agriculture, domestic service, etc.

Physical Features. The entire Province is included in the Cordilleran belt. Three principal mountain ranges traverse the mainland from northwest to southeast. In the east, forming in part the Alberta boundary, are the Rocky Mountains, with an average elevation of 8,000 feet. West of the Rockies, separated from them by a wide valley 600 miles in length, are the Gold Ranges, with the Selkirks and Cariboo Mountains, with many peaks of 10,000 feet elevation. Farthest west, the Coast Range, averaging 100 miles in width, parallels the Pacific seaboard, its mean elevation being 6,000 to 7,000 feet. The highest peak in the Province is Mount Fairweather, 15,292 feet. The greatest elevation on Vancouver Island is that of Victoria Peak, 7,484 feet. Between the Gold and Coast ranges is a great interior plateau, diversified with many lakes, streams, and mountainous uplifts, constituting an upland and drainage system of remarkable grandeur and complexity.

The principal river in the south is the Columbia, which receives the waters of the Kootenay before crossing the boundary into the State of Washington. A little farther north, the Fraser River, joined by the Thompson, empties into the Strait of Georgia. Northern British Columbia is watered on the west by the Skeena, Stikine, and Taku rivers; on the east, by the Peace River; and, in the northeast, by the Liard, Nelson, and other headwaters of the great Mackenzie River system. The available water-power in British Columbia streams is estimated at about 1,930,000 horsepower, of which, in 1925, 355,722 horsepower had been installed.

The Pacific coast-line of the Province measures 12,000 miles, and is noted for the number of its bays, passages, and islands.

Forests. In 1921, British Columbia contained over half of all the standing timber in the Dominion, with an average rate of growth double that in the rest of Canada. Up to Alaska, the coastal slopes are densely forested. The estimated wooded area is 92,000,000 acres, of which 33,000,000 acres is commercial saw-timber, with a merchantable stand of 350 billion feet. In the 40-mile-wide Railway Belt, the forests, containing about 50 billion feet of lumber, are controlled by the Dominion Government. The lumber cut in 1923 was valued at $27,571,142, and a large part of it was exported, chiefly to the U. S. Fourteen per cent of the paper of Canada is made in British Columbia, whose output, 1924, was about 216,200 tons of pulp and 145,934 tons of paper.

On the western slopes of the Coast Ranges, the trees attain gigantic size. The most valuable trees are Douglas fir, red and yellow cedar, white spruce, Western pine, Western hemlock, Engelmann spruce, cottonwood, and balsam.

Climate. As the western slopes of the mountains receive the first precipitation of the moisture carried by the prevailing westerly winds, the coast has a rainfall everywhere abundant and in some localities excessive. The average annual precipitation ranges from 32 inches at Victoria and 61 inches at Vancouver, to 101 inches at Prince Rupert, near the southern end of the Alaskan Panhandle, and 118 inches at Clayoquot, on the western coast of Vancouver Island.

Owing to the influence of the return Japan current in the Pacific, the coastal climate of British Columbia is extraordinarily mild. The mean annual temperature at Vancouver is 49°. The January average all along the coast is about 35°. On the seaboard, heavy fogs sometimes prevail. On the interior plateau, the climate is subject to extremes, the winters in the northern section being severe. The average rainfall on the plateau is 12 inches.

Agriculture. The principal agricultural districts are the Fraser valley, southwestern Vancouver Island, and the Okanagan District. Throughout the Province, especially on the interior plateau, are areas of open country chiefly pastoral or requiring irrigation. Of the total cultivable area of 22,000,000 acres, not much over one-tenth had been occupied in 1923. In that year, field crops worth over $18,912,000 were grown on 374,059 acres, the principal crops, in order of value, being: timothy and clover, grain hay, potatoes, turnips, mangels, and other roots, wheat (chiefly spring), oats, alfalfa, fodder corn, barley, rye, mixed grains, peas, hops, beans, and tobacco.

Special attention is given to fruit culture in Okanagan valley, West Kootenay, the lower Fraser valley, and southern Vancouver Island. Apples are the leading fruit, 75 per cent of the 1,975,000 trees in 1919 being in Okanagan valley. Other fruits are plums and prunes, peaches, pears, apricots, cherries, grapes, berries, figs, etc.

Beef and dairy cattle are the principal live stock, and there are many horses, sheep, goats, and pigs. Bee culture is extensively carried on. Dairy farming is rapidly growing.

Fisheries. The large rivers and protected sounds afford splendid fishing. Salmon canning and fur sealing are the most valuable branches of the industry. The total fish catch, 1923, was valued at over $20,000,000, chiefly salmon, halibut, and herring. The salmon pack in 1924 was over 1,700,000 cases, and the halibut catch, 1924, was worth $32,194,700. Whales are also hunted.

Minerals. Minerals have been the chief source of wealth, the Province ranking second in 1923, with total output valued at over $43,757,388. Gold, first discovered in 1856, is found throughout the Province, the richest district being the Cariboo. Up to the end of 1923, the gold taken out amounted to nearly $250,000,000, the output in 1923 being 200,140 ounces valued at $4,137,261. A smaller value of silver was produced the same year (recovered chiefly from lead and copper ores), the total silver output to end of 1923 being over $65,000,000. Nearly 55,225,000 pounds of copper and over 60,000,000 pounds of zinc were produced in 1923, and the lead output, chiefly in East and West Kootenay, was over 99,000,000 pounds, being about two-thirds of all that Canada produced.

Coal deposits are very widely distributed. The available reserves are estimated, 1925, at 75 billion tons, chiefly bituminous. Iron ores are found in large deposits. Other minerals are chromite, clays, fluorspar, graphite, gypsum, pyrites, magnesite, manganese, natural gas, platinum, salt, talc, and tungsten.

Manufactures. Lumbering, pulp and paper, fish packing, ore reduction, and shipbuilding are the leading manufacturing industries. Ships built in 1923 were valued at $1,948,207.

Vancouver, largest city, in 1921, had a population of 142,150, or, with suburbs, about 200,000, including 10,000 Orientals; it is on Burrard Inlet, and is a terminus of the Canadian Pacific Railway, ranking as the chief Canadian port on the Pacific. Victoria, the capital (population 42,000), on Vancouver Island, is a seaport with large shipping trade. New Westminster (population 14,495), near the mouth of the Fraser River, has valuable lumber and salmon-fishing interests.

Government. Government is vested in a Lieutenant-Governor, assisted by a responsible Cabinet, and by a Legislative Assembly of 48 members popularly elected for a four-year term. The Province is represented in the Dominion Parliament by 6 Senators and 14 Members of the House of Commons. Public revenue, 1924, estimated, was $19,637,710; expenditure, $21,476,272.

Historical. Previous to 1858, the mainland of what is now British Columbia was known as New Caledonia, and was controlled by the Hudson's Bay Company, which, in 1843, had leased Vancouver Island. The entire region became a Crown Colony in 1848, the first British colony in Northwest America. In 1858, the mainland was erected into a separate colony, under the name of British Columbia, with which Vancouver Island was incorporated in 1866. The colony was admitted into the Dominion as a Province, July 20, 1871.

YUKON

Yukon Territory lies in the extreme northwest of Canada, adjoining Alaska. The international boundary runs almost entirely along the meridian of 141° W. Long., due north from Mount St. Elias to the Arctic Ocean; but, at the southwest corner of Yukon, follows for a short distance the crests of the St. Elias Mountains skirting the Alaskan Panhandle. The Territory is separated from British Columbia, on the south, by the parallel of 60° N. Lat. On the east, it faces the Provisional District of Mackenzie (Northwest Territories), the boundary following in the main the divide between the Mackenzie and Yukon river basins. On the north, Yukon has a coastline of about 180 miles on Beaufort Sea, an arm of the Arctic Ocean.

Historical. Early exploration in this region was done by agents of the Hudson's Bay Company who established Fort Selkirk and Fort Yukon about 1848. In 1869, when the Company sold its Rights to the Crown, Yukon passed to the Dominion, becoming a Provisional District of the Northwest Territories. Following the inflow of population which resulted from gold discoveries in the Klondike in 1896–97, the region was organized as a separate Territory on June 13, 1898.

Area and Population. The Territory has a total area of 207,076 sq. m. (206,427, land; 649, water). Population, 1921, was 4,157, as compared with 8,512 in 1911, and 27,219 in 1901.

Physical Features. Yukon, composed of numerous plateaus and mountains, lies wholly within the Cordilleran region. Between the plateau country and the Alaskan Panhandle lie some of the ranges of the Western Belts with peaks of great height. On the border, Mt. St. Elias rises 18,024 ft.; while Mt. Logan, Canada's highest peak, towers to 19,539 ft. The principal ranges of the interior are the Glenlyon, Pelly, Teslin, Cassiar, and Mackenzie Mountains. Average elevation is 2,000 feet.

The greater part of Yukon Territory is drained across Alaska, into Bering Sea, by the Yukon River. This stream is navigable for about three-fourths of its course. The chief tributaries are the Stewart, White, Pelly, Lewes, and Porcupine Rivers. The northern extreme drains directly into the Arctic Ocean; while the run-off from the southwest reaches that destination by way of the Liard and Mackenzie Rivers. There are no large lakes within the borders of Yukon.

Climate. Summers are short but pleasant. Winters are severe with low extreme of —60° F. At Dawson the mean annual temperature is 27.7° (—20° for January, 60° for July); rainfall, 14 in.

Resources and Industries. The great sources are mines, timber, and wild animals. Agriculture is confined to hardy crops for home consumption. Forest trees are small and grow to elevations of 1800–2800 ft. Principal species, black and white spruce, aspen, balsam-poplar, birch and lodgepole pine. Fur-bearing animals are numerous. Fox (white, red, silver, and blue), marten, fisher, lynx, otter, muskrat, skunk, wolverine, wolf, squirrel and bear abound. Big game animals are moose, caribou, deer, mountain sheep, and bear.

The mineral wealth attracted world attention in the late nineties. The Klondike gold strike in 1896–7 brought hosts of prospectors and speculators. Total gold taken from Territory, 1885–1920, is estimated at $201,366,000.

Coal deposits are found in the heart of the gold fields. Anthracite occurs at Tantalus Butte and along Lewes River. Copper is produced in the Upper White River, Lewes River, and Kluane districts. Other minerals of importance are galena, silver, and platinum.

Government. Territory administered by a Gold Commissioner (who is also Crown Timber and Land Agent), assisted by elected Legislative Council of 3 members. In Dominion Parliament, Yukon is represented by 1 Member of House of Commons. Order is maintained by patrols of Royal Canadian Mounted Police. Public schools, 1922, numbered 4 (1 Roman Catholic), with 10 teachers and 250 pupils. There are about 58 miles of railway.

Dawson, capital, founded 1896, is on Yukon River, at confluence with Klondike. Population (once 20,000), is now 973. Reached from White Horse (460 miles upstream) by steamer, June 1 to Oct. 5; by stage rest of year. White Horse (pop. 331), on Lewes River, is chief copper-mining center, terminus of White Pass & Yukon Railway, which runs north 112 miles from Skagway, Alaska.

NORTHWEST TERRITORIES

In 1869 the territory tributary to Hudson Bay was secured by the Crown from the Hudson's Bay Company and made an integral part of the Dominion of Canada under the name of Northwest Territories. Various divisions and allocations of the region have been made since that date to facilitate administration, the last one in 1920 when the present three Provisional Districts were formed.

Keewatin, part of former Provisional District of same name, embraces the mainland north of Manitoba, northwest and north of Hudson Bay, except Melville Peninsula, and includes Southampton, Mansel, and Coats Islands, in the northern waters of the Bay. **Mackenzie** consists of the mainland north of Saskatchewan, Alberta, and eastern British Columbia, up to the Arctic Ocean, stretching from the Keewatin boundary (102° W. Long.) west to Yukon Territory. **Franklin** comprises Melville Peninsula on the mainland, and all the northern continental islands (except Southampton, Mansel, and Coats) down to Hudson Strait.

Area and Population. The total area of the Northwest Territories is 1,309,682 sq. m. (1,258,217 land; 51,465 water, exclusive of Hudson Bay and other tidal waters). Area of Keewatin, total, 228,160 sq. m. (218,460 land, 9,700 water); Franklin, 554,032 sq. m., total area; Mackenzie, total, 527,490 sq. m. (493,225 land, 34,265 water). Population in 1921 was 7,988, as compared with 6,507 for same territory in 1911.

Physical Features. The Territories occupy part of the central continental basin known as the Great Plains, bounded on the west by the foothills of the Cordilleras while on the east they merge into the Laurentian Highlands. In the north they are composed of the islands of the Arctic Ocean.

The chief rivers of Keewatin are the Dubawnt and the Backs, the former flowing into Hudson Bay while the other empties into the Arctic Ocean. Mackenzie is drained into the Arctic, except for a part in the southeast, by the Mackenzie and Coppermine Rivers. The Mackenzie is over 2,500 miles long, and its principal tributaries are the Liard, Peace, and Slave Rivers. There are many lakes in the Territories the largest being the Great Bear, Great Slave, la Martre, Aylmer and Dubawnt.

Climate. Arctic conditions prevail in the northern part where —79° F. has been recorded. Mean annual temperature is about 14°. Extremes, summer 85°, midwinter, —50°. Rainfall 10 in. Snowfall seldom exceeds 2 ft. except in the mountains.

Resources and Industries. Hunting and trapping are the chief occupations and are allowed under strict license. Forests consist of black and white spruce, balsam, aspen, birch, tamarack, and jack pine. Timber is small, especially in the moss-covered bogs or "muskegs."

Fur-bearing animals are rigidly protected. Within the Arctic Circle the polar bear is fairly plentiful. Fox, marten, beaver, caribou, skunk, musk-ox, mink, muskrat, fisher, otter, wolf, bear, deer and moose are also found. The Keewatin islands of Southampton, Mansel, and Coats have been reserved as breeding grounds for reindeer and musk-oxen.

Minerals are undeveloped. An estimate of the coal fields is about 11 billion tons. Petroleum fields underlie 300,000 sq. miles in the Mackenzie Basin.

Government. Territories directly administered by a Commissioner at Ottawa, Ont., appointed by Governor-General. Order maintained by patrols of Royal Canadian Mounted Police. Fort Smith, on Slave River at Alberta line, is natural gateway to Mackenzie; here are offices of Mining Recorder and Crown Timber and Land Agent. Fort Smith is reached from Edmonton, Alberta, by two main routes—(1) by rail to Peace River, or (2) to McMurray on the Athabaska; thence by steamers and portages. From this point, steamers descend the Mackenzie 1,300 miles to McPherson. Winter travel is by dog train. There are no regular roads, no hotels, no telegraph stations. There is an Anglican or Roman Catholic mission (often both) at every post; and the Catholics maintain hospitals at Fort Smith and Simpson.

MEXICO

Area. The area of Mexico is 767,198 square miles.

Population.

Year	Population	Year	Population
1910	15,063,207	1921	14,334,295
1925 (est.)	15,500,000		

About 19 per cent of the people are pure or nearly pure whites, 38 per cent Indians, and 43 per cent of a mixed race. Spaniards and Americans ordinarily make up about 40 per cent of the foreign population.

Mainly because of climatic conditions, the population of Mexico is very unevenly distributed. The northern provinces and most of the regions of the Pacific coast are arid, and the Atlantic coast is, in general, low, damp, and unhealthy. Consequently, the densest population is found inland in the Federal District, and the least densely inhabited regions are on the peninsula of Lower California on the Pacific coast, and in Quintana Roo on the Caribbean coast of the Yucatan peninsula.

Climate. Although the country is about equally divided geographically between the temperate and the torrid zones, the great elevation of the land surface causes three distinct zones of climate: the hot zone, or *tierras calientes*, between sea-level and an elevation of about 3,000 feet; the temperate zone, *tierra templada*, between 3,000 and 6,000 feet; and the cold zone, or *tierras frias*, above 6,000 feet. In consequence, a very wide range of temperature, as much as 90 degrees, is found.

The great plateau is the most favored region of the country, the temperature of the lands in the latitude of Mexico City ranging between 65° and 75° the year around. Below the parallel of 28° N., lies the zone of wet and dry seasons.

Religion. Mexico is overwhelmingly Roman Catholic, but the Church is independent of the State, and all forms of worship are tolerated.

Government. Mexico, by its constitution of 1917, is a Federative Republic, governed by a President elected by direct popular vote for 4 years, assisted by a Council (7 Secretaries of State, 3 State Departments) and a Congress of two Houses. The Senate consists of 58 members (two for each State), elected for 2 years by universal suffrage. The House of Representatives is similarly elected, one member for every 60,000 inhabitants.

The Republic is composed of the Federal District, 28 States, and 2 Territories, each of which has its own constitution, governor, legislature, and judicial officers, who are popularly elected under rules similar to those of the Federation.

Since the end of 1910, Mexico has been torn by revolution, which has resulted in a succession of provisional presidents and military dictators, each assuming office as the result of a revolution deposing his predecessor. The disorder has been a great check to Mexican development.

Education. Education has progressed in recent years, but two-thirds of the inhabitants are still illiterate. Primary instruction is free and compulsory. English is taught in the higher schools. There are many denominational schools and colleges, among which that of San Nicolas de Hidalgo, at Morelia, is oldest and most famous.

Industries and Resources. *Agriculture.* Because of primitive methods and unfavorable climatic and surface features, agriculture is undeveloped in many parts. The northwest is largely arid, and, even with irrigation, water supply is none too abundant. Many parts of the great plateau are also either too arid for agriculture or are broken by mountain masses. In the *tierras calientes*, however, vegetation is luxuriant. The eastern coast is swampy and unhealthy, and rains are frequent.

The crops which are grown for home consumption are corn, wheat, barley, and beans. These staple articles are grown wherever any crops can be produced. Sugar, tobacco, indigo, cacao, rice, and sweet potatoes are grown in the *tierras calientes*. Fruits are plentiful, both wild and cultivated, the most important being the banana, guava, plantain, orange, lemon, melon, and pineapple.

Sisal, or henequen, the fiber of the agave plant, is of great commercial importance in Mexico. The plant is similar to the century plant, and bears long, spiked leaves which contain the tough fibers called sisal. The agave is produced chiefly on the light, shallow soil overlying the rock formations of Yucatan.

Another product of the agave plant is the sap, which is manufactured into intoxicating liquors called "pulque" and "mescal."

Cotton has become an important crop under irrigation. It is now extensively produced in the northwest, where the Imperial Valley of southeastern California, irrigated from the lower Colorado River, is carried south of the international boundary. The total crop, 1923, was valued at $57,591,064.

Chicle is the dried sap of the sapote tree, which grows in the hot belt, or *tierras calientes*. This product is exported in great quantities for the manufacture of chewing gum.

Guayule, a native bush, produces a cheap grade of rubber, and the production is being rapidly developed.

Coffee, cultivated in the *tierra templada*, especially in the southern and southeastern states, is an important export.

Live stock is raised by the inhabitants of the semi-arid regions, and cattle-ranching is carried on in the north and central sections much as it is in the southwestern United States. Goats and sheep are reared in large numbers, descended from the flocks introduced by the Spaniards at the time of their earliest settlements. Swine are raised in large numbers. The horse is used chiefly for saddle purposes, and the mule and ass are employed in every part of the country as draft and pack animals.

Mineral Resources. The greater part of the wealth of Mexico is the rich supply of minerals. It was this hidden wealth which first attracted the Spaniards and led to the conquest of the country. Twenty-four of the thirty-one states and territories are active producers of minerals.

Mexico has long led the world in the production of silver, yielding about 36 per cent of the world's total output. She produced 81,076,900 ounces in 1922.

In gold production she ranked 4th in 1922, with output of 752,240 ounces, $15,468,500. The metal is found in half of the states of the Republic.

In 1918 she had risen to second rank (next to the United States) as a producer of petroleum. The output, 1923, was 149,584,856 barrels, and Mexico still ranks next to the United States in production.

Copper is mined in Lower California, Guanajuato, Guerrero, Jalisco, Michoacán, Sonora, and Tamaulipas. Lead is found in Hidalgo and Querétaro, and in many of the silver-producing districts. Coal is of a low grade, produced only in Coahuila. Iron, mercury, sulphur, antimony, bismuth, tin, platinum, tungsten, molybdenum, manganese, arsenic, opals, tourmaline, turquoise, asphalt, graphite, salt, and marble are also found.

Forests. The forest lands of Mexico cover almost 69,000 square miles. The variety and magnificence of the forests of the *tierras calientes* can scarcely be described. Mahogany, rosewood, ebony, brazil-wood, rubber, and cedar trees, palms, oil-bearing and medicinal plants, dyewoods, cacti, and lianas grow in luxuriant profusion.

Fisheries. The pearl fisheries on the eastern coast of Lower California have been worked since the arrival of the Spaniards. Sponges and the tortoise-shell turtles are found in large numbers off the coasts of Campeche, Yucatan, and some of the Pacific States.

Manufactures. Foreign capital has been attracted by Mexico's vast resources, but disorders have checked development. About $500,000,000 of American money, $88,000,000 British, and $10,000,000 French, are invested in mining. Sugar refineries are largely American-owned, and electrical enterprises largely American-controlled. Textile mills have over 762,000 spindles, and there are many tobacco factories. There are oil refineries at Tampico, Puerto de Lobos, Tuxpan, Veracruz, and Minatitlan. Other industries are iron and steel, rubber, leather, flour, meat-packing, etc.

Mexico adopted a gold monetary standard in 1918.

Defense. *Army.* The Mexican Army, 1925, consisted of 3,211 officers and 47,240 men. Nominal strength, 50,000 officers and men. Every citizen is compelled to serve in the active army or national guard.

Navy. The navy comprises 7 gunboats, 5 torpedo-boats, and 1 coast defense vessel.

CENTRAL AMERICA

Area. Central America, including Panama and the Canal Zone, has a total area of 215,969 square miles. .

Physical Features; Climate. Cordilleras along Pacific; interior elevated plateau sloping to Atlantic. Climate of uplands temperate; low coast lands hot and insalubrious. Rainfall abundant; on Atlantic slopes, almost constant.

Political. A Federation was formed, 1921, by Guatemala, Salvador, Honduras, and Costa Rica, but was dissolved in 1922. Panama's refusal to accept United States Supreme Court Chief Justice White's interpretation of French President Loubet's arbitration award of 1900 in her boundary dispute with Costa Rica, led to serious clash, 1921; but United States intervention prevented hostilities between the two republics.

GUATEMALA

Area. Guatemala has an area estimated at 42,353 square miles.

Population. The population, census of 1920, was 2,004,900, almost three-fifths pure Indians, and most of the remainder half-caste.

Religion. The Roman Catholic religion predominates.

Government. The legislative power of the Republic, is vested in an elected National Assembly and a partly elected Council of State. The President is elected for a term of six years.

Education. Primary instruction is free and compulsory and well maintained. University of Guatemala established 1918.

Industries and Resources. *Agriculture* is the chief occupation of the people. Coffee is by far the most important crop, and makes up three-fourths of the total value of exports of the country. Bananas form the second important product, and sugar the third. Chicle is also gathered for export, and rice, corn, wheat, and beans are raised for home consumption. Germans control about a third of the coffee plantations.

On the tablelands of the interior, many thousands of acres are devoted to the raising of cattle, sheep, and pigs.

Forests. Mahogany, cedar, rubber, dyewoods, and chicle are produced in abundance, especially in Peten District, on Atlantic slope.

Minerals. Gold, silver, copper, iron, and lead are existant, but very little worked.

HONDURAS

Area. The area of Honduras is about 44,275 square miles.

Population. Inhabitants according to official figures, 1923, number 773,408, most of them Indians and half-castes.

Religion. Roman Catholicism is the prevailing religion.

Government. The government of the Republic is vested in a President popularly elected for four years, a Council of Ministers, and an elected Congress of Deputies.

Education. Instruction is free, compulsory, and entirely secular.

Industries and Resources. *Agriculture:* Bananas, cocoanuts, and coffee are the chief products of Honduras. Tobacco, rubber, sisal, castor beans, vanilla, corn, wheat, rice, sugar, and beans are raised.

There are large numbers of cattle, pigs, and sheep.

Forests. Mahogany and other cabinet woods, logwood, brazilwood, ivory nuts, and sarsaparilla are exported. Pines grow in the highlands.

Minerals. The mineral resources of Honduras are great but inadequately developed. Gold, silver, platinum, copper, lead, zinc, iron, antimony, and coal are found widely scattered.

Manufactures. "Panama" straw hats and cigars are the only manufactured articles produced for export.

SALVADOR

Area. Salvador has an area of 13,176 square miles.

Population. Population estimated at 1,657,196 in 1927, chiefly Indians and half-castes, besides a large foreign element.

Religion. The dominant religion is Roman Catholic.

Government. The Republic is governed by a President (4-yr. term) and Cabinet, and a Congress of Deputies (1-yr. term, universal suffrage).

Education. Instruction is free and compulsory. Salvador has a national university.

Industries and Resources. *Agriculture* is the principal industry. Coffee is the great product of the country, and is extensively exported. Cacao, tobacco, cotton, sugar, fruits, indigo, rubber, bananas, hemp, and sisal are also produced. Cattle, horses, sheep, and pigs are raised, and hides are exported in considerable quantity.

Forests. The forests abound in valuable timber, resins, and gums. Rubber is an important product for export trade. Medicinal plants flourish. Balsam is extensively cultivated about Cape Remedios.

Minerals are growing in importance; gold, silver, copper, lead, iron, and mercury are worked chiefly in the Metapan District.

NICARAGUA

Area. The area of Nicaragua is 51,660 square miles—making it the largest Central American Republic.

Population. Inhabitants in 1927 numbered 650,000, most of them half-castes and aboriginal Indians. Only about 25 per cent live in the eastern half, and they are mainly Indian negroes.

Religion. The prevailing religion is the Roman Catholic.

Government. The Republic is governed by a President, with a responsible Council of Ministers, and a Congress of two elected Houses.

Education. Primary education is free and compulsory. There are three universities.

Industries and Resources. *Agriculture:* Coffee is the principal product. Bananas, sugar, cacao, tobacco, cocoanuts, and rice are also cultivated. Cattle and swine are raised in large numbers.

Forests. The forests contain mahogany, cedar, rubber, valuable timber, dyewoods, gums, and medicinal plants.

Minerals. Gold is the chief mineral export. Silver, copper, and gems are also found in considerable quantities.

Manufactures. Cheese, butter, leather, sugar, spirits, cigars and cigarettes, shoes, and furniture are the principal products.

COSTA RICA

Area. The total area is 23,000 square miles.

Population. There were 520,766 inhabitants in 1925, including 18,000 British West Indian negroes on banana plantations.

The infusion of Spanish blood is greater than in any other Spanish-American country. Many uncivilized Indians live in the north.

Religion. The Roman Catholic is the state religion.

Government. The Republic is governed by a President (4-yr.term), his six Secretaries of State, and a Constitutional Congress (4-yr. term).

Education. Elementary instruction is free and compulsory.

Industries and Resources. *Agriculture:* Coffee and bananas are the chief products. Rice, corn, barley, potatoes, and beans are cultivated in the interior, and cacao, vanilla, sugar cane, cotton, and indigo are raised on the warm coast-lands.

Stock-farming is an extensive industry, and many cattle, horses, pigs, sheep, mules, and goats are raised. There are wide grassy plains in the southwest, and good pasture also in the highlands.

Forestry. The forests are remarkable for hardwoods. Mahogany, rosewood, ebony, and precious dyewoods cover the highlands, especially to the northeast. Rubber is also found, and, on the higher elevations, oaks and conifers.

Minerals. Gold and silver mining is carried on extensively, especially on the Pacific slope. Iron and manganese are widely distributed

BRITISH HONDURAS

Area. The total area is 8,598 square miles.

Population. There were about 47,893 inhabitants of a mixed nature, with few whites, in 1925.

Religion. Both Roman Catholic and Protestant.

Government. British Honduras is a Crown Colony, administered by a Governor, an Executive Council, and a Legislative Council.

Education. The schools are largely denominational, but most of the primary schools are aided by Government grants.

Industries and Resources. *Agriculture* is not extensive. Bananas, cocoanuts, and chicle are grown for export, and other agricultural products are coffee, cacao, plantains, Indian corn, sugar cane, rubber, and tobacco. The higher lands afford good pasturage.

Forests. The staple products of the country are mahogany and logwood. Forests are also rich in cedar and cabinet woods.

PANAMA

Panama was formerly a Department of the South American Republic of Colombia, but declared its independence and was established as a separate republic in November, 1903. It has an **area** of 32,358 square miles. Its **population**, exclusive of the Canal Zone, was 446,098 by census of 1920, largely mixed Spanish, Indian, and negro elements, with about 3,500 Chinese and 40,191 British West Indians. **Government** comprises a President, directly elected for four years and ineligible for next term, who is assisted by a Cabinet of five Ministers. Legislature, an elected Chamber of Deputies (33 members), meets biennially.

The dominant **physical feature** is the Cordilleran range of mountains traversing the length of the republic. As Panama lies only between 8 and 10 degrees north of the equator, its **climate** is distinctly tropical. The average temperature varies but slightly in different sections, but is a degree or two higher on the Caribbean than on the Pacific coast. Fully 85 per cent of the yearly rainfall of 127 inches comes with southeast winds between mid-April and mid-December. Bracing northeast winds prevail the four months' dry season.

Industries and Resources are developing. Commerce is chiefly with the United States, the leading products exported being: bananas, cacao, cocoanuts, indigo, tobacco, sugar-cane, rubber, ivory nuts, turtle shells, pearls, and mahogany. Cocoanut plantations are increasing. Rich manganese deposits have been found.

Panama (population 66,851), the capital, is on the Pacific Ocean. Colon (population 32,952) is on the Atlantic; it has a large biscuit factory.

CANAL ZONE

The isthmian region under American control is known as the Canal Zone. It was acquired and organized as a basis for construction, operation, maintenance, and protection of the Panama Canal. This territorial belt extends five miles on each side of the center line of the canal route, and reaches seaward at each end to the international three-mile limit from mean low-water mark on shore. The **area** is 549 square miles; and the **population**, 1925, was 27,151, including about 7,113 Americans. In the Zone are the islands of Perico, Naos, Culebra, and Flamenco in the Bay of Panama; but the cities of Panama and Colon are outside the Zone jurisdiction, though the United States has authority to enforce sanitary ordinances and maintain public order in these cities in case the Republic of Panama should not be able, in the judgment of the United States, to do so.

The United States acquired the Zone, February 26, 1904, by treaty with Panama, paying $10,000,000 immediately, and $250,000 annually since 1913. Under the provisions of this treaty, the United States may acquire by purchase, or by exercise of the right of eminent domain, any lands, buildings, water rights, or other properties necessary and convenient for the construction, maintenance, operation, sanitation, and protection of the Canal.

THE PANAMA CANAL

The height of the continental divide at the point cut through was about 335 feet above sea-level. Gold Hill, the highest point alongside the channel, rises to 540 feet. Owing to the curvature of the isthmus (like that of a letter S lying on its side), the general course of the canal from the Atlantic entrance on Limon Bay is southeastward to the Pacific.

The length of the canal from deep water to deep water is 43.8 nautical miles, or 50.4 statute miles. A sea-level stretch of 5.77 nautical miles from the Atlantic entrance, leads to the Gatun Locks, rising by three steps to Gatun Lake, 85 feet elevation. This lake (area 106.4 square miles, with a reservoir capacity of 183 billion cubic feet, the largest artificial reservoir in the world) was formed by damming the Chagres River. A run of 20.55 miles on the lake, to Gamboa, brings us to the famous Gaillard Cut (formerly called Culebra Cut), 6.97 miles long, 300 feet wide at bottom, extending to Pedro Miguel Lock and Dam on the Pacific slope, where the vessel is lowered one step to Miraflores Lake, 55 feet elevation. Here, a run of about one mile, to the southern end of the lake, brings us to the Miraflores Locks, where, by two steps, the vessel is lowered again to sea-level, and wends its way through a seven-mile channel leading past Balboa into the Pacific Ocean.

The minimum bottom width of the canal channel (in Gaillard Cut) is 300 feet; maximum, 1,000 feet. The depth of the channel ranges from a minimum of 41 feet, to about 80 feet in parts of Gatun Lake. The clear interior width of the lock chambers is 110 feet; length, 1,000 feet. The Gatun Dam was built by filling the space between two natural ridges, with sand and clay; it is 1½ miles long, ½ mile wide at base, and 100 feet wide at its top, which has an elevation of 105 feet.

The Panama Railroad runs east of the Canal, between Colon and Panama, 47.1 miles, with a branch from Pedro Miguel to Las Cascadas crossing the canal on a swinging pontoon bridge at Paraiso. It was first built by an American company, 1850-55, the route then lying chiefly west of the present canal route, but was later owned by the French, and finally purchased by the United States.

The isthmus was visited by Columbus on his fourth voyage, 1502, and Balboa crossed it, discovering the Pacific in 1513. An early suggestion of a canal was made by Balboa's companion, Alvara de Saavedra, and the first survey for a canal route was made in 1534. Construction was begun by the French in 1883, under Count Ferdinand de Lesseps, builder of the Suez Canal. The French company failed in 1889, but the French resumed work in 1895, continuing for 5 years. The Americans took possession May 4, 1904. Of the 78,146,960 cubic yards of excavation done by the French, American engineers used 29,708,000 cubic yards. The United States paid $40,000,000 for the French rights and property, including the railroad.

The Panama Canal was opened to navigation, August 15, 1914. Construction was completed January 1, 1915. Occasional slides have seriously obstructed traffic. The average time of passage through the canal is 7 to 8 hours; the record time, 4 hours 10 minutes. Electricity is used for towing vessels into and through locks, and to operate gates and valves, power being generated by water turbines at the head of Gatun Lake.

The cost of construction up to June 1, 1920, including the purchase of the French rights and the first payment to Panama, but excluding about $30,000,000 expended on fortifications, was about $375,000,000. The total appropriations on Canal account, including purchase of rights, payments to Panama, construction, operation, etc., to January 1, 1926, were $470,926,348. Receipts from tolls, from the opening of the canal to navigation, up to January 1, 1926 were $119,203,523. During the same period, the cost of operation and maintenance was $78,086,461. In 1925 the cost of operation and maintenance was $8,116,693; revenues, $21,400,524. Ocean-going traffic in the fiscal year 1925 comprised 2,260 vessels northbound (to Atlantic), with cargo of 16,560,439 tons; and 2,413 vessels southbound (to Pacific), with cargo of 7,398,397 tons. Of the total of 4,673 ships passing through the canal in the fiscal year 1925, 2,326 were American, 1,211 British, 192 Norwegian, 105 French, 29 Chilean, 172 Japanese, 42 Danish, 73 Peruvian, 49 Swedish, and 102 Dutch.

Great terminal and supply facilities have been constructed at both entrances to the canal, including repair shops, foundries, dry-docks, piers, cold-storage plants, oil tanks, coal bins, commissary stores, and all other accessories of great modern ports of call. Much cargo is transferred at the Atlantic terminus, to vessels plying the Atlantic. Business at the canal terminals is conducted by the United States Government; but some private firms are operating in supplying the demand for ships.

By provisions of the Hay-Pauncefote treaty of December 16, 1901, between Great Britain and the United States, the Panama Canal is used on equal terms by vessels of all nations.

The government of the Canal Zone is administered by the "Governor of the Panama Canal," who reports to the President of the United States, but who is under direct supervision of the Secretary of War. As a military reservation, the Canal Zone has been depopulated; and it is not open to settlement or trade by private individuals.

In April, 1921, as compensation to Colombia for the loss of Panama, including the Canal Zone and acquisition of American rights therein, the United States agreed to pay Colombia the sum of $25,000,000.

WEST INDIES

Under the broad name of the West Indies are included groups of Atlantic islands of different political affiliations, lying off the southeast coast of North America and extending from near the coast of Venezuela northward to the latitude of North Carolina. Of these islands, the independent Republic of Cuba and the United States possession of Porto Rico are treated elsewhere in this volume.

Haiti. The Republic of Haiti, embracing the western portion of the island of Haiti, has an area of 10,204 square miles, with a population of 2,500,000, most of whom are negroes. Roman Catholicism is the prevailing religion. Legislative power is vested in a National Assembly of two houses. The President is elected for four years by the houses in joint session. Agriculture is the chief occupation, with coffee, cacao, cotton, sugar, tobacco, fruits, and honey as leading products. The most valuable export is coffee. The considerable mineral resources are undeveloped. Cigars, cigarettes, sugar, and rum are the chief manufactures. By treaty, 1915, Haiti became a virtual protectorate of the United States. Capital, Port au Prince (125,000).

Dominican Republic. The Dominican Republic, embracing the eastern portion of the island of Haiti, has an area of 19,332 square miles, with a population of 1,000,000 in 1927, the majority creoles and mulattoes. The prevailing religion is the Roman Catholic. Legislative power is vested in a National Congress of two houses. The President is chosen for a term of six years, assisted by a Cabinet Council. Elementary education is free and compulsory. The cultivation of sugar is a flourishing industry, and mahogany, logwood, cotton, tobacco, cacao, cocoanuts, coffee, honey, and copper are exported. Capital, Santo Domingo (30,943).

Jamaica. The British Crown Colony of Jamaica has an area of 4,450 square miles (including the 224 square miles of the Turks, Caicos, and Cayman islands, and Morant Cays and Pedro Cays); population, est. of 1927, 936,927, largely blacks. There is no established religion, but the Church of England and the Baptist Church have the strongest representation. The Governor is assisted by a Privy Council and a partially elected Legislative Council. Women were enfranchised in 1919. The climate is enjoyable, with little humidity. Bananas, raw sugar, coffee, cocoanuts, oranges, cacao, ginger, and pimento are the chief agricultural products. Many cattle are raised. Logwood extract, rum, jippi-jappa ("Panama") hats, and banana food products are important exports. Large quantities of salt are produced on Turks and Caicos islands. Fishing for turtle and sponges is also carried on. Capital, Kingston (62,707).

Bahamas. The British Colony of the Bahamas is a group of twenty inhabited and many uninhabited islands and rocks off the southeast coast of Florida. The total area of the islands is 4,396 square miles; population, estimated 1924, 55,423. The climate of the Bahamas makes the islands a favorite winter resort for tourists. The Governor is assisted by an Executive Council, a Legislative Council, and an elected representative Assembly. Fruit culture is extensive, the products chiefly pineapples, oranges, and tomatoes. Turtle, sponge, and pearl fisheries are carried on extensively. Lumbering, pineapple canning, and the manufacture of sisal are the chief manufacturing industries. Capital, Nassau (pop. of island, 12,975).

Barbados. The British Colony of the Barbados, lying to the east of the Windward Islands, has an area of 166 square miles; population estimated 1927, 169,385, chiefly negroes. The Governor is assisted by an Executive Council, an Executive Committee, a Legislative Council, and a House of Assembly elected by the people. Sugar and cotton are the chief agricultural products. The fisheries are important. Sugar, molasses, and rum are the chief exports. Bituminous petroleum is also exported. Capital, Bridgetown (13,486).

Leeward Islands. The British Colony of the Leeward Islands has an area of 715 square miles, with a population of 122,242. The group, administered by a Federal Executive Council and a Federal Legislative Council, is divided into five Presidencies, each with its local government: Antigua (with Barbuda and Redonda), St. Kitts-Nevis (with Anguilla), Dominica, Montserrat, and the British Virgin Islands (with Sombrero). Sugar cane, cotton, tobacco, fruits, cocoa, and onions are the chief agricultural products; and sugar, molasses, rum, lime-juice, and citrate of lime are the manufactures. Some cattle are raised. Capital, St. John (6,997).

Windward Islands. The British Colony of the Windward Islands, ruled by a Governor, resident at St. George's, Grenada, has a total area of 516 square miles, with a population of 177,070. The colony consists of the islands of Grenada, St. Vincent, the Grenadines, and St. Lucia. With the exception of a Common Court of Appeal, the islands have their own institutions, at times acting together for other common purposes, however. Cocoa, arrowroot, spices, cotton, sugar, and rum are the chief products.

Trinidad. The British Crown Colony of Trinidad, which includes Tobago administratively, has an area of 1,862 square miles (exclusive of the 114 square miles of Tobago); population, estimated 1926, 387,470. The Governor is assisted by an Executive Council and a Legislative Council. Cacao occupies the greatest acreage; sugar cane, cocoanuts, and coffee are grown, and a considerable amount of land is devoted to pasturage. Natural asphalt is yielded by the famous "pitch lake" of Trinidad, and considerable oil is produced in the southern and southeastern part of the island. Capital, Port of Spain (63,954).

Guadeloupe. The French Colony of Guadeloupe, with its island dependencies of Marie Galante, Les Saintes, Désirade, St. Barthélemy, and the northern part of St. Martin, has an area of 688 square miles, with a population of 243,243. Sugar, coffee, vanilla, cacao, and rum are the most important exports, and fruits, tobacco, Indian corn, and vegetables are grown for local consumption. The valuable forests are little worked. Pointe-à-Pitre has a fine harbor. Capital, Basse-Terre (8,318).

Martinique. The French Colony of Martinique has an area of 385 square miles; population, 250,940. Government is vested in a Governor, a General Council, and elective municipal councils; a senator and two deputies are sent to France. Sugar, rum, and cocoa, coffee, tobacco, and cotton are the agricultural products. Sugar and rum are the leading manufactures. Eruption of Mt. Pelée, May 8, 1902, destroyed the city of Saint Pierre. Chief town, Fort-de-France (40,000).

Curaçao. The Dutch Colony of Curaçao, consisting of the islands of Curaçao, Bonaire, Aruba, the southern part of St. Martin, St. Eustache, and Saba, has an area of 403 square miles; population, 1924, 56,522, chiefly colored. The Governor and Council and the Colonial Council are nominated by the Sovereign. The chief products are maize, beans, pulse, cattle, orange peel (for making Curaçao liqueur), sisal, salt, and phosphate of lime.

Virgin Islands. This group, lying east of Porto Rico, was formerly known as the Danish West Indies, but was sold by Denmark to the United States for $25,000,000, during the Great War, largely because of the burden of expense of mobilization considered necessary against possible German invasion. The formal transfer was made March 31, 1917. The group comprises about 50 islands (area 133 square miles), of which the three principal ones are St. Croix (84 square miles; population 14,901), St. Thomas (28 square miles; population 10,191), and St. John (20 square miles; population 959). Total population, 1917, 26,051, chiefly negroes. Sugar cane is the principal product; other crops are guinea grass, vegetables, corn, beans, hay, cotton, arrowroot, and limes. Pineapples and bananas could be grown. Considerable live stock is reared. The bay tree flourishes on St. John, and bay rum is manufactured. St. Thomas, (formerly Charlotte Amalie; pop. 7,747), on St. Thomas, is chief of the three cities in the group. The other cities are Christiansted (4,574) and Frederiksted (3,144), both on the Island of St. Croix.

Bermuda. The British Colony of Bermuda, consisting of a group of 360 small islands 580 miles east of North Carolina, comprises an area of 19 square miles; population, 1927, 30,113. The Bermudas are noted for their climate and scenery, and are a famous winter and summer resort. The mean annual temperature is 70°, the thermometer never registering below 40°. Government is administered by a Governor, assisted by an Executive Council, a Legislative Council, and a representative House of Assembly. The chief products are vegetables (onions, potatoes, etc.) and lily-bulbs. Bermuda is an important naval base. Chief town, Hamilton (3,000).

PORTO RICO

Area. Porto Rico, one of the outlying possessions of the United States, is fourth in size of the Greater Antilles. Including its dependent islands, it has an area of 3,435 square miles, its length being 95 miles, breadth 35 miles. It lies 1,500 miles from New York, and the same distance from the Spanish port of Cadiz. The island of Vieques, 13 miles east of Porto Rico, is 21 miles long, 6 wide; Culebra, north of Vieques, is 7 miles long; Mona, in Mona Passage off west coast, is 7 miles long, 2 wide.

Population. The population, was 1,118,012 in 1910, and 1,299,809 in 1920; this included 11,651 on Vieques, and 839 on Culebra, (1925 est. 1,402,801). The density of population, 1925, was 409 per square mile; and 78.2 per cent lived in rural territory. Nearly 30 per cent of the inhabitants are mulattoes or negroes. Chinese numbered only 32 in 1920; Japanese, 4. Whites increased 29.5 per cent during the decade; but decreases were shown by the mulattoes (10 per cent) and the blacks (2 per cent).

Physical Features. The surface of Porto Rico is broken by mountain ranges of moderate elevation extending in general from northeast to southwest, with altitude ranging from 1,500 to about 3,750 feet, the highest elevation being that of El Yunque. The mountains are cultivable to their summits. Numerous rapid-flowing streams afford abundant water-supply, the largest rivers flowing northward. The coast-line measures less than 350 miles, and has but few good natural harbors, though there are many bays, inlets, and lagoons.

Climate. In the Western Hemisphere, within the torrid zone, no region surpasses Porto Rico in general healthfulness. The temperature rarely reaches 100°, and never falls below 50°; and during summer it is never above 95° on the coast. At San Juan, the mean annual temperature is 80.7°, ranging from 76.5° during January and February, to 83.2° in July and August.

Rainfall is copious, averaging 64.5 inches annually. It is heaviest north of the mountains, where the fields are frequently inundated by excessive downpours. South of the mountains, the country is subject to occasional droughts, necessitating irrigation for successful pursuit of agriculture.

Agriculture. The soil of Porto Rico in general is extremely fertile, and is largely under cultivation, agriculture being the principal occupation of the people. The plantations are chiefly on the coastal plains and in the river valleys. South of the mountain ranges, because of the droughts that sometimes prevail, irrigation is widely practiced, and, in this portion of the island, the Government is constructing an extensive irrigation system.

Cane sugar, which was introduced from the Canary Islands by way of Santo Domingo, is the staple agricultural product of Porto Rico. Under American administration, efficient modern methods have supplanted the primitive methods under which the sugar industry was formerly conducted, and production increased from 35,000 tons in 1899 to 491,000 tons in 1921—an increase of over 1,400 per cent in the annual output. Sugar is raised extensively also on the island of Vieques.

Other leading products are: tobacco, coffee, pineapples, grapefruit, oranges, and other tropical fruits, cocoanuts, sea-island cotton, vegetable textile fibers, and vegetables. Figs, date palms, and tamarinds grow readily. In 1924 the coffee crop was nearly 22,000,000 pounds, and the island sent nearly 19,000,000 pounds of leaf tobacco to the United States markets, besides over $5,400,000 worth of cigars and cigarettes.

Pasture lands in the island have an estimated area of over 1,203,200 acres, covered with luxuriant grasses and abundantly supplied with running water. An extensive district in the northeast has conditions especially favorable for stock-raising. Beef and dairy cattle, horses, and swine are reared. Large numbers of beef cattle are raised also on the island of Vieques. The principal draft animals used in Porto Rico are a superior breed of oxen especially adapted to the natural conditions that prevail in the country.

Minerals. The island has a varied abundance of mineral resources, but there are no established mining enterprises of record as such. The output of "quarry" operations, 1919, was $158,157, an increase of nearly 2,800 per cent in a decade. The mineral resources are capable of much greater development than they have yet received, and capital is being attracted to their development.

Valuable salt deposits are worked at Guanica, Salinas, and Cabo Rojo. Sulphides of copper, and magnetic oxides of iron, are found in large deposits. Placer gold is taken from the beds of many of the mountain streams, being recovered by primitive processes worked by the natives. Silver, bismuth, tin, mercury, nickel, and platinum are other metals found. Marble, lignite, and amber also occur, the two latter chiefly around Utuado and Moca. Clays of superior quality are plentiful. Bat guano is gathered in considerable quantities.

Manufactures. Although the number of manufacturing establishments in Porto Rico in 1919 was only 619, as compared with 939 in 1909, showing a falling-off of over 34 per cent, the total capital invested in manufacturing industries increased over 229 per cent during the same period, being $84,151,310 in 1919. Wage-earners, 1919, numbered 15,985, earning total wages of $6,765,604. The cost of raw materials used in 1919 was $59,827,274; and finished products put out were valued at $85,506,834—an increase of nearly 133 per cent over the total value produced in 1909.

Sugar factories accounted for two-thirds of the total manufactured production of the island in 1919. Other leading industries, named in order of value of output, were: coffee cleaning and polishing; cigars, cigarettes, and plug tobacco; bread and bakery products; foundry and machine shop products; printing and publishing; clothing; ice; boots and shoes; bay rum; mineral and soda waters; flour and grist. Among articles of native handiwork, the most important are straw hats, baskets, embroideries, drawn-work, and rush pack-saddles.

San Juan, the capital and chief city, with a population in 1920 of 71,443, is located on a narrow island off the north coast, and has the finest harbor on the entire seaboard. It contains the former "Palace" of the Spanish Captain-General, now used as the official residence of the Governor, and also has a great military hospital. Ponce (41,912), on the south coast, is a progressive city, seat of the Porto Rican Chamber of Commerce. Mayaguez (19,124), on west coast, is a great industrial town noted for its healthful conditions. Caguas (12,149) and Cayey (5,243), on the great military road, are the most important tobacco towns. Bayamon (10,411), Arecibo (10,039), Aguadilla (8,035), Guayama (8,924), and Humacao (6,183) are other important centers. The railway system has 339 miles in operation, chiefly skirting the north, west, and south coasts; and there are over 1,100 miles of highway.

Government. Executive power is vested in a Governor, assisted by an Executive Council comprising the heads of the various departments. Legislative powers are vested in a Legislature of two elective houses—a Senate and a House of Representatives. Under the "Organic Act" of Congress of 1917, known as the "Jones" act, Porto Ricans were granted United States citizenship. The voting age is 21, no property qualification being required. Porto Rico is represented in the United States Congress by a Resident Commissioner elected by the islanders for a four-year term.

Under American administration, education was made compulsory and the school system completely reorganized. As a result, illiteracy has been greatly reduced. In 1899, over 83 per cent of the population could neither read nor write; but by 1920 the percentage of illiterates had fallen to 55.5. In 1923, nearly 226,000 pupils were enrolled in the public schools. The University of Porto Rico, established at Rio Piedras, south of San Juan, is open to both sexes.

Roman Catholicism is the religion of the great majority of the people. Under Spanish rule, the island contained 71 cathedrals.

Historical. The island of Porto Rico was discovered and named by Columbus in 1493. It was invaded and conquered by the Spaniards under Ponce de Leon, in 1509-11. The natives, however, revolted under Spanish oppression, and were practically exterminated within a century, negroes being then imported as slaves. A three years' war for independence ended in defeat in 1823. In 1870, the island was granted representation in the Spanish Cortes, and, in 1873, slavery was abolished. While the Cuban struggle for independence was in progress, in 1897, Porto Rico was granted autonomous government under a Spanish Governor-General. Following the defeat of Spain in the Spanish-American War, 1898, the island was formally ceded to the United States.

CUBA

Area. The area of the island of Cuba is 41,634 square miles. Including the Isle of Pines (area 1,180 square miles) and the many hundreds of coral islets along the coasts, the total area of the Republic is 44,164 square miles.

Population.

Year	Population	Year	Population
1910	2,220,278	1920	2,899,000

1927 (est.) 3,579,507

Cuba is not only the largest, but it is the most populous of the West India islands.

The average density of population in 1923 was 71.9 per square mile, the greatest density in the Province of Habana (243.6 per square mile). Camagüey, the most sparsely settled province in the island, had only 23.6 inhabitants per square mile.

Almost 75 per cent of the population is white, a proportion greater than that of any other West Indian island. The negroes are most numerous in the Province of Oriente.

Religion. There is complete separation of Church and State, and liberalist tendencies are very pronounced. The Roman Catholic faith is the prevailing religion of the island.

Physical Features; Climate. Coast lands, especially in south, marshy. Elevated interior divided into two parts by marshy depression across east-central section. Broken ranges traverse interior, with principal mountains in southeast. The highest elevation is that of Pico Turquino, 8,320 feet. Western part diversified by low, forest-clad hills and gently sloping plains. Coast-line over 2,000 miles, with fringe of coral reefs and islets. Although Cuba has a generally tropical and equable climate, the higher elevations of the interior experience wide range of temperature, the freezing point being often reached in winter. The high temperatures on the coast are made oppressive by the humidity, which is, however, not excessive for a tropical country. As the easterly trade winds prevail, the rainfall is greatest in the northeastern section, the wet season occurring from May to October. The island is periodically subject to hurricanes in autumn.

Government. Cuba became a Republic on May 20, 1902, when the control of the island was formally transferred from the suzerainty of the United States to the newly-elected Cuban Government. The island, formerly a Spanish possession, was relinquished to the United States, by the treaty of December 10, 1898, at the conclusion of the Spanish-American War. In 1901, a republican form of government was established, after a treaty had been signed granting certain rights and concessions to the United States.

In August, 1906, a provisional government was established by a United States Commission after political disturbances had broken out; and this rule continued until January 24, 1909, when the Cuban Government resumed control after the institution of electoral reforms.

The constitution, adopted February 21, 1901, provides for a President and Vice-President (elected for four-year term), and a Congress of two houses. The President is assisted by a Cabinet of nine Secretaries of the various departments of the administration. The Senate is composed of four members from each of the six provinces; and the House of Representatives is made up of one member for every 25,000 inhabitants.

Cuba is divided into six provinces:

Habana
Pinar del Rio
Matanzas
Santa Clara
Camagüey
Oriente

Each province is administered by a provincial governor and a popular assembly with limited powers. The municipality, a subdivision of the province, is the chief political and administrative civil division, and includes both urban and rural territory. The municipalities are administered by mayors (alcaldes) and assemblies elected by the people.

Education. During United States military rule in Cuba (1899-1902), the educational system was reorganized and school attendance made compulsory. Illiteracy has, in consequence, been reduced very greatly, and at the end of 1924, the public schools had about 272,892 pupils and 5,970 teachers, while 28,480 pupils attended private schools. Many institutions and colleges are provided for secondary instruction, and the University of Habana maintains higher education.

Industries and Resources. *Agriculture.* The bulk of the population of Cuba is engaged in agriculture, and this thriving industry makes the island one of the most advanced tropical countries in the world. Although volcanic disturbances and coral growth played some part in the original formation of the island, the rock is now covered with alluvial soil, which, with the favorable climate, facilitates agricultural production.

Considerably over one-fifth of the world's supply of cane sugar is obtained from Cuba. In 1924 the sugar crop was 4,112,699 tons; exported, 1923, $368,302,000 worth, chiefly to the United States. The principal sugar-producing regions are in the Cienfuegos, Cardeñas, Habana, Matanzas, and Sagua la Grande districts.

Cuban tobacco is the choicest that is cultivated, and it is very largely exported in both raw and manufactured state. It is grown to best advantage in Pinar del Rio, on the southern slopes of the Sierra de los Organos; also in Habana, Santiago de las Vegas, and Bejucal. The normal crop is about 75,000,000 pounds.

Coffee is one of the leading crops of Cuba, and is best cultivated in the Province of Oriente. Cocoa, cereals, and potatoes are other crops of importance. A large export trade in fruits is carried on, principally pineapples, citrus fruits, and bananas. The tamarind grows everywhere; mangoes, though exotic, are extremely common; and pomegranates are as generally used in Cuba as apples in the United States.

Cattle are raised everywhere throughout the island. Luxuriant grasses, and the savannas of central Cuba, afford excellent pasturage. Sisal hemp is the best known fiber plant.

Forests. The forests of Cuba are not only extensive, but provide many valuable cabinet woods and general forest products. Mahogany, ebony, and lignum-vitae are exported; cedar is used in the manufacture of cigar boxes; and many other hardwoods are used on the railroads, for farm implements, etc. Dyewoods, fibers, gums, resins, and oils are also produced in abundance. The royal palm is the most characteristic tree of the island, every portion from the root to the leaves serving some useful purpose.

Fisheries. Food fishes are relatively not abundant, but the sponge fisheries provide a livelihood for many of the people, especially in Batabano and Caibarien. Molluscs are extraordinarily numerous, and are noted for their size and richness of color.

Minerals. Mineral resources are fairly abundant, but not in sufficient quantity to be of very great industrial importance. Mining is carried on principally in the Province of Oriente, at eastern end of island. Copper is worked in the Cobre mines near Santiago, iron in Daiguiri and Nipe, and manganese in La Maya and Cristo. All of the iron ore, about 800,000 tons annually, is shipped to the United States. Although gold is known to exist, it is little worked, and the rich beds of asphalt near Mariel are only slightly developed. Bituminous products of great variety, from oils to lignite-like substances, occur in all parts of the island.

There are extensive and valuable deposits of beautiful marbles in the Isle of Pines, and lesser ones near Santiago. Limestone is the principal stone existing in Cuba, however. Clays of all qualities and colors abound.

Mineral waters are becoming extremely well known for their excellence; and many places in Cuba and the Isle of Pines are already popular as health resorts.

Manufactures. The many sugar mills (nearly 200) and the tobacco factories are the principal manufacturing industrial establishments of Cuba. In the tobacco industry, the manufacture of cigars is the principal form in which the leaf is manipulated.

Rum and whiskey are manufactured, and tanning, preserving of fruit, and a few old handicraft industries such as woodworking and the making of straw hats are carried on.

There are more than 3,000 miles of railway in operation, connecting all important towns and seaports. The principal cities are: Habana, the capital, on fortified harbor (population 562,968); Santiago de Cuba (76,906); Camagüey (93,145); Matanzas (44,167); Cárdenas (36,280); Marianao (30,701); Manzanillo (63,560); Sagua (17,487); Guanabacoa (16,352); Ciego de Avila (16,408); Guantanamo (53,004); Regla (14,489); Luyanó (14,439).

SOUTH AMERICA

Area. South America is the fourth largest of the continents. It is nearly twice the size of Europe, and comprises about 14 per cent of the land surface of the world.

Coast-line. The coast-line is in general regular, with few indentations. Its length, 15,700 miles, is only a fraction of that of the coastline of Europe. The most varied coast is in Southern Chile, where there are many fjords and narrow islands. In the Orinoco, Amazon, and La Plata deltas and in Guiana, the coast is generally flat and low; elsewhere it is usually steep, especially along the Pacific front, where approach is difficult and harbors are few.

Climate. The larger part of the continent lies in the Hot Belt, and has a tropical climate. The extreme southern tip extends into the Cold Cap, and is comparatively cold. Most of the continent, and particularly the windward (east) side of the high mountains receives a heavy rainfall. Where the mountains interpose a barrier to the winds, a dry area is formed on the far side. The heaviest rainfall is on the northwest and southwest coasts, and on the east slope of the Andes in the central part. The driest regions are on the west-central coast and in Patagonia.

Population. At the time of the discovery of South America by Europeans, the ancient native races inhabiting the continent differed greatly among themselves in customs, languages, and civilization. Through the invasion of the Spaniards, Portuguese, and other European races, and the importation of African blacks as slaves, these aboriginal peoples have been, except in a few localities, completely lost sight of. The Spaniards have imposed their language and many of their customs throughout the north and west; the Portuguese have been dominant in Brazil. The British, Dutch, Germans, and Italians have exercised little influence. The density of population is about 9.2 to the square mile, compared with 18.7 in North America, and 118 in Europe.

Topography. The surface of the continent of South America may be characterized as consisting of the Pacific cordillera, the Guiana and Brazilian highlands, and the central lowlands.

The Pacific cordillera, or Andean system, stretches from the southernmost tip in Tierra del Fuego, all through the western side of the continent to Panama and Venezuela. North of the continent, the submerged tops of the ranges form the West Indian Islands.

A narrow ridge of foothills extends along the base of the Pacific slope of the Andes between the Bay of Guayaquil and Coquimbo. This region is the most arid section of South America. In this strip of country are the Atacama Desert of northern Chile, the Pampa del Tamarugal, and the Piura Desert of Peru. The rainfall in this region is insignificant, and in the Atacama Desert is almost unknown. The country would be uninhabitable were it not for the streams that descend from the Andes, yielding water for irrigation.

The Andes form the mighty backbone of the South American continent. They rise almost abruptly from the Pacific, and by their trend determine the general outline of the coast. There are a great many active volcanoes, the largest being Cotopaxi, Maipo, and Sangay. The eastern slope of the Andes is far gentler and broader than the Pacific slope, and gradually merges into the flat interior plains. In Peru and Ecuador it is drenched with almost perpetual rains, and supports an exceedingly dense and luxuriant vegetation. Farther south the eastern slopes of the mountains become dry in proportion as the western slopes grow humid. Here, in marked contrast to the Pacific slopes of the cordillera, is a very thinly peopled region, almost undeveloped in its resources.

The eastern highlands are composed of two entirely distinct mountain regions—the Brazil and the Guiana highlands—separated by the Amazon valley. The Brazilian highland consists of broad plateaus or chapadaos, ranging from one to three thousand feet in elevation, surmounted by straggling mountain chains, and dissected by broad, fertile valleys. The higher slopes of these highlands are heavily wooded, as are also the valleys along the coast and in the south. The Guiana highlands are similar to the Brazil highlands, but of much smaller area. This region is almost wholly covered with dense forests and tropical vegetation. The central lowlands consist of the basins of the Orinoco, Amazon, and La Plata rivers, and of the Patagonia pampas region. Considerably more than two-thirds of the continent is comprised in this great lowland region, the area under 600 feet in elevation alone being 42 per cent of the total area of the continent.

The Patagonia pampas region lies south of Buenos Aires, and is largely a semi-arid, level prairie, excellent for grain growing and stock raising.

The La Plata basin consists of grassy plains (llanos), brush camps, and river forests. The greater part of this plain is known as the *Gran Chaco.* The Llanos de Chiquitos, an extensive region of open plains in Eastern Bolivia, connect the lowlands of the La Plata with those of the Amazon on the north.

The Amazon basin is the largest river basin in the world. Its greatest area consists of a low, wooded plain subject to inundations, and known as the Silvas of the Amazon. This great tropical rainforest has remained almost unpenetrated by white men to this day, and serves as a home only to small bands of savage Indians. Along the Rio Negro, tributary grassy llanos replace the dense jungle of the Amazon proper. Up to the Peruvian border, the Amazon is a network of interbraided channels and mud flats.

The Orinoco valley lies between the Sierra Mérida of the Cordilleran system and the Guiana highlands, and is the northernmost part of the central lowlands. The lower part of the valley is heavily forested; the upper valley is grass land, providing extensive and excellent pasturage for herds of live stock.

The lakes of South America are mostly mountain lakes of the Andes, the other bodies of water, in general, being either closed coastal bays of the sea, or phases of river development in the flood plains of the great rivers. Lake Titicaca, on the Bolivia-Peru border, is the largest lake on the continent (area 3,261 square miles). In respect to elevation and position, it is the most remarkable lake of its size in the world, as its surface is no less than 12,545 feet above sea-level. Lake Junin in Peru has an area of 200 square miles at an altitude of 13,380 feet. Along the eastern base of the Andes in southern Argentina, is a series of lakes which were probably formed by glaciers.

Resources. *Agriculture:* The great bulk of agricultural products are tropical or semi-tropical. Coffee, sugar, cacao, coca, tobacco, and cotton are produced in the northern three-fourths of the great continent. In a few scattered localities, comparatively insignificant, the high altitudes bring the vegetation of the more temperate regions. Toward the south where the climate becomes cooler, the general lack of rainfall is inimical to agriculture, and the cultivation of the grains of temperate regions is not very extensively pursued when compared with the production of the temperate regions in other continents.

These areas, however, are fitted for stock raising, and vast numbers of cattle are pastured on the plains of Argentina, which is one of the great sources of the world's supply of wool, and which also largely supplies the British markets with fresh meat in the shape of frozen beef and mutton.

Forests. The great tropical forests of the South American continent are vastly rich in their supply of such products as rubber, dyewoods, valuable timbers, and medicinal plants, nuts, copra, and fruits. Inimical climatic conditions and lack of transportation facilities have limited development of these resources.

Minerals. The Andes are one of the world's richest mineral fields. Gold and silver are found in all the highland regions. Diamonds are recovered in Brazil and Bolivia. Rich emerald mines are located in Colombia, which also ranks next to Russia as a source of world supply of platinum. In northern Chile and southern Peru, in the Atacama and Piura Deserts, are great beds of nitrate, which have accumulated because of the aridity of the climate. This nitrate provides one of the world's most valuable agricultural fertilizers. The copper mines of Chile are of great importance; and petroleum is abundant in Peru, Colombia, Ecuador, and Venezuela, the last-named having also rich asphalt deposits. Bolivia ranks next to Malaya in tin. Other important minerals are iron, bismuth, zinc, mercury, wolfram, nickel, antimony, lead, coal, salt, borax.

Difficulties of transportation, and the excessive heat and humidity characteristic of certain parts of the continent, have retarded mining development in South America.

VENEZUELA

Area. The Republic of Venezuela stretches along the Caribbean coast of northern South America, between British Guiana on the east and Colombia on the west, and is bounded on the south by Brazil. It has an area of 393,874 square miles, and comprises twenty States and two Territories, besides the Federal District containing the capital city of Carácas.

Population. An official estimate placed the population on January 1, 1925, at 3,026,876, although the official census of 1920 numbered only 2,411,952. About one-seventh of the people are native Indians, of whom about three-fourths are civilized. Roman Catholicism is the state religion, but other creeds are tolerated.

Physical Features. The topographical features of Venezuela, in general terms, may be said to comprise a mountainous section in the northwest; a central region of broad, grassy plains in the Orinoco valley; and, in the southeast, a vast, densely forested, mountainous area. In the northwest, the Andes Mountains extend into Venezuela, from Colombia, in two chains—one running north to the Goajira Peninsula; the other, known as the Sierra de Mérida, running northeastward, sending off a spur to the north (east of Lake Maracaibo), and finally, near the Caribbean, merging into the coast range of the Silla (Saddle) de Carácas. The Sierra de Mérida contains the loftiest peaks in the Republic, several rising above the snow-line; the peaks of Coluna and Concha each attain about 15,400 feet elevation. The land plateau inclosed by these lofty ramparts averages over 11,000 feet above sea-level, and is largely a desolate tract with Arctic climate.

Practically the entire southern border is a continuous series of mountain ranges (the Sierra Parima, Sierra Pacaraima, etc.) of lower altitude than the Sierra de Mérida, culminating in the northeast in Mount Roraima (8,600 feet) on the British Guiana frontier. North of these border ranges, up to the plains of the Orinoco valley, the country is a region of mountainous uplifts of moderate elevation.

The Orinoco, which has its entire course in Venezuela territory, is one of the great rivers of the world, being exceeded in volume, in South America, only by the Amazon and the Paraná. Rising in the Sierra Parima in the southeast, it flows at first northwestward to the Colombian border, where it turns abruptly north, and continues northward to its confluence with the Apure River near Caicara, whence it flows eastward to the Atlantic. It is navigable to Caicara. In the lower course of the Orinoco is a vast delta, which begins about 130 miles from the mouth of the river and has a total ocean frontage of about 430 miles.

Between the two great forks of the Andes Mountains in the northwest, is Lake Maracaibo, connected by a very narrow channel with the Gulf of Venezuela. This lake is 500 feet deep, and is the largest lake in South America, having an area of about 9,000 square miles. It is so landlocked that its tides are hardly perceptible.

Climate. Like other South American tropical countries, Venezuela has a climate dependent upon elevation rather than upon latitude. The hot zone, with a mean annual temperature of 77°, extends up to an elevation of about 3,000 feet. On the coast, the mean is 84°; at Carácas (elevation 3,018 feet), it is 77°; at Mérida, 59°. Above the hot zone, to a height of about 6,600 feet, is a belt with an average temperature of about 65°, ranging from subtropical to temperate, the coldest months being December and January; the warmest, April and May.

Rainfall is variable, being heaviest on the low, heated coast areas; while on the upland slopes, under the trade winds, it is abundant but not excessive. Practically there are only two seasons—the wet, including the months corresponding to our northern summer, May to November, and the dry, corresponding to our winter.

Industries and Resources. *Agriculture.* Although minerals are interesting an increasing proportion of the people of Venezuela, agriculture takes rank as the leading industry. It employs about one-fifth of all the people.

Coffee is the leading agricultural product. Coffee estates number about 25,000, and nearly 500,000 acres are devoted to cultivation of the shrub. The coffee exported averages annually well over 100 million pounds. Cacao, grown in the lowlands, is next to coffee in importance. Exported cacao in 1923 was valued at $4,589,000. The annual exportation of cane sugar averages 15,000 tons. Rice, maize, wheat, barley, beans, potatoes, and other vegetables, tobacco, and a little cotton of inferior quality are also grown.

Stock-raising monopolizes attention in the great pastoral regions of the llanos, but could be developed to much greater proportions. The stock comprises cattle, sheep, goats, horses, mules, asses, and pigs. Cattle and hides are important items in the export trade.

Forests. Nearly one-half of the area of the Republic is covered with equatorial forests, which are thickest on the slopes of the southern mountains, in the central valleys, in the delta of the Orinoco, and in the basin of Lake Maracaibo. Many of the trees are of great commercial value, yielding rubber, valuable timber, beautiful cabinet woods, dyewoods, copal and other gums and resins, tonka-beans, and medicinal products such as cinchona, copaiba, and sarsaparilla. Numerous varieties of the useful palm family abound.

Fisheries. Pearl-fishing, which is carried on around the islands off the coast, employs a considerable number of people.

Minerals. For many years, gold, copper, silver, iron, asphalt, petroleum, salt, and coal have been profitably worked in Venezuela, and in view of the present (1926) increasing world shortage in fuel oil, much attention is being directed to the Venezuelan oil fields as a possible great source of world supply of petroleum. The principal known fields lie in the Caribbean district, around Lake Maracaibo, in the Orinoco River delta, and in connection with asphalt deposits, of which the chief is the Bermudez Lake, near the mouth of the San Juan River. Production of petroleum in the last few years has made remarkable strides. In 1919, 166,000 barrels were produced; in 1922, 2,201,000 barrels; in 1924, 4,483,000 barrels; and it is estimated that 9,500,000 barrels were produced in 1925.

Gold is found chiefly in the State of Bolivar, on the Guiana frontier, the output in 1919 being 29,025 ounces. Silver to the amount of 4,100 ounces was produced the same year. Asphalt in large quantities is taken from Lake Bermudez, 33,321 tons being shipped to the United States in 1923. The Bermudez Asphalt Lake is about 1,000 acres in extent, being larger in area than the famous lake on the British island of Trinidad, but much shallower. Copper mines are numerous, and there are deposits of tin, jet, etc.

Manufactures. The principal manufactured products are cotton textiles and coarse fiber sacks. Cotton mills, 1920, numbered four. The preparation of salt for market, and the manufacture of matches, are government monopolies.

Commerce is chiefly with the United States, which furnishes about half of the imports and buys about one-third the exports. In recent years the imports from the United States have fallen off, and those from European countries increased. Total imports in 1923 equaled nearly $30,000,000, and exports slightly over $30,000,000.

Carácas, the capital, built at an elevation of 3,018 feet on the slope of the Silla Range, was founded 1567, and had 135,253 inhabitants in 1925. Here are the National University, National Library, and public statues of Simon Bolivar, who founded Venezuelan independence, and of George Washington. The seaport, La Guaira (21,450), is two miles distant by air line, but 23 miles by the winding railway down the slopes.

Government. Executive power is vested in a President, who is elected by the Congress for a seven-year term and assisted by a Cabinet; legislative, in a Congress of two elected houses. Primary education is free and compulsory; and great stress is laid on the practical arts, laboratories being established in all grades of schools.

Historical. Venezuela was discovered by Columbus, 1498, and settled by the Spaniards. Spanish dominion continued until a series of insurrections, 1806-22, resulted in Venezuela entering the Colombian Confederation. The Republic of Venezuela was proclaimed in 1830. In October, 1899, a boundary dispute with British Guiana, which involved control over 60,000 square miles of teritory, and which had been the occasion of President Cleveland's "Venezuela Message" to the United States Congress, was settled by arbitration. The British claims were in the main sustained, but Venezuela retained the gold fields of Yuruari and control of the mouth of the Orinoco River. Revolutions have wrought many changes in political administration, and hindered development of the country.

EMERALD LAKE, BRITISH COLUMBIA, CANADA

Copyright, Detroit Photographic Co.

FROM PINE TO PALM

Every year thousands of tourists from the United States visit the beautiful province of British Columbia for a season of recreation, or traverse it on their way to or from the Pacific Coast. Its surface is largely mountainous, having the main ridge of the Rockies on its eastern border and the Coast or Cascade Mountains in the west, while smaller ranges—the Gold, Cariboo, and Selkirk—lie between.

The Canadian Rockies are wilder, bolder, more rugged than our own, and the scenery is consequently more alpine in character. Among the lower slopes, whose surface is largely timbered, numerous lakes lie scattered like gems flung from a giant hand, and sparkling or grave beneath the changing sky. One of the most beautiful of these is Emerald Lake, surrounded by forests primeval and guarded at a distance by towering peaks capped with snow.

The Dominion of Canada seems but little foreign, so like our own people, in many ways, are her inhabitants; but in the other great alien land of the Western Hemisphere — South America — conditions are very different. Brazil, larger than the United States if we except Alaska, has a population almost entirely Portuguese, Italian, and Negro, or a mixture of the three. Large numbers of the native Indians, too, still live in their own villages or as nomads. Brazil is almost wholly within the torrid zone, and the luxuriant and varied growth of her forests is in striking contrast to the austerity of the evergreen.

To-day the whole world looks to South America for trade, for she is an enormous country of undeveloped resources. On the Atlantic Coast are superb harbors, admitting the largest ships afloat. Brazil's capital, Rio de Janeiro, is magnificently situated on a mountain-bordered bay and is one of the most imposing waterfront cities of the world. In All-Saints Bay, discovered by Americus Vespucius in 1503, the largest fleet may ride in safety. At the entrance to the bay, on a point between bay and ocean, is São Salvador, or Bahia, founded in the fourteenth century. The old town on the river level and the newer part on the higher land, 200 to 270 feet above, are connected by hydraulic elevators and steep, winding streets. Like most old cities it is extremely picturesque and interesting to travelers, and is destined to become increasingly so as commerce and other mutual interests unite the two continents more closely.

Courtesy of the Pan-American Union

SÃO SALVADOR (BAHIA), ONE OF THE COAST CITIES OF BRAZIL, SOUTH AMERICA

COLOMBIA

Area. The Republic of the United States of Colombia, which occupies the extreme northwest of the South American continent, adjoining the Isthmus of Panama, has an area estimated at 461,606 square miles. A considerable section at the southern extremity of the Republic is claimed by Peru. The Peruvian claim embraces a broad strip along both sides of the Putumayo River, a tributary of the upper Amazon, and also extends over a considerable area in eastern Ecuador, including a strip along the north bank of the Napo River, which is also a tributary of the upper Amazon. This Peruvian claim to an extended territorial jurisdiction leaves the question of the mutual boundaries between Colombia and her neighbors (Peru and Brazil) still a matter of dispute.

Population. The census population of Colombia is figured at 7,825,000.

Physical Features. The western part of Colombia is traversed north and south by three ranges of the Andes Mountains. The peak of highest elevation is Mount Tolima, which has an altitude of about 18,432 feet. East of the mountains, the surface of the country slopes gradually down to the valleys of the Orinoco (toward the northeast) and the Amazon (toward the southeast). On the east, the Orinoco River itself forms part of the boundary with Venezuela, its principal tributary streams in Colombia being the Meta and Guaviare rivers. The most southerly portion of the boundary between Colombia and Venezuela is formed by the Rio Negro, a tributary of the Amazon. The Amazon also receives the waters of the Caqueta and Putumayo rivers draining the southeastern portion of Colombia.

The principal river of western Colombia is the Magdalena, which is navigable 900 miles from its mouth. This great river, with its tributary, the Cauca, flows northward, draining the two great intermountain valleys of the Andean system, and empties into the Caribbean Sea near Barranquilla.

The Colombian coast-line has but few good natural harbors, the greatest indentation being the Gulf of Darien, near the Panama border.

Climate. The country lies wholly within the Torrid Zone, and temperatures are generally high, except where moderated by high altitudes (as in the western portion), by the northeast trade winds, or by the cold ocean current off the west coast. The warmest regions are along the Caribbean Sea, in the Magdalena Valley, and on the eastern Andean slopes and the llanos. On the elevated plateaus the temperature is moderate, but the climate in the low, hot, swampy lands is very unhealthful.

The annual rainfall, on the whole, is heavy. Alternate wet and dry seasons prevail in most parts of the country, but in some regions affected by the mountains, there are permanently dry areas, while in others the rain is almost continuous. On the west coast, the precipitation is 73 inches, resulting in swamps and tangled forest jungles except in a few favored regions.

In the highland plateau sections, however, the climate is moderate, and here are centered the white population and the productive industries. At Bogotá, at an altitude of 8,600 feet, the mean temperature is 57.9°, and the rainfall 43.62 inches. At Honda, in the Magdalena valley, elevation 664 feet, the thermometer averages 82° throughout the year.

Industries and Resources. *Agriculture:* Although much of the soil of Colombia is extremely fertile, only a small part is under cultivation. The lack of adequate transportation facilities has considerably retarded the agricultural development of the country.

Coffee is the great staple agricultural product, Colombia exporting over $25,000,000 worth in 1922, of which over two-thirds went to the United States. Other important crops are bananas, cacao, tobacco, sugar, maize, cotton, and wheat. Bananas to the value of $3,425,290 were exported in 1922.

The live-stock industry has attained considerable proportions, and cattle, horses, swine, and sheep are extensively raised. Hides to the value of $2,458,211 were exported in 1922.

Forests. Colombia has extensive forests yielding many valuable products. The rubber tree grows wild, and rubber is an important item of export. Cedar, dyewoods, and copaiba trees are abundant in the Magdalena valley. Cinchona (Peruvian bark), from which quinine is obtained, was first studied in Colombia, in 1793. Other important forest products are tolu balsam, balsam copaiba, ivory nuts (vegetable ivory), and coca.

Fisheries. The inland waters are well stocked with fish much prized by the natives for food. Pearl fisheries off the coast are a government monopoly, and an important source of revenue.

Minerals. Colombia is wonderfully rich in minerals, which rank as the most important of her resources. For many years she has been, with Russia, the main source of the world's supply of platinum. Colombia's output of this metal is about 35,000 troy ounces annually, the export being valued around $1,300,000. Gold is found in all departments of the Republic, and silver is abundant. The gold output, 1922, was 290,251 ounces, and the silver, 500,000 ounces. Rich emerald mines, located chiefly at Muzo and Coscuez, are worked as a government monopoly, yielding annually stones worth about $1,000,000 and constituting nearly all the world's supply of emeralds. Salt mines north of Bogotá are also owned by the Government, and are a great revenue-producer. Coal and petroleum deposits are extensive. Other minerals produced are copper, lead, mercury (cinnabar), manganese, iron, limestone, and fire clay.

Manufactures. The manufacturing industries of Colombia are advancing. One of the characteristic industries is the making of "Panama Hats," which are woven from the straw, paja toquilla. About 86 per cent of all the hats made are shipped to the United States.

Large blast furnaces, iron and steel rolling-mills, and foundries and machine shops are located in the rich mineral district around Bogotá, making pig iron, wrought iron, rails, machinery, castings, etc. Other manufacturing establishments are glass factories, shoe factories, textile mills, breweries, flour mills, etc. Commerce is chiefly with the United States.

Bogotá, the capital, is an inland city built at an elevation of 8,600 feet above sea-level, on the slopes of the most easterly of the three ranges of the Andes system. It lies in the heart of a rich agricultural and mineral region, and is considered one of the most beautiful of the world's cities. The population is 166,148.

The principal commercial towns are: Barranquilla (population 90,000), near the mouth of the Magdalena River, connected by rail with the coast at Puerto Colombia, 17 miles distant; Cartagena (70,000), seaport on the Caribbean coast; Bucaramanga (30,266) and Cúcuta (40,151), coffee centers; and Medellin (110,000), a mining center.

There are about 1,054 miles of railway in operation, and the government telegraph system has 13,708 miles of line.

Government. Executive power is vested in a President popularly elected for a four-year term and not immediately eligible for re-election. Legislative power rests with a Congress of two houses—a Senate, whose members are indirectly elected for a four-year term, by a vote of electors specially chosen for that purpose, and a House of Representatives elected for a two-year term by direct popular vote.

The public primary schools are gratuitous, but attendance is not compulsory. Public secondary schools are conducted mainly by Catholic bodies. There are several normal schools, schools of arts and trades, universities, and a National School of Mines. Roman Catholicism is the national religion, but tolerance is extended to other forms of worship, provided they resort to nothing contrary to law or to Christian morals.

Historical. Colombia was first settled by Spaniards. It became a Spanish dependency in 1563, but won independence in 1819. For about ten years, it was united with Venezuela and Ecuador in "Greater Colombia", but withdrew as the "Republic of New Granada," in 1832. The name "Granadine Confederation," embracing 8 states, was adopted in 1858, but this was changed in 1863 to "United States of Colombia," of which the former "States" are now "Departments." The Department of Panama revolted and became an independent republic in 1903. As compensation to Colombia for the loss of Panama, which was at once confirmed by the recognition accorded the new republic by the United States, and later by this country's acquisition of the Canal Zone and American rights therein, the United States, in April, 1921, agreed to pay Colombia the sum of $25,000,000.

PERU

Area. The area of Peru, not including the territory claimed by Peru in Ecuador and Colombia, is 532,047 square miles.

Population. The population is about 5,550,000, besides many uncivilized Indians whose numbers are not even approximately known.

Physical Features. Peru consists, in the main, of an elevated plateau traversed by three chains of the Andes Mountains. Along the coast, lies a strip of land about twenty miles wide, comprising the greater part of the arid zone of western South America. In the southwest are several quiescent volcanoes, some over 20,000 feet in altitude. The highest peak in Peru is Mount Huascan, 22,051 feet. East of the Andes lies the Montaña region, comprising the densely wooded slopes merging into the Amazonian plain.

Only a few short, rapid streams flow into the Pacific. All the important rivers are headwaters of the great Amazon, which has its main source in Lake Lauricocha, on the western slope of the central Cordillera in Peru. Until it reaches the Brazilian border, the Amazon is known as the Marañon.

The central plateau contains many lakes, including the western portion of the famous Lake Titicaca, described elsewhere in connection with the physical features of Bolivia.

Climate. Rain seldom falls on the Peruvian coast; but the climate is not unhealthful. Many of the valleys of the Cordilleras and the slopes of the Montaña region are wet and hot. The mean annual temperature at Lima, near the coast, is about 70°, ranging from 56° in winter, to 84° in summer; at Cuzco (11,400 feet elevation), 59°.

Industries and Resources. *Agriculture.* The leading agricultural products of Peru are sugar, cotton, coffee, cacao, tobacco, and rice. The principal coffee-growing districts are in Central Peru. The coastal region, where irrigation is extensively practiced, is the chief sugar district. In the Sierra region, all the products of the temperate zone are raised. Cuzco valley is the most important cacao-growing section. Live stock are extensively reared, the principal wool-bearing animals being the alpaca, sheep, and llama.

Forests. Luxuriant tropical forests providing valuable cabinet and medicinal woods cover the eastern slopes, in the Montaña region. Rubber and cinchona are prominent forest products, the latter being known as "Peruvian bark," from which quinine is extracted. Rubber is shipped down the Amazon from Iquitos.

Minerals. Mineral wealth is abundant, the total output in 1923 being valued at over $57,000,000 nearly half of which was petroleum, and one-fourth copper. Over 2,000,000 ounces of silver and over 121,788 ounces of gold were mined in 1923, besides $800,000 worth of coal. About 90 per cent of the world's supply of vanadium comes from Peru. Tungsten, lead, salt, borates, antimony, molybdenum and mercury are also produced. The extraction of guano is regulated by the government, and but 80,500 tons were exported in 1919.

Manufactures. The chief manufactured products of Peru are coarse cottons, woolens, flour, leather, fine cloaks and blankets, Panama hats (for which straw is largely imported from Ecuador), and gold and silver jewelry. Olive oil, cottonseed oil, cocaine, and distilled liquors are extensively produced.

Commerce is chiefly with the United States, which in 1924 furnished nearly half of what Peru purchased abroad, and bought over a third of what that country had to sell.

Lima (population 220,000), the capital and chief commercial city, lies in the valley of the Rimac River, six miles from its seaport, Callao (65,000), which is the chief port of the country.

Government. Executive power is vested in a President elected for five years, assisted by a Cabinet responsible to him; legislative, in a Senate and a Chamber of Deputies, both elected by direct popular vote. Roman Catholicism is the state religion, but political and religious liberty are granted to all. Attendance at primary schools is nominally compulsory. There are four universities, of which the central one, at Lima, is the oldest in America.

Historical. Under the Incas and their predecessors, civilization was highly developed. The country was conquered by the Spaniards, 1533-34, and, as a viceroyalty of Spain, became in 1544 center of government for all South America. It declared its independence 1821, and Spain was finally defeated 1824. Peru lost territory to Chile in war, 1879-84.

ECUADOR

Area. Ecuador has an area of about 118,596 square miles. The territorial claims of Peru extend northward over the southeastern portion of the Republic, and cover a part of Southern Colombia. The Galapagos Islands, about 550 miles off the coast, were occupied in 1832; area 2,868 square miles (population, 400).

Population. In 1903, the population was 1,328,821. It is estimated at 2,000,000, mainly Indians. People of mixed races number about 400,000.

Physical Features. The western part is traversed north and south by the Andes Mountains, the main range containing some of the loftiest peaks, including Chimborazo (20,696 feet). Farther east is a line of volcanoes culminating in the peak of Cotopaxi (19,493 feet).

On the Pacific slope, the principal rivers are the Esmeraldas, which rises in the Quito basin, and the Guayas, flowing south into the Gulf of Guayaquil. The Guayas drains about 13,000 square miles, and is the largest South American stream emptying into the Pacific. Eastern Ecuador is wholly drained into the Amazon valley, chiefly through the Napo and Pastaza rivers.

Climate. The highlands of Western Ecuador enjoy a climate healthful and of moderate temperature, even along the equator. The hot, rainy season is from December to May. Rainfall is almost constant on eastern slopes of Andes. The mean annual temperature at Quito is 55.6°; at Esmeraldas, on coast, 82°.

Industries and Resources. *Agriculture.* The most important agricultural crop of Ecuador is cacao, over 54,694,800 pounds of cocoa beans being produced in 1923. The output of coffee is about 30,000,000 pounds annually; of ivory nuts, used chiefly for manufacture of buttons, 50,000,000 pounds; of rubber, 1,200,000 pounds. Sugar, tobacco, bananas, rice, and some cotton are also cultivated. On the uplands, cereals and vegetables of temperate zone are grown. Live stock are extensively raised, and hides exported.

Forests. Equatorial forests affording timber, dyewoods, gums, resins, extracts, and rubber, cover 90,000 square miles, chiefly in east and north. One of the characteristic woods is quipe, very buoyant, used as a substitute for cork. Another unique product is kapok, a strong fiber obtained from the silk cotton tree, and from which valuable waterproof fabrics are made.

Minerals. The Republic has rich resources in gold, mercury, copper, iron, lead, and coal, and there are large deposits of sulphur. Silver and petroleum also exist, and emeralds are found.

Manufactures. The leading manufactured product of Ecuador is the "Panama" hat, the output of which cannot adequately meet the demand. The hats are woven under carefully regulated conditions of moisture, from the straw called "paja toquilla."

Commerce is chiefly with the United States, which, in 1923, furnished over 43 per cent of Ecuador's imports, and purchased almost 45 per cent of Ecuador exports.

Guayaquil (population 94,000) is the chief seaport, and center of trade and manufacture. Quito (population 100,000), capital of the Republic, and ancient capital of the Incas, is noted for its position practically on the equator, but at an elevation of 9,350 feet, which gives it a temperate climate.

Government. Executive power is vested in a President elected for four years; legislative, in a Congress of two houses elected by adults who can read and write. Primary schools are free, and attendance compulsory. There are three universities. No religion is recognized by the State, but Roman Catholicism predominates, and freedom of worship is granted all creeds.

Historical. At the time of the Spanish conquest, 1533-34, the greater part of Ecuador was subject to the Incas of Peru. It was made part of the Spanish viceroyalty of Peru in 1542, but the Spanish rulers were finally expelled, and Ecuador entered the Colombian Confederation 1822-23. In 1830 it was proclaimed a separate Republic under its present name. The boundary with Colombia was settled by treaty, 1917; but that with Peru remains (1929) in dispute.

BRAZIL

Area. The area of Brazil, including the Acré Territory acquired by purchase from Bolivia in 1902, is 3,285,319 square miles.

Population.	Year	Population	Year	Population
	1900	17,318,556	1928 (est.)	37,350,000

The number of inhabitants per square mile is 9.3. Italian, Portuguese, and Spanish immigration has been the greatest. The white people, largely of Portuguese descent, with Italian, German, and Russian accessions, predominate in the south; the Indians in the north. Negroes are numerous in the eastern states.

Climate. With the exception of its three southern states, Brazil lies entirely within the torrid zone. The northwestern lowlands and plateaus, and most of the Coastal Plains have a high temperature throughout the year, with two distinctly marked seasons — the wet and the dry. In the central and southern highlands, the elevation produces a subtropical and temperate climate, while in the extreme south the four seasons of the temperate zone are distinct. The rainfall in the Amazon valley and in the interior is extremely heavy.

Religion. The people are almost universally Roman Catholic, but all forms of religion have equal privileges.

Government. The United States of Brazil is governed by a President, elected by the people for a term of four years, assisted by a National Congress of two houses elected by direct popular vote and acting with sanction of the President. The Senate consists of three members from each state and the Federal District, chosen for a term of nine years. The Chamber of Deputies is elected for three years, in a proportion not greater than one member to every 70,000 of population; but no state can have less than four representatives.

The Republic is divided into twenty states, the Federal District, and the Acré Territory. Each state has its administrative, legislative, and judicial authorities who are independent of the Federal Government. Municipalities and townships are state subdivisions.

Education. Instruction is compulsory only in some states, and a high percentage of the people are illiterate. In recent years reforms have brought about much progress in popular education.

Industries and Resources. *Agriculture* is the leading industry. Coffee is the greatest product, three-fourths of the world's supply coming from the states of São Paulo, Rio de Janeiro, Espirito Santo, and Minas Geraes. Over half of the world's coffee comes from São Paulo alone. The average crop is 12,000,000 bags of 60 kilograms (about 132 pounds) each. Sugar, another great product, is cultivated chiefly in Alagôas, Sergipe, Pernambuco, Bahia, and Rio de Janeiro. Tobacco is widely cultivated in Bahia, Espirito Santo, Minas Geraes, and Goyaz. Cotton is raised extensively in the Atlantic states, the crop averaging 20,000 tons a year, and maté, or Paraguay tea, used as a beverage by about 12,000,000 people in South America, is an important product. Cacao, one of the leading exports, is produced in the Amazon Valley. Rice cultivation is extensive, and silk culture is encouraged. Manioc provides a much used coarse flour.

Cattle breeding is important in the south, particularly in São Paulo, where vast numbers of cattle, horses, swine, and sheep are raised. Hides and leathers are heavily exported.

Forest Products. The forests of Brazil are of great value, although but little developed. India rubber is a very large item of export, 21,568 tons being shipped in 1924, produced chiefly in the Amazon valley. Nuts, vegetable waxes, palm fiber, rosewood, dyewoods, medicinal leaves, and resins are obtained.

Minerals are developed only to a fair extent, although the country is rich in gold and other precious metals. Diamonds, coal, and manganese ore are worked, and the major quantity of the world's supply of monazite comes from Brazil. Iron and copper ores, platinum, mica, and talc are also found.

Manufactures are progressing rapidly under a high protective tariff. Textile mills (chiefly cotton), sugar mills, flour mills, boot and shoe factories, and lumber mills are the leading establishments.

Defense. Military service in Brazil is compulsory. The army has a strength of 45,000 officers and men, and the navy comprises about 24 vessels, including two cruisers.

BRITISH GUIANA

Area. British Guiana has an area of 89,480 square miles.

Climate. The climate of all the Guianas is tropical, though in the higher altitudes in the interior, the heat is less extreme. The northeast trade winds bring a heavy rainfall to the interior highlands.

Population. The population of British Guiana, 1927, excluding about 9,100 aborigines, was about 306,844, mostly East Indians and negroes.

Religion. The Church of England and the Church of Scotland are both established. Grants-in-aid are given to other denominations.

Government. The colony includes the three settlements of Essequibo, Demerara, and Berbice, so named from the rivers, and is administered by a Governor, assisted by a Court of Policy and a Combined Court (of which the majority of members are elected by the registered voters), and by an Executive Council.

Education. Schools are supported by public grants, and secondary education is provided for both sexes.

Industries and Resources. *Agriculture.* Sugar cane and rice are the staple agricultural products. Others are cocoanuts, coffee, cacao, rubber, and limes. About 55,130 acres were under sugarcane in 1923. The live stock industry is important.

Forest Products. Timber, balata, rubber, and shingles are the principal products of the forests.

Minerals. Gold, diamonds, and bauxite are mined and exported.

Manufactures. The manufacture of sugar is the most important industry, though much rum, molasses, and cattle food called molascuit is also manufactured. Charcoal is an important product.

Georgetown, the capital, is a city of 57,416 people.

DUTCH GUIANA (SURINAM)

Area. The area is 54,291 square miles.

Population. The colony, 1927, had a population of 142,896, exclusive of uncivilized negroes and Indians in the forests.

Religion. There is complete religious liberty. Christians, Hindus, Mohammedans, and Jews are all represented.

Government. The administrative and executive authority of the colony is in the hands of a Governor, who is assisted by a Council and by an elected house of representatives, the "Colonial States."

Paramaribo (population 45,703) is the capital.

Education. About thirty per cent of the population is enrolled in the schools. Private schools outnumber the public schools.

Industries and Resources. *Agriculture.* Sugar cane, cacao, and coffee are cultivated on the larger plantations; and rice, bananas, and corn on the small farms and coast lands.

Forest Products. The forests are rich, but transportation of the products is very difficult.

Minerals. Gold output, 1922, mostly alluvial, was valued at $248,000.

Manufactures. Sugar, rum, and molasses are the chief products.

FRENCH GUIANA (CAYENNE)

Area. The area totals about 34,740 square miles.

Population. The population, 1926, was 47,341, exclusive of those in the penal settlement. Penal colony established 1885.

Religion. Most of the people are Roman Catholic.

Government. French Guiana is administered by a Governor, assisted by a Privy Council, a Council-General and Municipal Councils, and is represented by one deputy in the French Parliament.

Education. Schools, 1926, had 3,608 pupils.

Industries and Resources. *Agriculture.* Rice, corn, manioc, cacao, coffee, sugar cane, tobacco, yams, bananas, bread fruit, indigo, and gutta-percha are raised in small quantities. Some hides are exported.

Forests. Vegetation is very luxuriant. Hardwoods, gutta-percha, India rubber, vanilla, and many spices are abundant.

Minerals. The most important industry is placer gold-mining. Silver, iron, and phosphates are also worked.

Manufactures are represented by sugar mills, sawmills, distilleries, and brick works. Capital, Cayenne (13,936), the only seaport.

BOLIVIA

Area. The Republic of Bolivia has an area of 514,464 square miles. It has no sea-front, being inclosed on the north and east by Brazil, on the south by Paraguay and Argentina, and on the west by Chile and Peru. Its exact boundary with Paraguay, 1927, is unsettled, the dispute involving over 100,000 square miles of territory in the Chaco region between the Paraguay and Pilcomayo rivers.

Population. The population was estimated in 1927 at 3,464,945, about 50 per cent being Indians (of whom very few are civilized), about 12½ per cent whites, and the remainder chiefly negroes.

Physical Features. In the west is a mountainous region traversed by ranges of the Andes system, the tableland between them, 60 to 150 miles wide, constituting the loftiest and largest plateau in the Western Hemisphere. The eastern and northern parts of the Republic comprise the Montaña region, densely covered with tropical forests, sloping down from the Cordilleras to a vast, undulating plain merging into the Amazon basin toward the north, and with pampas toward the south merging into the Gran Chaco between the Paraguay and Pilcomayo rivers of the Rio de la Plata system.

From the northwestern border of Bolivia, the Andes run south in two ranges—one on the west, paralleling the Pacific coast; the other the Andes proper, on the east, with an average elevation of about 20,000 feet, culminating in the triple-crested Mount Illampu or Sorata (21,274 feet), Illimani (21,188 feet), and other peaks. Volcanoes are numerous, Mount Sajama, near the Chilean border, being 21,477 feet high.

The only important rivers are in the eastern section. They afford about 3,000 miles of waterway, usually navigable, and nearly all converge toward the basin of the Madeira River, making that stream one of the main affluents of the Amazon. The principal tributaries of the Madeira are the Madre de Dios, Beni, Mamore, Yacuma, Rio Grande, and Guapore. In the southeast, the Paraguay and Pilcomayo rivers cross the frontier, flowing southward to their Atlantic exit through the Rio de la Plata. Practically none of the drainage of Bolivia flows into the Pacific.

One of the wonders of the Andes Mountains is Lake Titicaca, nestling on the lofty plateau on the border between Bolivia and Peru. This lake lies at an elevation of 12,545 feet—the most elevated large lake of South America—and is about 120 miles long by 30 to 50 miles wide, and 925 feet deep. Its area is 3,261 square miles. The lake is connected by the River Desaguadero, with Lake Aullagas (Poopó) to the south, which has no visible outlet. Both lakes are supposed to discharge through subterranean channels into the Pacific.

Climate. As in other Andean regions within the tropics, climate in Bolivia ranges from tropical to arctic. On the hot, moist eastern slopes of the Cordilleras that merge into the wooded plains of the Amazon basin, the mean annual temperature, up to a height of about 2,500 feet, is about 74°; at 8,000 to 8,500 feet elevation, it drops to about 66°; and on the central tableland at 11,900 to 12,500 feet, it drops to 50°. The snow-line is reached at about 15,000 feet. At La Paz (12,250 feet), the average temperature for the year is 50°.

Dry and wet seasons alternate—the wet or summer season lasting from December to May; the dry or winter, from June to November. Most of the rain falls on the eastern side of the mountains. Frequent violent hail and thunder storms occur during the wet season.

Industries and Resources. *Agriculture:* About 5,000,000 acres of land are estimated to be under cultivation in Bolivia. Potatoes, coffee, cacao, and sugar-cane flourish in the valleys and plains of the east. In the temperate uplands, fruits, cereals, and vegetables are extensively cultivated, wheat, maize, barley, beans, and potatoes being grown chiefly for home consumption. A superior quality of cacao is produced. On the pampas and the uplands is abundant pasturage for the great herds of live stock.

Forests. The dense forests of the Montaña region abound in valuable cabinet woods and dyewoods—ebony, mahogany, rosewood, satinwood, cedar, wax, cork, and varieties of palms. Among the many medicinal plants are the cinchona tree (yielding Peruvian bark, from which quinine is extracted), jalap, coca, and sarsaparilla. In the northerly regions draining into the Amazon, valuable rubber forests occupy an estimated area of 40,500,000 acres, the trees being found scattered amongst other forest growth, especially along the rivers, in marshy ground or on land subject to periodical inundation. The annual rubber export is about 3,000 tons, Bolivia ranking next to Brazil as an exporter of rubber from South America.

Minerals. Bolivia is amazingly rich in minerals. Almost all the known metals are found. About one-fourth of the world's total supply of tin comes from Bolivia, which ranks next to the British Malay States as a producer. In 1922, over 53,237 tons of tin ore, valued at over $25,000,000, were exported. Silver is another metal contributing much to the wealth of Bolivia, the principal deposits being found in the Province of Potosi. In the year 1922, 18,677 metric tons of silver ore was exported. The export of copper ore was 34,549 tons, valued at over $2,500,000. Ores of tungsten, lead, antimony, bismuth, and zinc are also exported. Platinum is found. There are large deposits of salt, and petroleum fields have been located at different points.

Manufactures. Manufacturing industries in the Republic are comparatively few, being limited chiefly to the supply of local needs.

Commerce is chiefly with the United States, the United Kingdom, Chile, Peru, Argentine and France. The leading imports are provisions, hardware, machinery, liquors, textiles, clothing, and coal. The principal exports are silver, tin ore, copper ore, rubber, bismuth, lead ore, cocoa, tungsten ore, and hides.

As Bolivia has no seaports, the main channels of her foreign trade on the Pacific are through the ports of Arica and Antofagasta in Chile, and Mollendo in Peru, and, on the Atlantic, through the Brazilian river ports of Suarez on the Paraguay, Montes on the Guapore, and Villa Bella on the Madeira, the last-named port being 2,152 miles from Belem (Pará) at the mouth of the Amazon.

Sucre, a city of 30,200 inhabitants, is the present seat of administration of the Republic, the capital being recently changed from La Paz (109,750). The latter is the chief commercial city of Bolivia. It is built at an elevation of 12,250 feet above sea-level, on a plateau west of the great snow-covered peak of Illimani, and is reached by rail (shortest route, 274 miles) from Arica, Chile; or from Mollendo, Peru, by rail to Puno, thence by steamer across Lake Titicaca to Guaqui, and thence by rail, a total distance of 525 miles. A third route, from Antofagasta, Chile, covers a distance of 719 miles. Sucre, elevation 9,200 feet, on the upper Pilcomayo River, is center of a rich agricultural district, and near silver and platinum mines. Cochabamba (31,500), is capital of a rubber-producing province and has flour mills. Potosi (30,700) is near rich silver mines, and once controlled the money markets of the world. In the 17th century it had a population of 100,000 to 160,000, and was the largest city in the Western Hemisphere. With an elevation of 13,325 feet, it is the loftiest town in South America.

Government. Executive power is vested in a President elected for a four-year term; legislative, in a National Congress of two chambers, both elected by direct, universal suffrage. Primary schools are free, and attendance compulsory. There are numerous secondary and higher educational institutions, including normal schools, schools of arts, trades, and commerce, and two universities. Roman Catholicism is the state religion, but other forms of worship are permitted.

Historical. Bolivia formed part of the ancient Inca Empire, which passed under Spanish rule in the 16th century. The country was known as Upper Peru until 1825, when it achieved its independence, and its name was changed to Bolivia in honor of the Great Liberator, Simon Bolivar, who drafted its first republican constitution. Bolivia's interference in a civil war in Peru, in 1835, led to war with Chile, in which Bolivia was defeated 1839. In 1866, another war with Chile, over the guano beds of the Atacama Desert, was averted only by acceptance of the parallel of 24° S. lat. as the boundary between the two countries. Trouble arose again in 1878, when Bolivia allied herself with Peru against Chile, and, as a result of the war that followed, lost her entire Pacific sea-coast, including very valuable nitrate deposits. During the successful Congressional revolution of 1891 in Chile, against a dictatorship which had been set up in that Republic, Bolivia accorded recognition to the Congressional party, and, as a result, was granted by treaty the right to ship goods by way of Chilean ports without payment of transit duties. Chile's perpetual sovereignty over the annexed Bolivian coastal territory, however, was acknowledged.

URUGUAY

Area. The area of Uruguay is 72,153 square miles. Uruguay is roughly triangular in shape, with apex to the north, the east side facing Brazil; the west facing Argentina; and the base extending in a curve along the estuary of the Rio de la Plata. Uruguay is entirely in the temperate zone.

Population. In 1926 the population of the Republic was estimated at 1,762,451, of whom about 17 per cent were foreign-born, those of European blood being chiefly Italian and Spanish.

Physical Features. Topographically, Uruguay is rather a continuation of the mountain and plateau system of southwestern Brazil than part of the Argentina pampas formation. It has, however, no lofty mountains, the highest range, the Acegua, reaching in one peak an altitude of 2,036 feet.

Along the Atlantic, the coast region is low and sandy, with numerous lakes and extensive swamps dotting the plain. The valley of the Uruguay, also, is generally low, but along the Rio de la Plata the coast is high and rocky, and indented with wide bays. The interior of the country is, in general, an undulating, grassy plateau traversed by chains of hills luxuriantly covered with vegetation. These ranges are known as "cuchillas" (knives), but they have gently rounded summits, sometimes bare and rocky.

Uruguay has a magnificent system of waterways, including, besides many small streams, eleven rivers of considerable size. The principal rivers are the Rio de la Plata, the Uruguay, and the Rio Negro. The Rio de la Plata, formed by junction of the Uruguay and Paraná rivers, is really a great estuary extending along the southern border of the Republic 170 miles. It is a shallow, muddy stream 65 miles wide at Montevideo. With its tributaries, it drains most of Uruguay and Paraguay, besides large portions of Argentina, Brazil, and Bolivia—a total area of about 1,240,000 square miles. The Uruguay River, 931 miles long, rises in the mountains of southern Brazil, and forms the boundary between Uruguay and Argentina. Large vessels can ascend to Paysandú, 200 miles. The basin of the Rio Negro, chief tributary of the Uruguay, occupies the entire central portion of the Republic.

Climate. The climate of Uruguay as a whole is subtropical. In the maritime regions, it is equable, with moderate summer heat and mild winters. The mean annual temperature at Montevideo is 62°, ranging from 51.8° for July, to 73° for January. Rainfall averages 40 inches, but is very unevenly distributed.

Industries and Resources. *Agriculture:* The most characteristic feature of Uruguay is its vast extent of pasture lands. The rearing of cattle and sheep, and the preparation of animal products, are the leading industries. Sheep number about 11,500,000, and cattle 8,500,000. Farm crops on a large scale are raised only in the southern departments, the principal crops being wheat, oats, corn, barley, flaxseed, and tobacco. Olives and all fruits and vegetables of the temperate zone are successfully cultivated.

Forests. Stands of willow, poplar, mimosa, and bamboo are found along the rivers, and the ombu tree thrives where other trees will not take root.

Minerals. Gold mines are worked chiefly in the north, and silver, copper, lead, magnesium, coal, and semi-precious stones are found.

Manufactures. Preparation of animal products—jerked beef, frozen meat, beef extract, canned tongue, hides and skins, tallow, wool—is the chief manufacturing industry.

Montevideo (population, 1927, 429,993), the capital, is the chief commercial and industrial center.

Government. Executive power is divided between the President (4-year term) and the National Administrative Council, both elected by direct male suffrage. Legislative power rests with a Parliament of two houses—meeting annually—a Senate, chosen by an elected Electoral College, and a Chamber of Representatives. Primary education is compulsory. Higher institutions include a university at Montevideo. There is no State Church. Roman Catholicism prevails, and other creeds have complete religious liberty.

Historical. Uruguay was first settled by Spanish Jesuits in the 17th century. After a struggle, its independence was recognized 1828, and it was constituted a republic in 1830. In the forties, it was devastated by civil war for nine years, and has since been disturbed by a few minor revolutionary attempts.

PARAGUAY

Area. Excluding the area of Gran Chaco country between the Paraguay and Pilcomayo rivers, in dispute (1927) with Bolivia, the area of Paraguay would be about 61,647 square miles—the second smallest South American republic. It is entirely inland, being bounded on the south and west by Argentina, on the east by Brazil and Argentina, and on the north by Brazil and Bolivia. Area, including Gran Chaco claims, about 173,700 square miles.

Population. In 1928 the population of Paraguay was about 853,321 the inhabitants being largely of mixed race, descendants of Spaniards, Guarani Indians, and negroes.

Physical Features. The Paraguay River divides the Republic into two sections of different characteristics. Eastern Paraguay is an undulating plateau traversed by ranges of low hills. Western Paraguay is a low plain subject to periodical inundation.

Paraguay has two great rivers, the Paraná and the Paraguay. The Paraná forms the southern and southeastern boundary. It rises in Southern Brazil, and has a course of 2,000 miles to its junction with the Uruguay to form the Rio de la Plata. Small boats ascend to the confluence of the Paraguay. The Paraguay traverses the very heart of the country, and is navigable beyond its borders far into Brazil. It has a course of about 1,420 miles to its junction with the Paraná near Corrientes.

Climate. The climate of Paraguay is subtropical, but on the whole cooler and more healthful than in many other regions of the same latitude. The mean annual temperature is 75°. Rainfall is abundant, averaging about 60 inches, and being heaviest in August, September, and October.

Industries and Resources. *Agriculture:* In Paraguay, soil and climate are favorable to nearly all tropical and temperate-zone growths, and agriculture is the main source of wealth. A characteristic plant receiving much attention is yerba maté ("Paraguay tea"), of which over 10,000,000 pounds were exported in 1923, and which is used as a beverage by as many as 12 million people in South America. Tobacco is a large crop, and cotton, being indigenous, grows abundantly. Maize, manioc, sugar-cane, coffee, rice, beans, and other useful crops are also cultivated. Orange-growing is important, and bananas, grapes, and other fruits are abundant. Stock breeding, especially of cattle and horses, is extensively pursued.

Forests. Western Paraguay, occupying a portion of the Gran Chaco, consists mainly of swampy moorlands, diversified with dense forest growth and occasional stands of palm. In Eastern Paraguay, on the other hand, the forests are an important source of wealth. They contain many valuable hardwood and other timber trees, several species of dyewood, trees yielding resins and gums, as India rubber and varnish, and quebracho extract (for tanning).

Minerals. The minerals of Paraguay include rich deposits of iron and manganese, with some copper, but are little developed.

Manufactures. Meat-packing and preparation of hides, tallow, and other animal products, sugar refining, and the production of quebracho extract are well-established industries. Distillation of "oil of petit grain," from the leaves of the sour orange, is another important branch of manufacture, yielding about 118,000 pounds for export in 1923. Brick and pottery, leather, furniture, and liquors are made for home consumption. Lace-making is an important industry.

Asuncion (population, 113,684 in 1928), the capital, founded 1537, is seat of a cathedral.

Government. Executive power is vested in a President, elected for four years, and assisted by a Cabinet; legislative, in a Congress of two elected houses. Public schools are free, and attendance compulsory. Higher institutions, including a university, are maintained. The State Church is Roman Catholic, but other forms of worship are permitted.

Historical. Paraguay was settled by Spaniards, 1536-37. It declared itself an independent republic 1811, but was under rule of despotic dictators until the end of the disastrous 5-year war with Brazil, Argentina, and Uruguay in 1870, which left Paraguay prostrate. A new constitution was adopted and the government completely reorganized in 1870.

ARGENTINA

Area. The area of Argentina is estimated at 1,153,119 square miles, giving it rank next to Brazil in size among the republics of South America.

Population. Population, 1926, numbered 10,872,788, of whom about one-fourth were Italians, many with large industrial interests.

Physical Features. The greater part of the surface consists of grassy plains. In the center and east is the region of the pampas—vast, level, almost treeless expanses covered with tall grasses. North of the pampas are the plains of Entre Rios, between the Paraguay and Uruguay rivers, and those of the Gran Chaco, reaching to the western highlands and northward to Paraguay and Bolivia, diversified by minor mountain ranges.

The western part of Argentina merges into the Cordilleran system of the Andes, comprising two nearly parallel ranges, the western and loftier forming the greater part of the boundary with Chile. The culminating peak of the entire system, and the highest peak in South America, is the extinct volcano Mount Aconcagua (23,290 feet).

The three principal rivers of Northern Argentina are the Paraná, Paraguay, and Uruguay. The two latter are described in connection with the republics named after them respectively. The Paraná has a total length of about 2,000 miles. Rising in the mountains of Southern Brazil, it flows at first southwestward, curving westward around the southern end of Paraguay, to where it receives the Paraguay River, near Corrientes. From this point it is navigable to its mouth, flowing south to where it unites with the Uruguay to form the Rio de la Plata. The principal other affluents of the Rio de la Plata system in Argentina, are the Pilcomayo (part of the boundary with Paraguay and Bolivia), the Bermejo (which joins the Paraguay above Corrientes), and the Salado (which empties into the Paraná near Sante Fé). The great streams of the south are the Colorado and the Negro, both rising in the Andes, and flowing southeast into the Atlantic.

Argentine Patagonia lying south of 39° S. lat., is a region of high, undulating plateaus rising in successive terraces, and dissected by many valleys and ravines. It is largely covered with stunted bushes and herbs or coarse grass.

Climate. Except for a small tract in the extreme north, the Republic lies wholly in the temperate zone. In the north, the climate is oppressively hot; on the pampas, temperate, but subject to droughts; in the extreme south, cool. Rainfall in general decreases from north to south, and from east to west. At Buenos Aires, the mean annual temperature is 63°, ranging from 50° in July to 75.6° in January, and the average annual rainfall is 34 inches.

Industries and Resources. *Agriculture:* Pastoral and agricultural industries are the chief sources of wealth. In 1924 over 17,000,000 acres were devoted to wheat, the crop being 235,264,966 bushels. Other principal crops were: corn, 191,481,800 bushels; oats, 39,691,933 bushels; and flaxseed, over 47,546,600 bushels. Sugar, cotton, tobacco, and grapes are largely grown, and wine is made in large quantities.

Argentina is almost unrivaled as a grazing country, vast herds of beef and dairy cattle, sheep, horses, goats, and pigs being reared.

Forests. About 20 per cent of the area of the Republic is forest-covered, the main timber being in the Gran Chaco region. The Province of Santiago del Estero is almost wholly woodland. The principal trees are the Antarctic beech, Chilean "pehuen," apple, wax-palm, mimosa, quebracho, and "incense tree."

Minerals. Gold, silver, copper, tungsten ore, coal, and petroleum are worked, but the mining industry has been but little developed.

Manufactures. Argentina has made notable progress in manufactures. Sugar, liquors, flour, and animal products are the leading items. There are immense establishments engaged in slaughtering cattle and sheep for freezing, canning, and export. Most of the frozen beef and mutton is shipped to the British markets.

Buenos Aires (population, 1925, 2,310,441), the capital, is the chief commercial center, and largest South American city.

Government. Executive power is vested in a President, who is chosen for a six-year term by provincially appointed electors, and assisted by a Cabinet of eight Ministers. The President and Vice-President must be Roman Catholics, and Argentine by birth, and are not eligible to immediate re-election. Legislative power rests in a Congress of two elected houses. Primary education is free, secular, and compulsory. There is no state religion, but Roman Catholicism has state support, while all creeds have freedom of worship.

Historical. The Rio de la Plata was discovered, 1508, by Juan Diaz de Solis and Vicente Yanez Pinzón, and was explored by Sebastian Cabot, 1526. Buenos Aires was founded by Spaniards, 1535. The country was created a viceroyalty, 1776. Its independence was proclaimed, 1816. Argentina suffered under a dictatorship till a genuine republican constitution was adopted in 1853.

CHILE

Area. The Republic of Chile has an area of 290,084 square miles. Its extreme length is over 2,600 miles, and its width from 100 to 248 miles.

Population. The population, chiefly in central districts, was 4,004,014 on December 15, 1926, the majority of European origin.

Physical Features. The Andes Mountains, forming the eastern boundary, are the dominating natural feature. At the south, submerged outliers of the Andes form a remarkable fringe of coastal islands. In the north are saline pampas traversed by volcanic uplifts. Central Chile is diversified by well-watered plains and valleys, the lofty sierras throwing off to the west a succession of spurs which in this region extend to the sea. Southern Chile is a region of large lakes, islands, glaciers, and immense tracts of dense forest.

Climate. At the north, a tropical, dry climate prevails, rainfall being very slight as far south as Valparaiso. From there south to Tierra del Fuego, the prevailing westerly winds bring much rain, December to March. In Central Chile, climate is temperate. The mean annual temperature ranges from 74° in extreme north, to 42° in the south, being 57°, with rainfall of 13 inches, at Valparaiso.

Industries and Resources. *Agriculture:* Northern Chile is arid, but the central districts produce large crops of wheat (over 23 million bushels in 1923), barley, beans, oats, corn, peas, potatoes and other vegetables, fruits, and wine. Cattle, horses, sheep, goats, alpacas, and swine are reared in large numbers. Wool, hides, leather, and frozen meats are exported.

Forests. The forested area of Chile is estimated at 9,495,483 acres. It begins in the central region south of 35° S. lat., and reaches down to Cape Horn. There are said to be 200 varieties of trees.

Minerals. Minerals are the main source of wealth in Chile. They are found chiefly in the northern district, which has the largest nitrate deposits in the world. It is estimated that the Chilean nitrate deposits will supply the increasing nitrate demands for 100 years. There are also enormous deposits of borate, and guano is found along the coast. South of Valparaiso are extensive coal mines. Other minerals produced are: copper, silver, gold, iron, cobalt, manganese, salt, and sulphur.

Santiago (population, 1926, 587,875), the capital, is the largest city in western South America. Valparaiso (191,750).

Government. Executive power is vested in a President, elected for six years by direct vote of the people. The President is assisted by a Cabinet, and is not eligible for re-election. Legislative power rests with a popularly elected National Congress of two houses. Education is free, but not compulsory. There is no State Church, but Roman Catholicism prevails.

Historical. Chile formed part of the old Inca Empire of Peru. Spaniards invaded it in 1535, and Santiago was founded 1541. Independence was declared in 1810, and won in 1818. A republican constitution was adopted in 1833. As a result of the war of 1879-84 with Peru and Bolivia, Chile annexed the Peruvian Province of Tarapaca; acquired control also of the rich Peruvian nitrate fields of Tacna and Arica, and, by occupying Atacama, shut off Bolivia from the sea. Under the treaty which ended the war, a plebiscite was provided for, to decide by 1894 the final ownership of Tacna and Arica, but in 1922, a method of holding the vote was still undecided. Early in 1929 an official agreement was reached by which the boundary was fixed between the provinces of Tacna and Arica, Chile obtaining control of the latter.

EUROPE

Area. Europe is the smallest of the continents except Oceania. With an area of about 3,872,644 square miles, it is considerably less than half the size of North America, or a little larger than the United States and Mexico combined. Ranked according to size, the chief countries are: Union of Socialistic Soviet Republics, France, Spain, Germany, Sweden, Poland, Norway, Finland, Romania, Italy, Yugoslavia, Great Britain, Lithuania, Czechoslovakia, Hungary, Portugal, Bulgaria, Austria, Irish Free State, Greece, Latvia, Estonia, Denmark, Switzerland, Netherlands, Belgium, and Turkey. The coast-line, however, estimated at 26,760 miles, is longer than that of any other continent. Long seas and bays penetrate far inland, giving to most parts of Europe easy access to the sea.

Interesting changes are taking place in the coast-line. The eastern Baltic coast is slowly rising, the western is sinking. Much of the Italian coast is being submerged; several old Roman towns now lie beneath the water. On the other hand, the Po delta and the Rhône delta are rapidly building seaward.

Climate. The climate of Europe is determined largely by the prevailing westerly winds, which bring the warmth of the Atlantic waters to most parts of the continent. This circumstance counteracts the conditions usually attending the comparatively high latitude in which Europe lies, which is from within the Arctic Circle to about 14° north of the Tropic of Cancer. The general east and west arrangement of the highlands also permits the penetration of these ocean winds into the great European plain. Rainfall diminishes gradually from west to east, with variations according to special differences in topography.

Population. European population may be classified into three groups, the Teutonic group of the north, the Alpine group of the mountains and plateaus of central Europe, and the Mediterranean group. Practically, however, the classification by language groups is of greater importance.

The three principal groups are the Indo-Europeans, the Semitic, and Finno-Tataric.

Under the Indo-Europeans, the chief groups are the Celts (Irish, Manx, Welsh); the Teutons, consisting of Scandinavians (Danes, Swedes, Norwegians), Low Germans (English, Netherlands, Low Germans), and High Germans; the Italics (French, Italian, Spanish, Portuguese, Walloon, Romanians, and Ladin); Hellenics (Romaic, Neo-Hellenic); Slavonics (Russian, Bulgarian, Serbs, Croats, Slovenians, Bohemians, Slovaks, Poles, Sorbians); Iranics (Armenian, Ossetians); Indics (Gipsy dialects); Lettics (Lettish, Lithuanian); and unattached, the Albanians.

The Semitic consists of the Canaanitic branch and the Arabic branch. Of this group the only language still spoken is the Maltese.

The Finno-Tataric group is represented by the Fins, Estonians, Laps, Magyars, Turks, Tatars, Kalmuks, and others. Unattached are the Basques.

Ranked according to population, the largest countries of Europe are U. S. S. R., Germany, Great Britain, Italy, France, Poland, Spain, Romania, and Yugoslavia.

Belgium, the Netherlands, and Great Britain are the most densely populated countries of Europe. In Great Britain is the world's largest city, London, and in Germany is the third largest, Berlin.

Topography. Like the North American Continent, Europe consists of two great highland areas, with an extensive lowland between them. The general direction of these elevations and the great lowland area is from southwest to northeast. The northern highlands extend from Ireland to northern Scandinavia and Finland. The southern and the greater extend from Spain, through southern France, Switzerland, Italy, Austria, Hungary, and the Balkans, to the Black Sea.

The southern highlands reach the greatest elevations in the Alps of France and Switzerland. The highest peak of the Alps is Mont Blanc (15,780 feet). Other well-known peaks are Monte Rosa (15,217 feet), the Matterhorn (14,775 feet), and the Jungfrau (13,671 feet).

The highest points of the northern highlands are in southwestern Norway.

The great European plain stretches from the Bay of Biscay to the Ural Mountains, growing wider eastward, until, at the base of the Urals, it extends north and south from the Arctic Ocean to the Caspian Sea. Over it, in a former geological age, Arctic and Mediterranean waters freely mingled. It includes central and northern France, southeastern Britain, Belgium, the Netherlands, northern Germany, Denmark, southern and eastern Sweden, and almost all of European U. S. S. R. This great plain holds the bulk of both the agricultural and the industrial population of the continent, and upon it have been located the greatest cities of Europe. Fertile farm lands, great deposits of coal and iron, and favorable conditions for transportation have developed here the densest population of the continent.

The largest lowland areas aside from the great northern plain, are the Plain of Lombardy, drained by the Po River, and the Hungarian basin, drained by the Danube. Both of these regions are great centers of population and of trade.

A long arm of the sea extends into the great lowland area of Europe, forming the English Channel, the North Sea, the Baltic, and the Gulfs of Bothnia and Finland.

Resources. *Agriculture.* The distribution of crops is largely dependent on climatic conditions. The greater rainfall in the western countries is favorable to potatoes, vegetables, oats, and barley. The warmth of southern and western Europe is particularly favorable also to the production of grapes. In the east, where the climate is drier and sunshine more constant, is found a great wheat area. In the central portion, rye, flax, and sugar beets are very important

The raising of cattle and horses is pursued chiefly in the west and north, and of sheep in the southeast and southwest.

Forests. Though the major part of the great original forests in Europe have disappeared before the advance of population, there are still vast forest resources in Europe. European U. S. S. R. has about 492,500,000 acres of timber land, chiefly in the region just south of the Arctic tundra. In the northern countries, are conifers and evergreens; toward the south, deciduous trees.

Minerals. Europe is abundantly supplied with coal and the other useful minerals of manufacture and commerce, but deposits of the precious metals are limited. There are rich coal fields in Great Britain, Germany, Austria, Czechoslovakia, Belgium, and France; and vast petroleum fields in Poland, U. S. S. R., and Czechoslovakia. Iron, of vital importance to almost all manufacturing, is produced in great quantities in France, Germany, Austria, Great Britain, and Spain, and a very high grade is found in Sweden. Lead is mined principally in Germany and Spain. Spain has the richest copper mines in Europe. Practically all the tin ore produced in Europe comes from the Cornwall mines in England, but some is found in the Harz Mountains of Germany. Spain has rich mines of mercury, and this metal is also mined in Yugoslavia, Italy, Austria, and Germany. Enormous salt deposits are found in Austria and Germany, and the latter is one of the world's chief producers of potash. U. S. S. R. furnishes most of the world's platinum. Gold is found in paying quantities in the Ural Mountains of U. S. S. R., the Harz Mountains of Germany, and the Carpathians and their offshoots in Czechoslovakia and elsewhere. Silver is produced in Germany, U. S. S. R., Czechoslovakia, and Sardinia.

ICELAND

Iceland is the second largest island forming a part of the European continent. It is about 400 miles from the nearest point in Scotland, and 500 miles from the nearest in Norway.

The island, which has an area of 39,709 square miles, was granted independence by Denmark, 1918, with permanent neutrality. The present (1929) King of Denmark is acknowledged as the sovereign. The climate of the southern portion is temperate, though wet and stormy. The harbors rarely freeze to the exclusion of shipping. The interior tableland is largely a barren, grassless desert, covered with volcanic and glacial detritus. Numerous grassy lowlands, affording fair pasturage, cut into the tablelands.

The principal products are hay, cattle, ponies, goats, and sheep, though it is with difficulty that forage is raised. Iceland's main importance lies in its fisheries, which are of considerable richness.

AUSTRIA

The assassination of the Austrian heir-apparent by a Serbian fanatic at Sarajevo, capital of Bosnia, June 28, 1914, followed by imperative demands amounting to a renunciation of sovereignty, made upon Serbia by Austria, was the immediate precipitating cause of the World War of 1914–18, which all the resources of British, French, and Russian diplomacy were powerless to avert. As a result of the victory of the Allies, both the German and Austro-Hungarian Empires disappeared as entities in the political world.

Area and Population. Total area is 32,360 square miles. Prewar area 115,903 square miles. Population, 1923, 6,535,363, prewar 28,574,155. In **religion,** 95 percent of the people are Roman Catholics; 3 percent Jews. Elementary **education** free and compulsory from 6 to 14 years.

Physical Features. Austria is one of the most mountainous countries of Europe, three-fourths of its surface consisting of mountains or hills—mainly offshoots of the lofty Eastern Alps, which extend eastward to the valley of the Danube. The largest lake is Neusiedler, on the Hungarian border. The principal rivers are the Danube, flowing westward through northern part of Republic, and its tributaries (the Enns, in the northwest; and the Drava, in the southeast); also the Adige River, draining the beautiful valleys of southern Tyrol into the Adriatic. The Neusiedler See, southeast of Wien (Vienna,) is a large, shallow lake which has occasionally dried up.

Climate. Owing to its inland location and striking irregulatities of surface, Austria has a climate of great diversities. In the west the modifying influences of the Atlantic and Mediterranean are felt, but toward the east the range between extremes becomes greater. The climate, on the whole, is that of the temperate zone, but ranges to Arctic conditions on the Alpine heights. The mean annual temperature at Wien (Vienna) is 48.8°. Rainfall is adequate for all agricultural purposes, but decreases toward the east.

Government. Under the constitution adopted October 1, 1920, Austria is a federal, democratic republic (originally proclaimed November 12, 1918). Legislative power is vested in a Federal Diet of two houses—an assembly (*Nationalrat*) popularly elected for 4 years, and an advisory First Chamber (*Bundesrat*) chosen by the Provincial Diets. The President is elected for 4 years, by the two houses in joint session, and may be re-elected once only. All special privileges are abolished, all citizens enjoying equal rights. Each "Land" or Province has its own popular Diet, and each Commune has its own Council. Wien (Vienna), the capital (1,865,780 in 1923) is on the Danube.

Industries and Resources. *Agriculture* is the main occupation of the people of Austria, about 20 per cent of the total area being under cultivation in 1923. Foodstuffs produced, however, are insufficient for domestic needs, and imports of food are necessary. The principal grains, in order of volume, are rye, oats, wheat, and barley, and large quantities of potatoes and turnips are grown. The vine is extensively cultivated, and much wine produced. The principal live stock raised are horses, oxen, and beef and dairy cattle, the richest grazing lands being in upper Styria, Salzburg, and Tyrol. *Forest* wealth is abundant. *Minerals* are important, chiefly the rich deposits of anthracite coal, lignite, and iron. Copper, zinc, silver and gold ore, lead, and salt are also produced. *Manufactures:* Valuable industries are still carried on in new Austria, including the manufacture of pianos, motor cars, textiles, clothing, jewelry, leather, furniture, metal wares, etc. There are also blast furnaces producing annually about 500,000 tons of pig iron.

Defense. The *Army* forces are limited to 30,000 men. Universal compulsory service is abolished, and mobilization forbidden. The Navy comprises a few small vessels on the Danube.

HUNGARY

Formerly an integral part of the Austro-Hungarian Empire, Hungary was dismembered after defeat in the World War.

Area and Population. Total area is 35,875 square miles; prewar, 125,430 square miles. Prewar population, 20,886,487; 8,457,852 in 1926. Elementary **education** free and compulsory between ages 6 and 12. In **religion,** majority are Roman Catholics.

Physical Features. The larger art of Hungary occupies a great plain, sloping downward from the Austrian Highlands in the west to the valleys of the Danube River and its tributary the Tisza, which drain the heart of the country. The plain rises again toward the north and northeast, where it culminates in the Carpathian Mountains on the borders of Czechoslovakia, and elevation also increases gradually in the east, where Hungary is separated from Romania by mountainous spurs of the Transylvanian Alps or Eastern Carpathians. The plain is penetrated in places by outliers of these surrounding mountain systems.

The courses of the Danube and Tisza are generally parallel in Hungary, running north and south, but the Danube swings eastward below the border of Yugoslavia and receives the waters of the Ti not far above Beograd (Belgrade). Lake Balaton or Platten is the largest lake in Hungary.

Climate. The winters are very cold on the great plains, especially in the vicinity of the Carpathians, while the summers are warmer than those of western Europe within same parallels of latitude. Rainfall increases gradually toward the west, and is greatest during summer months. It averages 40 to 50 inches annually in the Carpathians, and 15 to 24 inches on the plains, but is very capricious.

Government. For a brief period following the abdication in November, 1918, of King Charles (successor to the late Emperor Francis Joseph), Hungary was an independent republic. In March, 1919, it passed briefly under Soviet control. Revolutionists, however, with Romanian assistance, restored a national parliamentary government under a Regent or Protector, and in March, 1920, Hungary was again declared a monarchy (constitutional). The Regent, elected by the National Parliament, is styled "Protector of the Magyar Republic."

Budapest is the capital (928,996 on January 1, 1921).

Industries and Resources. *Agriculture:* About two-thirds of the people depend on products of the soil. Their activities comprise farming ordinarily so-called, dairy work, market-gardening, fruit-growing, silkworm culture, lumbering, charcoal-burning, etc. The Hungarian plain has long been known as one of the granaries of Europe. The leading crops are corn, wheat, barley, rye, oats, and potatoes; also produces tobacco, sugar beets, hops, silk cocoons, wine, honey. Live stock comprises cattle, pigs, sheep, goats, horses, mules, and asses. *Forests* include beech, oak, and pine, covering about 1,357,438 acres. The chief mineral products are iron and coal. Gold, silver, lead, copper, mercury, antimony, sulphur, and salt are also worked. *Manufacturing* establishments include lumber mills, iron blast furnaces, steel mills, flour mills, breweries, etc.

Defense. The military forces of Hungary, 1920, comprised a National Army, the Gendarmerie, the Customs Guards, and the Police. The total strength of the National Army is limited to 35,000 officers and men.

YUGOSLAVIA (SERB-CROAT-SLOVENE KINGDOM)

Area and Population. Total area is 96,134 square miles. Population, 1920, was 12,017,323.

Physical Features. The surface of the Kingdom is largely mountainous. It is drained chiefly by the Danube and its tributaries—the Morava in the southeast, the Sava and Drava in the west-central and northwest, and the Danube and Tisza in the north.

Climate. The climate is inclined to extremes of heat and cold.

Religion. All religions are recognized equally before the law and enjoy equal rights. The Greek-Orthodox church includes 47 per cent of the population, and the Roman Catholic 39 percent.

Education. Elementary education is free and compulsory. In 1926 there were 7,208 elementary schools, 173 secondary, 155 civil, 19 commercial, a veterinary and engineering school, 62 girls' schools and 44 teachers' training colleges. There are three universities.

Government. Yugoslavia is a limited monarchy, the executive power resting with the king and the legislative power in a single-chambered National Assembly elected for four years. The king is the commander-in-chief of the army, and may declare war and make peace.

Industries and Resources. Agriculture is the main industry of the people. The cultivated area, 1923, equaled 55 per cent of the land; grass lands constituted 14 per cent, pastures 23 per cent, and vines 1.47 per cent. The greatest acreage (over 4,000,000 annually) is devoted to corn, with wheat (over 3,000,000) second and oats (1,000,000) third. Barley, grapes, rye, plums, apples, olives, and tobacco are also grown in quantities.

Forests. In 1924 there were over 18,000,000 acres of forests in the Kingdom, principally in Bosnia and Herzegovina. They consist largely of beech, oak, and fir.

Minerals. Coal, lignite, iron, copper, gold, lead, chrome, antimony, and cement are found in Yugoslavia. 4,101,266 tons of coal were mined in 1923. Oil wells are being sunk in Croatia.

Manufactures. Flour milling is the principal manufacturing industry, and there are 50 large mills in the country. Brewing and distilling, weaving, tanning, bootmaking, pottery, iron-working, and carpet weaving are also carried on. The wool carpets of Pirot in southeastern Serbia are famous the world over.

Commerce. The chief imports of Yugoslavia are metals and machinery, agricultural products, animal products, and chemicals. The exports include corn, wheat, cattle, horses, swine, prunes, and timber.

Defense. Military service is compulsory between 21 and 45. In December, 1924, the army included 6,751 officers and 121,000 men.

ROMANIA

Area and Population. The area of Romania is 122,282 square miles, including the former Russian Province of Bessarabia and the former Austrian Provinces of Bukovina and Transylvania, acquired as the result of Romanian assistance to the Allies in the World War.

Population, 1920, was 17,500,000. In **religion,** the majority belong to the Greek Orthodox Church. Primary **education** free and compulsory where schools exist. There are four universities.

Physical Features. With the exception of the Dobrudja, a steppe-like pastoral plateau along the Black Sea coast, the greater portion of Romania is level, in part an extension of the fertile Black Earth Zone of U. S. S. R. The Carpathian Mountains run down from the north, swinging in a great curve to the west through the heart of the country, where they are known as the Eastern Carpathians or Transylvanian Alps. The Delta of the Danube lies wholly within Romania, and almost the entire country is watered by the affluents of that great river system (the Pruth, Sereth, Maros, etc.) The Danube is the greatest channel of inland navigation in Central Europe. **Climate.** The climate is one of extremes and wide range. The mean annual temperature at Bucuresti (Bucharest) is 51°, with a range of over 100°. Insufficient and irregular rainfall makes the latter part of summer very dry.

Government is a constitutional monarchy. Legislative power rests in a Parliament of two houses. Executive power rests in a Council of Ministers. Capital, Bucuresti (600,000 in 1925).

Industries and Resources. *Agriculture* engages about 80 per cent of the people. The chief crops, 1924, were: corn, wheat, barley, oats, rye. Under normal conditions much tobacco is grown, and considerable sugar beets, beans, oil seeds, fruit, flax, and hemp. Live stock are extensively reared. *Forests* of oak, beech, pine, and fir total 16,918,964 acres, nearly 7 million acres being in the old Kingdom, and 5½ million in Transylvania. *Minerals* abound. Petroleum is exported. Coal, copper, iron, and manganese are also worked, and the great salt mines have been a State monopoly since 1863. *Manufactures* include flour, liquors, and refined sugar.

BULGARIA

Area. The area was 39,814 square miles in 1927. The dominating **physical feature** is the Balkan Mountains, which begin at the great gorge of the Iron Gates on the Danube, extend south along the eastern Serbian border, and then turn eastward running through the heart of Bulgaria to the Black Sea. North of the Balkans, the surface is a plateau descending to the Danube. In this section the soil is fertile: but **climate** is very dry, with wide range and sudden changes of temperature. South of the mountains are a number of hill-girdled basins with much more advantageous conditions. **Population:** The population, estimated 1928, was 5,483,125, three-fourths Bulgars. The State **religion** is the Greek Orthodox. Elementary **education** is free and compulsory. There is a university at Sofija (Sofia). **Government:** Legislative power is vested in a single chamber, the Sobranje, elected for 4 years by universal male suffrage. Executive power rests with a Council of Ministers nominated by King, who can dissolve Sobranje at any time.

Industries and Resources. *Agriculture* employs about two-thirds of the people, but methods are still primitive About 31 per cent of the total area is cultivated. Wheat and corn are the principal crops. Fruit, wine, tobacco, beet sugar, also produced in considerable quantities, and silkworm culture extensively followed. Roses are largely cultivated on the southern slopes of the Balkans, and much attar of roses is made for export. Live stock are reared in large numbers. Forest lands embrace less than a third of the total area of the country. *Minerals* belong to the State. Coal and iron exist in large quantities. Gold, silver, lead, manganese, copper, salt, limestone, marble, also produced. *Manufactures* are chiefly flour, textiles, cord, cigarettes, and attar of roses.

Defense. *Army* limited to 20,000 men, besides frontier and forest guards. *Navy* limited to police patrols on the Danube and along Black Sea coast.

GREECE

As a result of the World War Grecian territory has been greatly enlarged at the expense of Turkey and Bulgaria.

Area and Population. The area is 54,092 square miles with a population of 6,435,000. The State **religion** is the Greek Orthodox. Primary **education** is compulsory and there are a number of higher schools.

Physical Features. Coast deeply indented, generally rugged and barren. Interior extremely mountainous (Mt. Olympus, 9,800 feet). Many narrow valleys and small fertile plains. No navigable rivers. Canal across Isthmus of Corinth, opened November 9, 1893, about 4 miles long, is rarely used by foreign vessels. **Climate** ranges from temperate, with severe winters, in northern highlands, to subtropical in south. Mean annual temperature 64°. Rainfall deficient: greatest in west; annual average at Athēnai (Athens), 16 inches.

Government. The Constitution which was published in September, 1926, provides for the establishment of a legislative body consisting of an Upper and Lower House. The President, or chief executive, shall be elected by both Houses for a term of five years, and no Premier shall hold his office for more than one year.

Industries and Resources. Agriculture is the chief occupation, but only one-fifth of total area is cultivated. Three-fourths is mountains, and about one-third is waste land. Farming is backward, owing to dry climate and primitive methods. Cereals grown are wheat, barley, corn, and oats. Currants are the most favored and best cultivated crop. Olives are abundant. Grapes are largely grown, and much wine produced. Rice is cultivated in Macedonia, near Thessalonikē (Salonika). Tobacco, cotton, figs, oranges, lemons, are other important crops. Irrigation and drainage projects are making progress. Silk culture is carried on in Messenia and Thessaly. Live stock comprise sheep (most numerous), cattle, asses, horses, mules, and pigs. Cheese is produced in considerable quantity.

Forests cover about one-eighth of the country. Oak, beech, and pine still flourish on the upper mountain slopes, but fire and cutting have made great ravages. Reforestation by tree-planting is under way.

Minerals are found in great variety. Those worked include iron, copper, lignite, zinc, lead, silver, manganese, aluminum, antimony, tin, nickel, cobalt, sulphur, and chromite, ocher, and other earths. High-grade magnesite is abundant.

Manufacturers are advancing, leather, soap, and cotton goods making up the leading factory output. Other products are dried and preserved fruits, olive oil, wine, cheese, lumber, metal work.

ALBANIA

Lying on the east coast of the southern Adriatic, north of Greece, and comprising the former Turkish provinces of Scutari and Janina, with adjacent portions of the vilayets of Kossovo and Monastir, Albania declared its independence in 1912. Its right to autonomy was recognized by the Ambassadorial Conference in London, 1914,

which established it as a Kingdom under a European Prince, who was to be assisted by an International Commission of Control.

The country was overrun by Austrian troops in 1916, but regained its independence through Italian assistance, 1917. A Republic was later proclaimed with a constitution providing for legislation by a Parliament and a Senate. The executive office is vested in a President elected by the two Houses.

Area, about 17,374 sq. m.; pop., 831,877. Capital, Tirana (14,408). About two-thirds of people are Moslems; one-third, Christians (Roman Catholics in north, Greek Orthodox in south).

Education. There are 548 primary, 12 continuation, 2 secondary, and 1 American technical school in the country, a teachers' training college, and a school for girls.

Industries and Resources. Except in the fertile regions of the Adriatic littoral and the Korytza basin, Albania is mountainous, without railways and with few roads. *Agriculture* is scant and primitive. Tobacco, wool, and olive oil are the chief products. Southern Albania has large areas suitable for cotton and dairying.

POLAND

Until late in the 18th century, Poland was an independent Kingdom. Its geographical position, however, made it a meeting-ground of conflicting interests, and in 1815, by the Congress of Vienna, it was partitioned among Russia, Austria, and Prussia. During the Russian transition from imperialism to Bolshevism in 1917–18, several successive "Councils" were in control in Russian Poland; and in October, 1918, a Constituent Assembly was called to take over authority and draft a constitution. Independence was formally proclaimed November 9, 1918, and was recognized by the Treaty of Versailles, June 28, 1919.

Area. The area of Poland is 149,915 square miles. **Physical Features.** The surface consists in general of an undulating plain comprising gently waving slopes, rich alluvial flats, and some sandy tracts and marshes. At the south it culminates in the Carpathian Mountains on the border of Czechoslovakia (Bald Mt., or Lysa Gora, about 2,000 feet). Three-fourths of the country is drained into the Baltic at Danzig, by the Vistula River and its tributaries, chiefly the Bug. **Climate.** The climate is invigorating, though tending to extremes. Winters are long and rigorous. Rainfall is generally ample for cultivation.

Population. The population of Poland was 29,589,000 by the census est. of 1927, about two-thirds Poles, a people of Slavic origin. The prevailing **religion** is Roman Catholic, but all faiths have equal rights. Elementary **education** is free and compulsory, and secondary education is on a high level. There are eight universities.

Government. Under the Constitution adopted March 18, 1921, legislative power is vested in a national parliament (*Sejm*) of two houses, a Diet and a Senate, both elected by universal suffrage (both sexes, age 21). The President is elected by both houses jointly, for a 7-year term. He is supreme commander of the army, except in time of war; can make foreign treaties; and is not responsible politically or personally. Executive power rests in a Council of Ministers. Capital, Warszawa (Warsaw, 1,028,982).

Industries and Resources. *Agriculture* is the chief occupation. The productive area is about 85 per cent of the whole. The principal crops are rye, oats, wheat, barley, potatoes, sugar-beets, hemp, hops, tobacco, chickory. Legal limits are placed on size of holdings. Stock-raising is extensively followed. *Forests* cover over one-fifth of the country, being densest on the Carpathian foothills. *Minerals* are abundant. Coal deposits underlie 3,200 square miles. Iron ore is another rich resource. Salt deposits are practically inexhaustible. Galicia produces over 5,000,000 barrels of petroleum annually, also much potash. *Manufactures* are of vast importance. Industrial centers are at Warszawa, Lodz, Kracow, Dabrowica, Katowice, and Czestochowa. Cotton and wool spinning, manufacture of various kinds of paper, chemicals, timber, and refined sugar are the leading industries. There are 75 sugar refineries.

Defense. All Poles are liable to military service. *Army.* Peace strength fixed at 250,000: actual strength (1926) 216,829. *Navy* confined to a few former German torpedo-boats given to Poland for police purposes, and twelve gunboats.

CZECHOSLOVAKIA

One of the most important of the new States created as a result of the World War is this independent Republic built up of parts of the former Austro-Hungarian and German Empires. The National Council of the Czechoslovak countries on November 14, 1918, formally proclaimed the Republic, whose independence had been suppressed since Bohemia elected a Hapsburg ruler in 1526 and became united with Austria and Hungary.

Area. The area is 54,192 square miles (comprising Bohemia, 20,102 square miles; Moravia, 8,601; Austrian Silesia, including western part of the great Teschen coal district, 1,708; Slovakia and autonomous Ruthenia, 18,895 and 4,886 respectively.

Physical Features. The northern and western border regions are mountainous. In the east, the Carpathian Mountains extend along the Polish frontier, with an offshoot—the Little Carpathians. The sloping surface south merges into the plain of Hungary. The western half of Czechoslovakia comprises two great lowland basins largely surrounded by mountain chains, culminating on the German frontiers in the Böhmer Wald, Erz Gebirge, and Riesen Gebirge—outliers of the Alpine system. The Danube River forms part of the boundary with Hungary. The Danube rises on the eastern slopes of the Black Forest in Germany, has a length of 1,800 miles, is navigable from the Black Sea to Ulm in Württemberg, and drains about 315,000 square miles. The **climate** of Czechoslovakia is of great variety. On the Carpathian slopes, a continental climate prevails, with hot summers and very rigorous winters. In the western half, a mild climate in general prevails. Rainfall varies with proximity to the mountains. In the Carpathians, the average is 40 to 50 inches, but it declines to 16 to 24 inches on the plains.

Population, 1926, was 14,356,000. The Czechs (pronounced Tchecks) are of Slav stock, but there are also many Magyars and Germans. In **religion,** about four-fifths of the people are Roman Catholic. The reformed clergy, in 1920, decided to withdraw from Papal jurisdiction and establish a National Czechoslovak Church. **Education** is compulsory, ages 6 to 14. Except in Slovakia, there is practically no illiteracy. There are four universities.

Government. Under the Constitution adopted February 29, 1920, Czechoslovakia is a democratic Republic, Carpathian Ruthenia receiving autonomy. Legislative power is vested in a parliament of two elective houses—a Senate of 150 members (8-year term), and Chamber of Deputies of 300 members (6-year term). The President is elected for 7 years by the two houses in joint congress. He is assisted by a Cabinet of Ministers, whom he appoints and can recall. Freedom of speech and press are guaranteed, and racial minorities are protected in their rights. The franchise is open to all citizens, male or female, over 21 years of age. Capital, Praha (Prague), about 725,196 population.

Industries and Resources. *Agriculture:* In natural resources, as well as advanced industrial development, Czechoslovakia is one of the richest lands of Europe. Agriculture engages about one-third of the people. Cereals are the leading crops—oats, barley, rye, wheat, and corn. Others are sugar-beets and potatoes. Hops are grown for export and brewing. Fruits are also abundant—apples, pears, and stone fruit. Live stock are reared in large numbers—cattle, pigs, sheep, horses, and goats. In *forests*, the Republic is richly endowed, as nearly one-third of the surface is under forests. The largest trees are, in Slovakia (maple, ash) and Bohemia (oak, walnut, cherry). *Minerals* are also abundant, comprising coal (hard and soft), iron, antimony, graphite, and garnets. Gold, silver, copper, and lead are found in the Carpathians, rock salt, in Slovakia and Ruthenia. Slovakia is rich in iron, coal, petroleum, etc. Manufactures in 1922 engaged over 11,000 establishments, including 2,000 textile mills (linen, cotton, woolen), over 2,000 glass-works and factories making imitation precious stones, over 1,800 food-product factories, 349 paper mills, and 1,198 large furniture plants, besides sugar refineries, breweries, distilleries, blast furnaces and other ore-reducers, factories making machinery, electrical equipment, metal goods, gloves and other leather goods, chemicals, etc.

Defense. Service in the army is for 14 months, between the ages of 17 and 60. Average strength of Army about 120,000.

THE BRITISH ISLES

Area. The area of the British Isles (England, Wales, Scotland, Northern Ireland, Irish Free State, Isle of Man, and Channel Islands) is 120,860 square miles, or a little less than that of New Mexico.

Climate. The climate is largely determined by the insular character of the land. The surrounding waters cause an equable temperature, the annual range varying only about seventeen degrees over the larger part of the country. Southwest Ireland has a temperature as high as central Italy. Western coasts are rainy, and the eastern dry, the average yearly precipitation varying from 100 inches in the island of Skye, to 25 inches in London.

Population.

Year	Population	Year	Population
1891	37,880,764	1911	45,370,530
1901	41,609,091	1927	50,368,350

About 75 per cent of the total number of inhabitants is included in England, 10½ per cent in Scotland, 9½ per cent in Ireland, and 4½ per cent in Wales.

Religion. The Protestant Episcopal Church is the established church of England. The Sovereign is the supreme governor. The Anglican Church numbers over 7,000,000 members. Methodists, Congregationalists, and Baptists are the chief Nonconformists.

The established church of Scotland is the Presbyterian. There are comparatively few Roman Catholics and Episcopalians in Scotland.

In Ireland the Roman Catholics are in the great majority.

Taken as a whole, in the British Isles, members of the Roman Catholic Church are slightly in the majority, the Anglicans next in number, and the Presbyterians third.

Government. The British Isles are under an Imperial Government consisting of the Sovereign and Parliament. Parliament comprises the King, House of Lords, and House of Commons. The Peers of the House of Lords (about 720 in number) hold their seats (1) by hereditary right, (2) by creation of the Sovereign, (3) by virtue of office—Law Lords and English Bishops, (4) by election for life—Irish Peers, and (5) by election for duration of Parliament—Scottish Peers. The House of Commons is elected by ballot, and consists of 615 members, who represent County, Borough, and University constituencies. Anglican, Roman, and Church of Scotland clergymen are disqualified from membership in the House of Commons.

An Irish Home Rule Bill to establish separate parliaments in North and South Ireland was passed, 1920; but South Ireland, dominated by the Sinn Fein, claiming independence for all Ireland, ignored the Act. Negotiations, however, resulted Dec. 6, 1921, in a treaty, ratified in 1922, creating Ireland a Free State (which Ulster may join if she desires) constitutionally similar to Canada and other Dominions within the British Empire. See "Ireland."

The executive government of Britain is vested nominally in the Crown, but virtually in a committee of Ministers, the Cabinet. The First Lord of the Treasury is usually Prime Minister.

Education. In England and Wales, and in Scotland, elementary instruction is compulsory from the age of 5 to 14, with certain exemptions after the age of eleven. In every division of the British Isles, ample provision has been made for thorough educational facilities. Large government grants are made. There are also many private schools and schools under religious denominations. Higher education is amply provided for, through ten universities in England, four in Scotland, three in Ireland, and one in Wales.

Industries and Resources. *Agriculture:* About 58½ per cent of the total area of the British Isles is arable or pasture land. Oats, wheat, and barley are the great grain crops, and are grown to best advantage in England and Scotland. Potatoes are the important crop in Ireland. Large quantities of flax are also raised in Ireland. Sheep are the most numerous of the live stock, and are raised particularly in England and Wales.

Forests. Forest land in the British Isles totals over 3,000,000 acres.

Fisheries. Herring, haddock, cod, and plaice are caught in large numbers. Crabs and oysters are abundant on the east coast of England, and lobsters on the south coast.

Minerals. Coal is the chief mineral product of the British Isles. The fields on the eastern slope of the Pennines in England are the most important. The coal produced in the British Isles forms about nine-tenths of the total value of the mineral produce. (See separate articles on England, Ireland, and Scotland.) Iron ore ranks next among the minerals, and is richest in the Cleveland district, which produces two-fifths of the ore mined in the Isles. There are copper, tin, zinc, and lead mines, and slate quarries are numerous in Wales.

Manufactures. The metal-working industry is located in and near the iron ore and coal districts in England, and is the chief industry in the British Isles after the textiles manufacture, the products of which form about half the total export of the Isles. Great Britain and Ireland together lead all countries in volume of foreign trade. Imports, 1924, about $6,000,000,000; exports, $4,500,000,000.

Defense. Military service is not compulsory, the army and navy being recruited by voluntary enlistment. Strength of forces and cost of service must be sanctioned annually by Parliament. The navy is a perpetual establishment, under the Admiralty Board. In 1920, the strength of the British army, excluding troops in India, was 348,000 (to be reduced to 297,844 in 1924). In 1925 the navy included 22 battleships, 52 cruisers and light cruisers, 8 aircraft carriers, 207 flotilla leaders and destroyers and 66 submarines, with a personnel of about 100,500.

During the European war, England sent a large army to the continent, with many volunteer troops from distant colonies, particularly Canada, India, and Australia. The total strength of the army during the war is estimated at about 3,000,000 men.

Colonies. The colonial dominions of Great Britain are the most extensive of any outlying possessions in the world. The dependencies are scattered over all the continents. There are three classes of British colonies: (1) The Crown Colonies, entirely controlled by the Home Government; (2) those possessing Representative Institutions, in which the Crown has no more than a veto on legislation, but controls the public officers; and (3) those possessing Responsible Government, in which the Home Government has no control over legislative affairs, though the Crown appoints a representative who acts in an advisory capacity.

The self-governing Dominions are Canada, Irish Free State, Newfoundland, New Zealand, Australia, and the Union of South Africa.

ISLE OF MAN

Area. The area is 221 square miles. **Population,** 60,284 in 1921.

Religion. Wesleyan Methodists and Anglicans predominate.

Government. Administration is by a Governor appointed by the Crown, a Legislative Council of eleven members (including the Governor), and the House of Keys, a representative assembly of twenty-four members chosen for six years. Capital, Douglas.

Education. Instruction is compulsory. All branches are maintained with the same efficiency as in England.

Industries and Resources. *Agriculture:* The products are oats, barley, turnips, potatoes, grasses. Cattle are raised extensively.

Fisheries. A large fishing fleet is maintained.

Minerals. Lead and zinc ores, salt, limestone, and slate.

CHANNEL ISLANDS

Area. The combined area is 75 square miles (Jersey, Guernsey, Herm, Jethou, Alderney, Sark, Brechou, and Lihou).

Population. The total population of the islands, 1921, was 90,230.

Although English is taught in the schools, French is the official language. Each island has its own dialect, of a Norman-French origin.

Government. Jersey is administered by a Lieutenant-Governor and Bailiff, both appointed by the Crown, and the "States," a legislative body of 55 members. Guernsey, Alderney, and Sark are under one Lieutenant-Governor. Guernsey and Alderney have governments of their own. Sark is a dependency of Guernsey.

Industries and Resources. *Agriculture:* The greatest area is under potatoes and grasses. Oats and wheat are the chief grains. Cattle are raised in large numbers, each island having a special breed of its own, and no inter-breeding being permitted. The Jersey and Alderney cattle are famous the world over. Pigs are also raised in considerable numbers. Fruits and fresh flowers are extensively exported.

Minerals. Building stones and slates are exported.

ENGLAND AND WALES

Area. The total area of England and Wales is 58,340 square miles. That of England alone is 50,874 square miles, and that of Wales 7,466 square miles.

Climate. The winters of England and Wales are comparatively mild, through the influence of the Gulf Stream, aided by the strong prevailing southwest winds. The mean annual temperature, which is about 50° Fahr. for all England, diminishes gradually from southwest to northeast. The mean temperature in January, the coldest month, is about 39° Fahr., while that of July, the hottest month, is about 62° Fahr.

The rainfall ranges from about 25 inches in the London region, to over 60 inches in Wales on the western slopes.

Famous seaside and inland watering resorts in England and Wales are Brighton, Harrogate, Tunbridge Wells, Bath, Buxton, Eastbourne, Ilfracombe, and Colwyn Bay.

Population. Inhabitants of England, 1911, numbered 34,045,290; of Wales, 2,025,202—a total increase of 10.8 per cent in a decade. In 1927, the population of England was 38,890,000; of Wales, 2,205,680—an increase of 5.03 per cent since 1911. The estimated population of England and Wales was 41,095,680 in 1927. Population of Greater London, 1924, was 7,665,883.

Religion. In England the established church is the Protestant Episcopal (Anglican). An act was passed in 1914, to disestablish and disendow the church in Wales and in Monmouthshire, but this law went into effect only in 1920, Wales becoming a separate Archbishopric. The Sovereign of the United Kingdom is the supreme governor of the Church of England, which totals about 2,300,000 members in Britain, and 577,000 in Ireland. The total number of Nonconformists in England and Wales is about 2,000,000. The chief Nonconformists are the Methodists, the Congregationalists, and the Baptists, in the order of their numbers. The Methodists comprise six sects (Wesleyan, Primitive, United, Calvinistic, Wesleyan Reform Union, and Independent). Roman Catholics in England and Wales are estimated to number about 1,930,000.

Government. London is the seat of government of the British Empire. For description of Imperial Government, see elsewhere under "The British Isles." For local government, the England and Wales division of the United Kingdom is divided into sixty-two administrative counties, each having a County Council. These (with the exception of the County of London) are subdivided into County "Urban" or "Rural" Districts. In each county the Crown is represented by a Lieutenant and a High Sheriff. The City of London is under the authority of the County Council. Besides the ancient city (1 sq. m.), London proper occupies 118 sq. m., divided into 28 boroughs, each with a mayor, aldermen, and councilors. Women are eligible for county and city offices, except the office of county magistrate. "Greater London" covers about 693 sq. m.

Education. In England and Wales, elementary education is controlled by a Board of Education, and secondary and technical education, by the County and County Borough Councils. Higher education is provided by the universities, of which the Universities of Oxford and Cambridge are the most famous. In 1903, the University of Wales was founded; it comprises three constituent colleges. Other universities are: Durham, London, Victoria (Manchester), Birmingham, Liverpool, Leeds, Sheffield, and Bristol.

There are also University Colleges at Exeter, Nottingham, Reading, and Southampton.

The recognized technical schools in England and Wales number about 27, with about 113 additional institutions in which technical classes are held. Recognized schools of art number over 200, with many additional art classes. There are also about 7,000 evening schools and similar educational centers. A number of agricultural colleges have been established.

Elementary education is compulsory between the ages of 5 and 14, though, if so provided in local bylaws, total or partial exemption may be granted between the ages of 11 and 14. Statistics show the number of illiterates to be less than two per cent.

There are large numbers of special schools in England and Wales, for the blind, deaf, and defective.

Industries and Resources. *Agriculture:* About 80 per cent of the land area of England and Wales is productive, either in arable land, pasture, or forest. Wheat, barley, and oats are the great grain crops, and are grown to best advantage in Lincoln, Norfolk, Suffolk, Essex, and Yorkshire counties. Other grains are rye, beans, and peas. The wheat crop is less than one-fourth the quantity needed for home consumption. Considerable fruit is raised in Kent. Hemp and flax are grown extensively. Potatoes, turnips, mangels, cabbage, are the principal vegetables. Minor crops are hops, small fruit, and hay.

Cattle are raised in large numbers in Lincolnshire, Yorkshire, Devonshire, Somersetshire, and Cornwall. Seventy per cent of the area of Wales is pasture and grazing land. Sheep are by far the most numerous of the live stock, which is among the finest in the world. The area given over to permanent pasture and the raising of grass is about three-fifths of the total area of the cultivated lands.

The Board of Agriculture in England and Wales makes liberal grants for agricultural education and research to the universities giving agricultural courses, to institutes and farm schools, and for lecture work. There are also a number of traveling dairy schools, under supervision of the Farm Institutes.

The country is divided into provinces, in each of which is located an agricultural college or an agricultural department in a university.

Farm tenantry in England is far in excess of farm ownership. Holdings over one acre in size, 1924, numbered 409,383.

Forests. Forest land in England and Wales totals about 1,884,000 acres. New lands are constantly being forested, and reforestation is being carried on under government supervision.

Fisheries. Herring form the chief catch of the fishing industry, which is carried on chiefly in the North Sea, and employs about 39,000 men. Value of the catch, including shell fish, 1924, was about $120,000,000. Large quantities of fish, chiefly herring, fresh and cured, are exported. Other fish caught include haddock, cod, plaice, hake, sole, lobsters, crabs, and oysters. Shell fish are particularly abundant on the east and south coasts.

Minerals. Coal is the chief mineral product of England and Wales. Yorkshire and Durham counties in England are the greatest producers, followed by Glamorgan County in Wales. Other important coal producers are Lancashire, Derbyshire, Monmouthshire, Northumberland, Staffordshire, and Nottinghamshire counties. Iron ore ranks next in importance, though in value the output is only less than three per cent of that of coal. The Cleveland district produces two-fifths of the iron ore mined in the British Isles. In Wales, copper, tin, and lead works and slate quarries are numerous. Other minerals produced in England in small quantities are salt, zinc, silver, and gold. Radium has been discovered in the famous hot springs at Bath.

About 85 per cent of the total value of minerals mined in the British Isles is produced in England and Wales, and about 75 per cent in England alone.

Large quantities of metals are imported to supply the vast metal-working industries of the country.

Manufactures. Metal-working industries are centered around the iron ore and coal districts (Cleveland, Durham, Furness, Birmingham, and the "Black Country" districts), and form one of the two greatest industries of the United Kingdom.

Textiles is the other principal industry. The cotton industry is confined almost entirely to Manchester and the surrounding towns. The woolen industry is centered in West Riding of Yorkshire.

China and pottery are manufactured in many localities, but the chief centers are Derby and Staffordshire (Stoke and the nearby towns called "The Potteries"). In St. Helens, in south Lancashire, glass manufacturing has reached its most important development in England. Shipbuilding is one of the great industries of England, particularly in the northern counties on the northeast coast. In Wales, tinplate manufacture is increasing enormously, as well as in England. Almost all the mills are located in Glamorgan, Caermarthen, and Monmouth counties.

Other industries of great importance are the manufacture of cutlery, arms, motor vehicles, saddlery and leather goods, electrical apparatus, chemicals, paper, jewelry, clocks, and watches.

Over nine-tenths of the entire trade of the United Kingdom is done by England and Wales.

SCOTLAND

Area. Including the Orkney, Shetland, Hebrides, and smaller islands, the area of Scotland totals 30,405 square miles. Of this area, inland waterways comprise 609 square miles.

Population.

Year	Population	Year	Population
1891	4,025,647	1911	4,760,904
1901	4,472,103	1921	4,882,497
1927 (est.)	4,893,032		

The population of Scotland is decreasing in the north and in the south, but it is increasing in the central plains, where agriculture, industry, and educational methods are highly developed. The increase, normally about 6.5 per cent, was only 2.5 per cent in ten years. There are, on an average, 163.8 people to the square mile.

The ancient Gaelic language is much used in Scotland, particularly in the northwest, where approximately 65 per cent of the people speak either Gaelic only, or Gaelic and English.

Climate. The influence of the surrounding waters on the climate of Scotland is very great. This influence is most apparent on the coast, where winter cold and the summer heat are much moderated. The mean temperatures of January and July are 39° and 56.8° in the west, and 37.5° and 59° in the east. Rainfall is heaviest in the mountainous west.

Religion. The Church of Scotland is Presbyterian, and numbered in 1923 about 756,000 communicants. Through various secessions from the Church of Scotland, the United Free Church of Scotland was formed 1900; in 1923 it had about 534,000 members. There were also about 600,000 Roman Catholics and 56,000 Episcopalians in Scotland. Baptists, Independents, Methodists, and Unitarians are the other religious organizations of the country, but their numbers are comparatively small.

Government. Scotland's representation in Parliament consists of 16 Peers in the House of Lords, and 74 members in the House of Commons. As the Sovereign has not the power to create new Scottish peerages, the number is now diminishing. The Secretary for Scotland has charge of all Scottish affairs.

Local government is vested in a Local Government Board comprising the Secretary for Scotland as President, the Solicitor-General of Scotland, the Under-Secretary for Scotland, and three other members nominated by the Crown.

The largest administrative unit is the county, of which there are thirty-three. These counties are governed by popularly elected Councils. For parliamentary purposes, some counties have been united—as Clackmannan and Kinross, and Orkney and Shetland. Aberdeen, Glasgow, Edinburgh, and Dundee are each a county of a city.

Municipal bodies exist under bailies and provosts, instead of aldermen and mayors as in England.

Education. Elementary instruction is free, and is compulsory between the ages of 5 and 15, with certain exemptions for children over 13. Aside from the regular secondary education, comprising burgh schools, grammar schools, and high schools, special and technical education is given in day and evening classes in the large cities. There are four universities (St. Andrews, Glasgow, Aberdeen, and Edinburgh), Agricultural and Teachers' Training Colleges, and colleges controlled by the Roman Catholics and the Free Church.

Industries and Resources. *Agriculture:* Only about one-quarter of the total land area is arable and pasture lands. This is due to the nature of the soil and the surface, which in large areas is mountainous, and little adapted to agriculture. Scotland is a land of large estates. The difficulties of cultivation tend to limit the number of small holdings, which range in size from about 50 acres up to 200 acres. In addition, a strict entail law tends to keep the largest estates in the hands of old families.

Oats is the staple grain, but barley is in large demand by distilleries. Wheat is grown in the south, and potatoes and turnips largely cultivated.

Many farmers have turned to stock-raising, in preference to crop-farming. The breeds of cattle common to the country are the Ayrshire, which are specially adapted for dairy farms; the polled Angus, or Aberdeen, valuable for beef-making qualities; and the hardy West Highland, or Kyloe, with long horns, shaggy coat, and decided colorings. Special breeds of sheep are the black-faced, of the Highlands (raised for mutton), and the Cheviots, natives of the Cheviot Hills (raised for wool). The breeds of horses are the Shetland and Highland ponies, and the Clydesdale draft.

Forests. There are 880,000 acres of woodland in Scotland, producing chiefly firs and larch.

Fisheries. Herring is the staple catch, but cod and haddock are also taken in enormous quantities, chiefly off the east coast. Salmon and trout abound in the lakes and streams. Shellfish, crabs, oysters, clams, shrimps, are also important. Scotland employs more men in the fishing trade than any other country of the British Isles. It is estimated that about 30,000 men and boys are engaged in the fishing fleet.

Minerals. Coal and iron, which are usually found within convenient reach of each other, are the principal mineral products.

The coal fields in Lanarkshire yield nearly three-quarters of the total output of the country. Fife, Ayr, Stirling, and Midlothian are other important fields.

The iron-producing counties are Ayr, Lanark, Renfrew, Linlithgow, Dumbarton, Fife, Midlothian, and Stirling. Lead ore is mined in Dumfries and Lanark. Copper is also mined.

Aluminum is treated in works at Foyers in Inverness, where there is plentiful water-power for the generation of electricity. This water-power plant at Foyers is said to be the largest in the entire United Kingdom.

There are numerous quarries in Scotland producing large quantities of limestone, sandstone, oil shale, granite, fire clay, and slate.

Sandstone is quarried in all counties, particularly in Lanark, Dumfries, Ayr, and Forfar.

Granite, found in all shires, is quarried most extensively in Aberdeenshire.

Limestone is most abundant in Fife and Midlothian.

Slate is produced in Argyle.

Oil shale is found in Linlithgow.

Fire clay is abundant in Lanark.

Manufactures. The great iron foundries and engineering works are located in the Central Plains or Lowlands, near the shipyards and coal fields. The manufacture of machinery, implements, railway coaches, motor cars, wagons, and carriages is centered here.

Shipbuilding. Many of the most valuable improvements in ship construction have been wrought by the Clyde shipbuilders in the Glasgow district. The principal Clyde yards in addition to the immediate Glasgow district (Govan, Partick, Fairfield, Clydebank, and Renfrew) are at Dumbarton, Port Glasgow, and Greenock.

Textiles. Woolens and worsteds are manufactured extensively in Scotland. Tweeds are the most important output of the industry, though carpets, tartans, shawls, and plaids are also produced in large quantities. The chief centers for the manufacture of tweeds are Galashiels, Hawick, Innerleithen, and Selkirk. The carpet-weaving industry is centered at Kilmarnock, Aberdeen, Ayr, and Glasgow. Linen is manufactured chiefly in Forfar, Perth, Fife, and Aberdeen. Dundee is the seat of the manufacture of coarser fabrics and jute goods such as gunny sacks, packing sheets, carpets, floor-cloth backings, etc. Jute is cultivated on a large scale only in India, from which country the fiber is imported. Cotton and silk are manufactured at Glasgow and Paisley.

Distilleries. The production of whisky from malted barley has attained tremendous proportions. The leading counties in this industry are Argyle, Banff, Elgin, Inverness, and Aberdeen. More than four-fifths of the distilleries of the United Kingdom are in Scotland. This industry has grown very rapidly within the last twenty years. Whisky has displaced ale as the national beverage, but ale is still brewed extensively in Edinburgh.

Paper, Stationery, and Printing. Scotland has always excelled in the manufacture of paper and stationery, and in the printing industry. Midlothian has long been famous for its paper manufacture, and the importance of Glasgow, Aberdeen, and Edinburgh in these industries is well known.

IRELAND

Area. The total area of Ireland is 31,829 square miles, making it a little smaller than the State of Maine.

Population.

Year	Population	Year	Population
1851	6,552,385	1891	4,704,750
1861	5,798,564	1901	4,458,775
1871	5,412,377	1911	4,390,219
1881	5,174,836	1927 (est.)	4,229,124

Ireland has suffered from an almost continual decrease in population for many years, due to emigration, which is chiefly to the United States, and which started with the famine of 1846.

The average population per square mile in 1841 was 251. The density has now decreased to 134 per square mile. Dublin (population, 438,000) is the largest city. Belfast (434,000).

It is found that the number of people who speak only the old Irish language is decreasing. The principal locality where this language is spoken is in the Province of Connaught. About 13 per cent of the people speak both Irish and English.

Religion. In 1869, by Act of Parliament, the Church of Ireland ceased to be established by law. The Prostestant Episcopal creed is held, however, by over 13 per cent of the people. Three-quarters of the total population of Ireland adhere to the Roman Catholic faith. The Presbyterians, who are found chiefly in Ulster, are the descendants of Scotch settlers. At the last census (1911), Roman Catholics numbered 3,242,670; Protestant Episcopalians, 576,611; Presbyterians, 440,525; and other miscellaneous denominations had a membership of 130,413, including about 5,100 Jews.

Government. The executive government of Ireland was formerly vested in a Lord-Lieutenant representing the Crown, assisted by a Privy Council and by a Chief Secretary who was a member of the British House of Commons. Local administration was by popularly elected Councils for counties and rural districts, and a few towns had voluntarily adopted the Commission form of government.

A Home Rule bill granting autonomy to Ireland under a separate Irish Parliament was enacted by the Imperial Parliament in 1914, but Ulster opposed this form of Home Rule, and operation of the Act was deferred until after the War.

In 1920, a new "Government of Ireland Act" was passed, coming into force in May, 1921, establishing separate parliaments for Northern and Southern Ireland, with a Council to serve as harmonizing medium in matters requiring joint negotiation of the two Irish Houses. This Act gave Ireland practical independence, similar to that of the autonomous overseas Dominions of the Empire, limited only by certain strategic safeguards considered vital to imperial interests, affecting naval and military matters and the power of negotiating foreign treaties, and arising out of the fundamental and unchangeable natural community of relations imposed by Ireland's geographical position in relation to the other parts of the United Kingdom.

Northern Ireland (comprising all Ulster except the predominatingly Roman Catholic counties of Cavan, Donegal, and Monaghan, and including about 28 per cent of the total Irish population) at once accepted the new régime. South Ireland, however, dominated by the Sinn Fein, organized a Republic, claiming for all Ireland the right to absolute separation from the Empire, and ignored the Act.

An Irish-British treaty, however, was finally signed Dec. 6, 1921, making Ireland a Free State having "the same constitutional status" as Canada "in the community of nations known as the British Empire, with a Parliament having powers to make laws for peace and order and good government in Ireland, and an executive responsible to that Parliament." This treaty was ratified by the Republican Parliament (Dail Eireann), Jan. 7, 1922; by the South Ireland Parliament, Jan. 14, which set up a Provisional Government. British evacuation began Jan. 17. Imperial enabling act giving legal status to Irish Free State was signed by the King, Mar. 31, 1922; and popular acceptance of the new régime was overwhelmingly confirmed by an Irish general election held in June. Northern Ireland is free to join the Free State at any time.

In spite of peace treaty between North and South, signed Mar. 30, 1922, irreconcilable radicals on both sides prolonged serious disorders.

Education. Illiteracy has been decreasing steadily. Primary instruction is compulsory. Secondary education in the Free State is under private control, many of the schools being run by religious orders. Higher education is maintained by Trinity College, Dublin, by the National University of Ireland at Dublin, and by Queen's University of Belfast.

Religion in Ireland occupies a prominent position in education.

Industries and Resources. *Agriculture:* Ireland has a fertile and easily cultivated soil, though arable land forms not over 25 per cent of the total land surface. The excessive moisture in wet seasons damages the cereal crops, especially in the south and west, but good drainage is aiding production. Small holdings of from 1 acre or less to 50 acres, are the rule. Of the holdings, 35 per cent are rented.

The work of the Department of Agriculture and the spread of co-operative societies among farmers, are offsetting the disastrous effects which politics exercised so long on agriculture. The Department of Agriculture provides agricultural instruction by itinerant teachers, and by the College of Science at Dublin, the Albert Agricultural College at Glasnevin, and the Munster Institute at Cork, besides maintaining numerous stations for apprentices, and other agricultural school centers, advancing the improvement of live stock, and conducting special investigations.

Co-operation has become one of the most promising features of Irish agriculture, through the efforts of the Irish Agricultural Organization Society. Co-operative societies have been organized for the maintenance of creameries, for the purchase of seed and implements, and for the establishment of a credit system Connected with the central society are societies for poultry raising, for rural industries, bee-keeping, and other agricultural pursuits.

The hay and forage crops cover as much area as the grain and green crops combined. Potatoes are raised in greater quantities, relatively, than in any other country, the prosperity of Ireland depending largely on this crop. Oats, barley, and wheat are the leading cereals in the order named. Beans and peas are grown in small quantities. Turnips, swedes, and mangels rank next to potatoes as green crops. Considerable flax is grown, the plant flourishing in a sea climate of moderate temperature.

Cattle and sheep are the principal live stock. Pigs, horses, goats, asses, and mules are also reared extensively.

Forest Products. About half the timber products are used in mining operations. About 300,000 acres are woodland.

Fisheries. The Government has encouraged the fishing industry by loans to the fishermen, and by building and improving piers and harbors. Over 20,000 men and boys are engaged directly in the fishing trade. Salmon, oysters, pollan, and mussels are the important catches.

Minerals. The mineral output of Ireland is unimportant. Coal fields are found in all provinces, but production is small. Iron ore is worked in Antrim, and there are many quarries throughout the country which produce marble, slate, limestone, sandstone, granite, and clay. Copper, lead, and silver are found.

Manufactures. The manufacture of woolens in Ireland attained great prosperity in the latter part of the 17th century, but declined under the imposition of heavy export duties. It has recently shown a tendency to increase. Cotton goods are also produced.

In Ulster is the one great industry which the country supports—linen manufacture, employing about 60,000 people. This industry is centered in Belfast, in Ulster Province, but mills and factories are spread over all the eastern counties of Ulster. The supply of flax, much of which was imported from Belgium, was greatly reduced during the World War. Irish poplin, a mixture of silk and wool, was once a popular article of manufacture, and is still celebrated, but the output at the present time is small. Balbriggan, on the east coast, north of Dublin, is widely renowned for its hosiery.

Whisky has been distilled for several centuries. The largest whisky distilleries in the British Isles are in Dublin. This city is also celebrated for its porter, or "stout," which is brewed in the largest establishment of its kind in the world.

Shipbuilding is confined to Belfast, where the great "White Star" liners are built in one of the largest yards in the world.

SPAIN

Area. The total area of Spain is 195,010 square miles, including the Balearic Islands (1,935 square miles) and the Canary Islands (2,807 square miles), regarded as integral parts of the kingdom.

Climate. With the exception of the northern and northwestern regions and the southern coast bordering on Africa, there is a wide range of temperature between summer and winter. The mean annual temperature ranges from 53° on the interior tableland, to 70° in the extreme south. The climate is generally dry. In parts of the northwest maritime regions, however, there is much rainfall.

Population.

Year	Population	Year	Population
1887	17,565,632	1910	19,588,688
1900	18,618,086	1920	21,347,335
		1925 (est.)	22,127,699

The Spanish race comprises three groups, Castilian, Catalan, and Galician. The Castilian occupies the interior and south of Spain; the Catalan is found on the east coast and Balearic Islands; and the Galician, to the north of Portugal. Besides these, there are about 400,000 Basques on the north coast, chiefly in Vizcaya, Guipuzcoa, and Alava, a very ancient people entirely distinct in language and race from the Spaniards; 60,000 Morescoes in the south, 50,000 gypsies, and 7,000 Jews.

Religion. The State Church and practically the entire population are Roman Catholic. Protestants are allowed restricted liberties.

Government. A constitutional monarchy governed by the King and the *Cortes*. The *Cortes* is composed of a Senate and Congress. The senators are of three classes: (1) Senators by their own right—princes of the blood, grandees, and the highest officials of the state; (2) life senators appointed by the King; and (3) 180 senators elected by the provinces, church, universities, and the citizens who pay the largest contributions. Congress is elected by the people.

Education. About half of the people are illiterate, but conditions are improving. Public and primary schools are maintained by the Government. Secondary education is conducted in "institutions," of which there is at least one in every province. There are eleven universities and a special additional medical faculty.

Industries and Resources. *Agriculture:* About 88 per cent of the soil is capable of production, though only 44 per cent is actually used for the growing of food. Agriculture employs about one-fourth of the people, but is hampered by deficient and irregular water-supply. Except in the north and northwest, the land is semi-arid and requires irrigation. The leading crops are wheat, barley, oats, rye, corn, beans, peas, tares, vetches, rice, meslin, lentils, and millet. Grapes, olives, sugar beets and cane, flax, hemp, oranges, and nuts are also grown. In 1923 a million and a half tons of olives and over a quarter of a million tons of olive oil were produced. About six million gallons of wine are produced annually.

Cattle raising and dairying are carried on in the northern provinces. The vast flocks of fine-fleeced merino sheep once raised have dwindled considerably, though there are still over 20,000,000 sheep in Spain.

Fisheries. Sardines, tunny fish, and cod are the main catches.

Minerals. Spain is rich in mineral wealth. Coal, lead, copper, and iron are the principal minerals. Much zinc, mercury, sulphur, silver, manganese, and salt are also mined.

Manufactures, except wine, olive oil, and corks, are chiefly for home consumption. Textiles, paper, glass, leather, and metals are the important products.

Defense. *Army:* Strength, 1924, was 262,500. Military service is compulsory, and determined by ballot; total term, 18 years. Active service is for 2 years. There is an aviation corps. A colonial army is maintained.

Navy: Dreadnoughts, 2; cruisers, 9; destroyers, 7; torpedo boats, 22; gunboats, 14; submarines, 12. Personnel, 17,660 of all ranks.

Colonies. Spain has gradually lost her great colonial possessions. All that now remain are in Africa, with a few adjacent islands. The principal colonies are Rio de Oro and Adrar, Spanish Guinea, Spanish Morocco, and Fernando Po. Area of colonies, about 129,401 square miles; population, 813,846. Spain and France share the protectorate of Morocco.

PORTUGAL

Area. The area of Portugal is 35,979 square miles, including the Azores (907 square miles) and Madeira (285 square miles), which are regarded as integral parts of the Republic.

Climate. The climate of the country is generally temperate and equable along the coast, but prevailing high altitudes in interior cause a considerable range between annual extremes of temperature. Rainfall is excessive on north part of coast, but scanty south of the Tagus, where hot winds from Africa prevail. The climate of the Azores and Madeira is mild.

Population. The population, including Madeira and the Azores, follows:

Year	Population	Year	Population
1890	4,049,729	1911	5,957,985
1900	5,423,132	1920	6,032,991

Religion. Roman Catholicism was formerly the state religion, but now there is equal toleration of all faiths.

Government. Since the overthrow of King Manoel II in 1910, Portugal has been a Republic, governed by a President and two Chambers. The Upper Chamber consists of 71 members, and is elected by the Municipal Councils. The Lower Chamber, or National Council, consists of 164 members, who are elected by direct suffrage for three years. The President of the Republic is elected by the Chambers for 4 years and cannot be re-elected.

Education. Primary education is compulsory. There are numerous secondary schools, special schools and colleges, and three universities. Before the school reform in 1911, the percentage of illiterates was very great; 70 per cent of the people are still illiterate.

Industries and Resources. *Agriculture:* Only about one-third of the land is cultivated. Agricultural methods are very primitive, and large tracts of cultivable lands lie idle. Corn, rye, and wheat are the chief cereals. Grapes, olives, figs, tomatoes, oranges, onions, potatoes, barley, and beans are also grown. Oxen, sheep, and goats are raised on the pastures.

Forests. About 17 per cent of the country is under forests. Pine, oak, chestnut, and cork are the most important trees. Annual output of cork, about 176,368,000 pounds.

Minerals are but little developed. Wolfram is the most important, others being iron, copper, manganese, antimony, lead, tin, and gold.

Manufactures. Wine is the chief product (Madeira, Porto, and Villa Real). Textiles, cork products, shipbuilding, lace, porcelain tiles, chinaware, and olive oil are also important manufactures.

Fisheries. Sardines, tunny, and cod are the main catches.

Defense: *Army:* Peace strength, 37,485, raised by conscription; military age, 17 to 45. Active service totals ten years.

Navy: Protected cruisers, 4; destroyers, 5; torpedo boats, 6; submarines, 4, and a variety of gunboats. Personnel, about 6,000.

Colonies. The colonies in Africa and Asia comprise an area of 936,017 square miles, and a population of 9,623,123. The largest are Angola (West Africa), Mozambique (East Africa), Portuguese India, Timor, Guinea, and Cape Verde Islands. The chief products are coffee, rubber, wax, cocoa, sugar-cane, ivory, oils, spices.

ANDORRA

Area. Andorra totals in area 191 square miles.

Population. Inhabitants number about 5,231.

Andorra is an autonomous state under joint suzerainty of France and the Spanish Bishop of Urgel, and is governed by a Council of 24 members, which elects a first and second Syndic to administer public affairs. Andorra is the sole survivor of a number of independent medieval valley-settlements in the Pyrenees. The raising of cattle and sheep is the chief occupation.

GIBRALTAR

Area. The total area is one and seven-eighths square miles.

Population. The population, 1921, was 20,638, of which about 1,200 were aliens.

Gibraltar is a Crown colony of the British Empire, used as a naval base for the Mediterranean fleet. Its harbor is excellent, and as a strategic position it is unequaled. Height of rock, 1,396 feet.

FRANCE

Area. The area of France totals 212,681 square miles, or a little more than the combined area of Illinois, Ohio, Michigan, and Wisconsin.

Climate. The climate is of considerable evenness, influenced by the sea on the west, and protected by the mountains on the east. East and central France, at higher altitudes, have a wider range of temperature than the west and north. Rainfall is unequally distributed, and is least along the Mediterranean.

France has many famous summer and winter resorts. The southern coast east of Marseille is protected from the northern winds by the highlands, and this region has become a great winter resort known as the Riviera.

Population.

Year	Population	Year	Population
1872	36,102,921	1901	38,961,945
1881	37,672,048	1911	39,601,509
1891	38,342,948	1921	39,209,518
		1926 (est.)	40,743,851

The foreign population is small. The Corsicans are of Italian stock, and several hundred thousand Italians live in southeastern France, especially about Nice. In the Department Nord, are about the same number of Belgians.

Religion. No religion is recognized by the State. All forms are tolerated. The most powerful denominations are the Roman Catholic, Protestant, and Hebrew.

Government. France is a republic with a representative government. The chief executive is the President, assisted by the Ministry. Legislative power is vested in the Senate and the Chamber of Deputies. The country is divided into 90 Departments, which comprise arrondissements, communes, and cantons.

The President is elected for a term of seven years by the Senate and Chamber of Deputies in joint assembly. The Senate is elected indirectly by the people, for 9 years, one-third retiring triennially. The Deputies are elected by universal suffrage, for four years. There is a special institution, a State Council, introduced by Napoleon, which gives opinion on administration questions.

Education. The educational system is of the highest type. Primary education is both compulsory and free. Secondary education is not free, but only a small fee is required. Higher education is provided at a reasonable charge by sixteen state universities, and many other special institutions and faculties. Professional and technical instruction is amply provided for throughout France.

Industries and Resources. *Agriculture.* A greater proportion of land is capable of cultivation than in any of the other large countries of Europe. The largest grain acreage is devoted to wheat, the leading districts in its production being the basins of the Seine, Loire, and Garonne rivers. Large quantities, however, have to be imported. Among the cereals, oats are given the next largest acreage, and are most important in the Seine basin. Rye, barley, and mixed grains are other important crops.

Vineyards occupy about 4,000,000 acres, and great quantities of wine are produced. The great wine regions are the departments Hérault, Aude, Gironde, Côte-d'Or, Charente, Gers, the Rhône and Saône valleys, and the districts known under the old names of Champagne, Anjou, and Touraine. France is the greatest grape-raising and wine-producing country in the world. The wine produced in 1923 was 1,257,611,000 gallons.

Potatoes have an acreage about 92 per cent that of the vineyards. Sugar beets are grown extensively. Other agricultural products are maize, buckwheat, tobacco, colza, and hemp.

Fruits and nuts yield crops of great value. Cider apples, plums, olives, walnuts, and chestnuts are the leading products.

Silk culture is carried on extensively in the warm areas of the lower Rhône, and is progressing with government aid. The industry is most extensive in Gard, Drôme, Ardèche, and Vaucluse.

Stock-raising receives much attention, especially among the hills in the northwest, where fine pasture lands abound. Great quantities of butter and cheese are exported, principally to London. Roquefort is the most famous of the Normandy cheeses. The Normandy region is also famous for its fine breed of horses. Large numbers of mules are raised in the south of France.

Fisheries. The fisheries are among the most important of the resources. The value of the French and Algerian fishery products is more than $90,000,000 annually.

The chief products are herring, mackerel, sardines, anchovies, tunny fish, lobsters, and oysters. The sardine fisheries are most valuable. The sardines are canned and sent to all parts of the world.

Forests. About 16 per cent of the country is under forest.

Minerals. Of the minerals, coal is the most important. It is mined in the departments of Nord, Pas-de-Calais, Rhône, and Loire; and until 1933 the former German coal mines in the Saar basin are to be administered for the exclusive benefit of France. Iron is mined in Meurthe-et-Moselle, and zinc in Gard and Aveyron. Other important minerals are lead and silver, copper, antimony, arsenic and gold, manganese, and salt. Quarries produce large quantities of building stone, slate, and cement.

Manufactures. The manufactures of France depend to an unusual extent on highly skilled labor, rather than on the advantage of raw materials, and they excel in the quality of their products. The industry employing the greatest number of persons is the manufacture of clothing, centered chiefly in Paris and suburbs.

Foundry work and tool-making are carried on in the Seine, Nord, Loire, Meurthe-et-Moselle, and Ardennes departments. St. Étienne, Marseille, and Bordeaux are great steel cities. Large quantities of iron ore are imported from Spain to the southern smelters.

Wool textiles are manufactured in Department Nord and the Champagne region, chiefly in the cities Roubaix, Tourcoing, Reims, and Sedan. Cotton textiles are produced in Normandy (*Rouen, le Havre*), Nord (*Lille, Tourcoing,*) and Vosges (*Epinal, St. Die*). Silk textiles are important in Rhône (*Lyon*), Isère (*Voiron*), and Loire (*St. Étienne*). Lyon is the world's greatest silk market. About half the industrial workers are employed in branches of the textile and millinery industries.

Other important manufactures are sugar, alcohol, leather, wood work, pottery, scientific instruments, flour, and bakery products.

Defense. *Army:* Military service is universal and compulsory. The active army, 1924, numbered about 660,000, including 100,000 in army of occupation of the Rhine, besides forces in Syria and Constantinople.

During the great European conflict, France's military resources were taxed to the utmost. The Germans advanced almost to the gates of Paris, causing incalculable destruction and ruin to the north of France, where most of the great industries are centered. Villages and cities were destroyed, and agricultural lands laid waste, a ruin from which recovery will be difficult and slow. France mobilized altogether 7,935,000 white and 475,000 colored (colonial) troops. The casualties included 1,358,872 white troops killed and 2,560,000 wounded.

Navy: Dreadnoughts (1924), 6; other battleships, 3; armored cruisers, 6; protected cruisers, 6; light cruisers, 5; torpedo boats, 17; submarines, 46.

Colonies. In the extent and importance of her colonies and dependencies (4,413,671 square miles, including the Sahara), France is second only to Great Britain. The total population of these possessions amounts to about 57,094,648. French power ranges from America to Africa, India, Indo-China, the Indian Ocean, and Oceania. The most important colonies and dependencies are Algeria, Tunis, Indo-China, West Africa, French Congo, and Madagascar.

MONACO

Area. The total area is eight square miles. Situated in the most favored portion of the Riviera, it is visited by many tourists annually.

Population. Inhabitants number 23,418.

Government. This small principality is governed by a Prince, and a National Council elected by universal suffrage. Revenue is derived mainly from the gambling tables of Monte Carlo. Monaco has its own coinage and postage stamps.

Industries and Resources. Olive oil, oranges, citrons, and perfumes are produced and exported.

The "guard of honour" and troops formerly maintained have been replaced by a semi-military police force.

ANVERS (ANTWERP) CATHEDRAL

Copyright, Detroit Photographic Co.

CLOISTER AND CASINO

It is hard for Americans, whose apartment houses are "old" in a decade, to have any conception of the wonders of construction and durability of the buildings which have stood for centuries in the Eastern Hemisphere, so rightly termed the "Old World." We have the house in St. Augustine, Fla., built in 1564, and the buildings in Santa Fe, N.M., which date back to the beginning of the seventeenth century; but that edifices whose builders had already been a hundred and forty years at work when Columbus discovered America, as had those of Anvers Cathedral, should to-day be as safe as, and far more beautiful than, our modern structures, is not easy to grasp in its full significance. The mecca of tourists who visit Belgium in the years to come must be, as in the past, the great cathedral at Anvers. Begun in 1352 and completed—except the south tower, which is still unfinished—in 1592, this is one of the most beautiful and perfect specimens of Gothic architecture in the world. It contains Rubens's masterpiece, "The Descent from the Cross," exhibited at certain hours to the hushed group of sightseers gathered before it.

Crowded close about the cathedral, like children at a mother's knee, are houses and shops, insignificant beside the inspiring height and area of the famous edifice, which covers 70,000 square feet of ground. To be passing through one of the narrow streets on which the cathedral abuts, just as the chimes are rung, far overhead, each bell stumbling over the next in eager hurry, is a strangely moving experience.

Far away to the south, on the French Riviera, lies an equally famous place of entirely opposite character—Monte Carlo, the notorious gambling casino. The principality of Monaco, which contains Monte Carlo, is only about eight square miles in area and is, therefore, the smallest state of Europe. The government is administered by a Prince and a Council of State. Legislative power is vested in the Prince and an elected National Council.

Monaco practically surrounds the bay of the same name, the town of Monaco occupying a rocky headland to the south, Condamine the narrow shore-land on the west, and Monte Carlo the rocky slopes to the north. The last-named comprises the casinos and the numerous villas and hotels which have sprung up to accommodate the visitors, and in whose romantic gardens both fact and fiction have laid the scenes of many of the comedies and tragedies associated with the place. A spot of bewitching beauty, it is not to be wondered at that the charm of the place and the fascination of the game prove alluring to the adventurer.

The gambling resort is in the hands of a joint-stock company, which pays the prince an enormous amount, approximately five million dollars having been made over in two lump sums, and more than $335,000 being paid each year. The inhabitants of Monaco are not allowed to play at Monte Carlo, that privilege being reserved for the game-loving tourists who flock there from all over the world.

MONACO, THE RIVIERA, FRANCE

THE NETHERLANDS

Area. The Netherlands has a land area of 13,202 square miles.

Physical Features; Climate. Surface is flat, one-fourth below sea-level, and protected from inundation by 1,500 miles of dikes. Owing to proximity of sea, the winters are moderate and the summers cool. The mean annual temperature is about 50°; the maximum, 94°; and the minimum, –5.8° Fahr. Rainfall averages twenty-eight inches annually.

Population.

Year	Population	Year	Population
1889	4,511,415	1913	6,114,302
1900	5,104,137	1927	7,526,097

Religion. About half the population adhere to the Dutch Reformed (Presbyterian) Church, and about a third to the Roman Catholic. Churches of both denominations receive fixed allowances from the Government. Complete liberty of conscience and social equality are granted to adherents of all churches.

Government. The Netherlands is a constitutional monarchy, governed by the Sovereign and a Parliament, called the States-General, which consists of two chambers. The members of the First Chamber are elected by the Provincial states for 6 years, one-half retiring triennially; those of the Second Chamber, directly by the people, for four years. 's Gravenhage (The Hague) is the official capital, population 408,634.

There is a State Council composed of fourteen members, and presided over by the Sovereign. It is consulted on all legislative and many executive questions.

Education. Elementary instruction is both public and private. Secondary schools are of various kinds: Burgher Day-and-Evening schools (trade), Higher Burgher schools (non-classical and scientific), and Gymnasia (classical). Higher education is provided by one private university, five public universities, and many special schools.

Religious and sectarian instruction are separate. Private instruction is largely supported by the State.

Industries and Resources. *Agriculture:* In careful, intensive agriculture the Netherlands is surpassed by no other country. Grain, potatoes, sugar beets, and flax are the chief products. In the provinces of North and South Holland, large areas are devoted to market gardening and fruit and flower culture. The principal grains, according to the acreage devoted, are rye, oats, and wheat, in order named. Large areas are also devoted to peas, barley, and horse beans. Tulips and other flowering bulbs are exported. Over a third of the country is under permanent pasture for great numbers of the finest dairy cattle.

A project for draining the Zuider Zee will add about 817 square miles to the land area of the Kingdom.

Fisheries. Herring and oysters are the important catches.

Minerals. Coal is mined in the Province of Limburg.

Manufactures. Shipyards, breweries, distilleries, sugar refineries, vinegar factories, and salt works are the leading manufacturing establishments. Other industries are textiles, carpets, leather, paper, chocolate, pottery, gold and silver ware, and diamond-cutting.

Defense. *Army*: Peace strength, about 295,000. Men 19 to 40 years old chosen by lot for Army service. *Navy:* Four coast-defense ships, two cruisers; also gunboats, torpedo boats, and submarines.

Colonies. The possessions of the Dutch East Indies and the Dutch West Indies aggregate an area of about 788,336 square miles, and a population of 51,213,296. The most important possessions are Java, Sumatra, Dutch Guiana (Surinam), and Curaçao.

BELGIUM

Area. The total area is 11,780 square miles.

Climate. Belgium enjoys a cool and temperate climate, much similar to that of Holland. Ostende and Spa are famous resorts.

Population.

Year	Population	Year	Population
1890	6,069,321	1920	7,465,782
1900	6,693,548	1926 (est.)	7,874,601

Belgium is the most densely populated country of Europe (663 per square mile). French and Flemish are the official languages.

Religion. The constitution provides for full religious liberty and state support of all denominations. The population is almost entirely Roman Catholic.

Government. Belgium is a constitutional monarchy, governed by the King, Senate, and Chamber of Representatives. The Senate is elected in part directly by the people, and in part indirectly by the provincial councils. The lower house is elected by direct vote. There is a responsible ministry of twelve departments.

Education. Primary schools are supported by the communes. Secondary instruction is provided in Royal Atheneums and other segregated middle-class schools. There are four noted universities: at Bruxelles (Brussels), Gand (Ghent), Liége, and Louvain. There are numerous special technical schools, commercial high schools, and royal academies and institutions.

Industries and Resources. *Agriculture:* The agricultural districts are mainly in the north and west. The chief products are oats, rye, potatoes, wheat, barley, and beets. Dairying is well developed.

Large areas of the country were laid waste in the general European war, and agricultural pursuits suffered severely. The devastation caused famine conditions, which had to be relieved by foreign contribution.

Forests. Though large areas were deforested by the waste of war, there is still much forest land in Belgium. Before the war, forest products were over four million dollars in annual value.

Fisheries. The annual catch, principally herring, is valued at more than $1,200,000.

Minerals and Manufactures. The mines and manufactures provide a livelihood for the majority of the population. From Mons to Liége stretch the great coal fields which have attracted the extensive metal industries for which the country is famous. Iron, copper, zinc, and lead are also mined.

The principal manufactured products are pig iron, steel, motor cars, glass, artificial silk, lace, linen, and gloves. There are also many sugar manufactories, distilleries, and refineries.

In 1914 all industry was brought to a standstill by the German invasion, and vast destruction was wrought to manufacturing establishments and industrial centers, from which recovery is difficult and slow. Practically the entire country was occupied by the Germans, and tributes were levied on the cities. A large part of the population was driven to refuge in foreign countries.

Defense. *Army:* The army is made up by conscription and voluntary enlistment. In 1924 it numbered over 87,000 men. Conscripted men spend 12 or 13 months in active training, and are under military obligation for 25 years. The country maintains 189 military airplanes.

Navy: One ex-British sloop and 14 ex-German torpedo boats, the latter inactive, and 22 motor launches form the small naval force.

Colonies. *Belgian Congo:* The Congo Independent State was annexed to Belgium in 1907. The area, including part of former German East Africa, added 1920, is about 920,656 square miles; population, 8,512,795. The chief products are rubber, ivory, palm-nuts, palm-oil, white copal, and cacao. Coffee, rubber, rice, and cotton plantations have been established. Tobacco grows in all parts. Important minerals are gold, copper, and diamonds. Other minerals, coal, iron, tin, and manganese, are known to exist.

LUXEMBOURG

Area. Luxembourg has an area of 998 square miles.

Population. The population was 271,231 in 1926.

Religion. The inhabitants are almost entirely Roman Catholic.

Government. Luxembourg is a Grand Duchy. It was declared neutral territory and its independence and intregrity guaranteed by the Treaty of London, in 1867. It was, however, forcibly occupied by the armies of Germany in 1914. It is governed by the Sovereign, and a Chamber of Deputies elected by universal suffrage.

Industries and Resources. *Agriculture:* The majority of the people are engaged in agriculture, raising grain, fruits, and vines.

Minerals and Manufactures. The region is rich in iron ore. Other minerals are copper, lead, and antimony. The chief manufactures are iron and steel, beer, distilled liquors, paper, leather, gloves, and textiles.

GERMANY

On the defeat of Germany in the World War, the Empire was replaced by a Federative Republic dating from abdication of the Kaiser (November 9, 1918), who found asylum in Holland. Besides having largely to replace material losses and to pay enormous sums by way of reparation, Germany was stripped of about 31,780 square miles of European territory, and lost all her colonial possessions. See "Recent Changes in World Maps," at front of volume.

Area. The area is now 181,662 square miles. The Empire included about 208,780 square miles in Europe, and colonial possessions covered 1,035,000 square miles in Africa, 96,200 in Oceania, and about 3,000 in Asia.

Physical Features. In general terms, northern Germany may be described as largely a lowland plain. South of this is a central highland region, including the Harz Mountains and other chains; while the remainder of the Republic, to the south, is a great plateau diversified by mountains, hills, and tablelands. It is only in the Bavarian Alps, at the extreme south, that the snow-line is reached (highest elevation, the Zugspitze, 9,710 feet).

With the exception of parts of Bavaria and Württemberg drained by the Danube into the Black Sea, practically all Germany is drained into the North and Baltic seas. The great river of western Germany is the Rhine (length 810 miles), which rises in Switzerland. Draining Lake Constance through the depression between the Swiss and German Jura ranges, the Rhine flows at first westward, but turns at the French border, and runs north along frontier of Alsace and Baden to 33 about miles north of Strasbourg. Northwest of Essen it passes into the Netherlands, finally emptying into the North Sea. The Rhine is navigable for large vessels as far as Kehl, near Strasbourg, beyond which point boats use the Rhine and Rhône Canal. Its principal tributaries are the Neckar, Main, and Moselle. The Neckar (222 miles) skirts the eastern margin of the Black Forest, and, turning westward south of the Odenwald, reaches the Rhine at Mannheim. The Main (300 miles), which empties into the Rhine at Mainz after a zigzag course from the east, is navigable to Bamberg, from which point the Ludwig Canal carries shipping south to the Altmühl River of the Danube system, thus bringing the North and Black seas into direct communication. The other chief rivers are the Ems, Weser, and Elbe, flowing into the North Sea, and the Oder, into the Baltic. The Elbe (720 miles) rises in Czechoslovakia, and is swollen to large volume even before it breaks through the northern mountain barrier of the Bohemian plain into Germany. Ocean vessels ascend to Hamburg, and the river is navigable for smaller craft into Czechoslovakia. The Oder (552 miles), which reaches an arm of the Baltic at Stettin, affords navigation into Upper Silesia, and, with its largest tributary, the Warta, is navigable into Poland. The Vistula is navigable from the Gulf of Danzig, into the heart of Poland. Germany has a few small lakes in southern Bavaria, and a great many in the Baltic coastal plain. **Climate:** Germany as a whole is remarkable for the uniformity of its climate. The west has a mild climate like that of the British Isles. In the upland districts, winters are often severe, but the lower river valleys are delightful throughout the seasons. In the sheltered valleys of the Rhine and Main, subtropical fruits mature. The cold increases, however, toward the east. Rainfall averages 27 inches annually, being heaviest on the mountains, and there in summer. On the Harz Mountains it reaches 66 inches.

Population. The population, 1926, was 62,568,753. That of former Germany in Europe was about 65,000,000; of the imperial colonies, about 15,000,000. **Religion:** There is no State Church. All denominations are accorded liberty of conscience and complete social equality. About 60 per cent of the people are Protestant. **Education** is general and compulsory, the school age 6 to 14. Secondary schools include the town middle schools (for business) and the gymnasia (university preparatory); also technical, normal, professional, and industrial schools, etc. There are 23 universities.

Government. Germany is a Federal Republic comprising 18 individual Republics. Under the Constitution adopted July 31, 1919, all power of the State is derived from the people. Each state in the federation must have a republican constitution. Franchise is secret and universal (for both sexes). Powers of state are vested in the Reichsrat, or State Council (whose members represent the component states, and whose assent is necessary to all proposed legislation), and the Reichstag, or federal legislature (popular representatives elected for 4 years). The President of the Republic is elected by the people for 7 years, and appoints a Cabinet of Ministers responsible to the Reichstag. War and peace can be declared only by federal legislation. The referendum is provided. All subjects are equal before the law, and all privileges of birth, class, or creed are abolished. Freedom of speech, press, and meeting are guaranteed. Capital, Berlin (4,013,588).

Industries and Resources. *Agriculture:* Fully nine-tenths of all the land is productive. Most holdings are small, with peasant proprietors, but in the northeast, larger estates prevail. The leading crops in order of acreage, 1924, were hay, rye, oats, potatoes, wheat, barley, and sugar-beets. Other important crops are vegetables, flax, hemp, hops, tobacco, fruits (apple, pear, plum, cherry, apricot, peach), and nuts (walnut, almond). The vine-clad, terraced slopes of the valleys of the Rhine, Moselle, Neckar, and Main have long been celebrated for their wines. Stock-raising is prominent. Superior horses are reared on the Bavarian plateau and in the north. Saxony and Silesia are renowned for their wool. Great herds of Holstein and Friesian cattle are reared on the meadows reclaimed from the marshlands of the northwest coastal regions. Other stock comprise pigs, goats, poultry, and dogs. *Forests* occupy about 50,000 square miles, being thickest on the mountain slopes. About two-thirds are pine, larch, and firs, the remainder, foliage trees (oak, birch, ash, beech, etc.). The Scotch pine and white birch are characteristic trees in the northern plain. The most thinly wooded tracts are in the northwest. Great stress is everywhere laid on forestry, which is scientifically conducted under State supervision. *Minerals:* In mineral wealth, Germany is very rich. Westphalia, Rhenish Prussia, Silesia, and Saxony are the greatest producing sections, coal and iron being the chief products. There are silver-lead mines in Saxony, and zinc in Silesia, Westphalia, and Rhenish Prussia; the Harz Mountains are rich in gold, silver, lead, and copper. There are enormous rock salt deposits in Hannover and Saxony. Germany is also a great producer of potash salts.

Manufactures. Prior to the World War, Germany had surpassed all other European nations in rapidity of recent industrial development. The variety and volume of her output, and her enterprise in disposing of it, were one of the wonders of the modern world. The foundations of her progress were laid broad and deep, being based on her central position, her rich natural resources (especially of coal and iron), the length and completeness of inter-communication of her waterways, the degree to which the Government had fostered industry, the progress of scientific education hand in hand with material development, and, above all, the technical aptitude of the German people themselves, who excel in manufactures requiring expert knowledge, high dexterity, and precision of delicate adjustment. It is on these foundations that the new Germany of today is rising from the ashes of the great conflagration.

The iron industry is centered in Prussia, Bavaria, and Saxony; steel, in Rhenish Prussia. Saxony leads in textiles, but linen is produced also in Westphalia and Silesia; cotton goods in Bavaria, Baden, and Württemberg; woolens in Prussia, Saxony, and Bavaria; silks in Rhenish Prussia and Baden. Glass, porcelain, and pottery are made in Silesia, Thuringia, Bavaria, and Saxony; clocks and woodenware in Württemberg and Bavaria. Enormous quantities of beet sugar are refined in Prussia, Brunswick, Anhalt, Bavaria, etc. Alcoholic liquors are distilled chiefly in the potato-raising districts of the northeast, and beer is brewed in every part of the country.

Defense. On signing of armistice, November 11, 1918, the German Army numbered about 6,000,000 men. By peace treaty, the effective army is limited to 100,000. All fortresses west of a line about 31 miles east of the Rhine are to be demolished. No air force is permitted. A small navy on a volunteer basis is allowed, but no submarines. Germany's field losses in the War were nearly 6¼ million men (1,792,368 killed); navy losses, 65,341 (34,256 killed). Peace treaty with United States signed August 25, 1921.

NATIONAL GALLERY, BERLIN, GERMANY

BRIDGES, OLD AND NEW

Berlin, capital of Prussia and of the German Republic, is one of the most magnificent cities of the world, and one of the most rigidly governed, as even the transient visitor soon discovers. Situated on both banks of the rather insignificant Spree, it covers an area of about twenty-five square miles. The river is spanned by numerous bridges, some quite modern and others reconstructed on the exact lines of the bridges which were built centuries before. Most of them have imposing groups of statuary or other embellishment.

As in other historic cities, the old and the new quarters are strikingly dissimilar. Here the old town is gray, business-like, somewhat forbidding, while the new is gay and splendid. The streets present a fine appearance, even the elevated street-railway having been built with an eye to beauty as well as usefulness. Unter den Linden, with the extensions not commonly distinguished from it in the visitor's mind, is one of the great streets of the world. From the Brandenburg Gate, the entrance to the town from the Thiergarten, to the former Royal Palace, a mile away, it is flanked by stately palaces, fine hotels, and attractive shops. Down the middle of Unter den Linden proper is the avenue of linden trees, whence the name of the thoroughfare is derived.

The city architects are much given to colonnades. Many buildings have this feature—the National Gallery, built on the order of a Corinthian temple, is an example—and it is further used in the beautifying of the many parks by Doric colonnades sometimes hundreds of feet in length.

In Yugoslavia is the quaint city of Mostar, capital of the old Austrian province of Herzegovina. The city derives its name from the unique bridge here built over the Narenta, which dates from the 15th or 16th century, *most* signifying bridge and *star* old. Mostar lies in a narrow valley of wild and rugged beauty. Situated off the beaten track of tourist travel, the city and its ancient bridge are not visited by the countless throngs of tourists to whom Wien (Vienna), Budapest, and other famous places are familiar ground. Those who are so fortunate as to visit Mostar to-day wonder what the picturesque town was like when the "old bridge" was new, and they find themselves thinking, with Longfellow, "how many thousands of care-encumbered men, each bearing his burden of sorrow, must have crossed the bridge since then."

FOOT-BRIDGE AT MOSTAR, YUGOSLAVIA

SWITZERLAND

Area. Switzerland has a total area of 15,940 square miles, or about twice that of the state of Massachusetts.

Climate. The country presents great contrasts in temperature and rainfall, owing to wide range of elevation. The mean annual temperature ranges from 53° at Lugano (elevation about 900 feet), to 29° in the great St. Bernard Pass (8,111 feet). In the St. Théodule Pass (10,899 feet), winter conditions are practically continuous. In the lower regions, on the other hand, as in Italian Switzerland at Lago Maggiore, winter lasts but three months. At Bern, the mean is 46.8°, ranging from 64.8° in July to 29.4° in January; rainfall, 39.61 inches.

Precipitation (rain and snow) varies from about 87 to about 22 inches. Conditions of precipitation are influenced greatly by the mountainous conformation.

Climate and scenery attract tourists from all parts of the world to Switzerland. Over four per cent of the country is under snow and ice, and there are over 450 glaciers. All the picturesque lakes of the Swiss Alps, except Lake Geneva (which empties into the Rhône), are drained by the River Rhine, but some waters from the southern and eastern slopes, respectively, find their way to the Adriatic through the River Po, or to the Black Sea through the Inn and Danube.

Population.

Year	Population	Year	Population
1890	2,917,754	1912	3,781,540
1900	3,315,443	1920	3,880,320
		1927 (est.)	3,959,000

About 68 per cent of the inhabitants speak German, over 21 per cent speak French, about 8 per cent Italian, and 1 per cent Romansh.

There were 402,385 foreigners resident in Switzerland in 1920. The largest city is Zürich; and the largest canton in population, though second in area, is Bern.

Religion. Complete religious liberty prevails in the Republic, except as affecting the Jesuits. The order of Jesuits and affiliated societies cannot be received anywhere in the country, and this interdiction can be extended to any other religious order if deemed necessary by the State. New convents or religious orders may not be established.

Protestants are in the majority in twelve cantons, the total number being about 57 per cent of the population. Roman Catholics comprise about 41 per cent, and are in the majority in ten cantons.

In Switzerland the Protestant Church is Calvinistic-Presbyterian.

Government. Switzerland is a Republican confederation of twenty-two cantons. Three of the cantons, Unterwalden, Appenzell, and Basel are subdivided in halves. The independence and the legislative powers of the cantons are not restricted by the Federal Government. Each is locally governed on the basis of absolute popular sovereignty.

The first magistrates of the Confederation are the President, and the Vice-President of the Federal Council, both elected by the Federal Assembly for one-year terms. They are ineligible for re-election for one year after retirement.

The Federal Assembly consists of the National and State Councils chosen by popular suffrage. In it is vested the supreme legislative and executive authority of the Republic. The State Council is composed of two members from each of the twenty-two cantons. Where cantons are divided, each part sends one member.

The National Council is composed of a membership on the basis of one deputy for every 20,000 inhabitants, elected by popular suffrage. The initiative and referendum are in vogue in many cantons.

The Federal Council consists of seven members elected for three-year terms by the Federal Assembly. To this is deputed the chief executive authority, and this body alone may introduce legislative measures to the Assembly.

Each canton is divided into districts, and in each, for the management of local affairs, is a council. In the larger cantons is an assembly in addition to the council.

Education. Primary instruction is free and compulsory. The law is, however, not entirely in force in the Catholic cantons. It is rigidly carried out in the cantons where Protestants are in the majority. The educational system is not centralized, the cost falling on the cantons or on the cantons and communes. Secondary schools and technical institutions are numerous and efficient.

There are seven noted universities, organized on the model of those in Germany. They are located at Basel, Zürich, Bern, Genève, Lausanne, Fribourg, and Neuchâtel.

Industries and Resources. *Agriculture.* About 22.4 per cent of the total area is unproductive. The productive area, including pasture land, arable land, and forest, is very equally divided among the population.

Only about 16.5 per cent of the area is under crops. The principal crops are wheat, rye, oats, and potatoes. Large areas are devoted to vineyards, and large quantities of wine are produced in five of the cantons. Barley, corn, tobacco, sugar beets, and vegetables are also raised. Ranked according to acreage, the principal crops are wheat, oats, rye, vines, barley, and maize. The greatest acreage, however, about 20 per cent of the productive area, is in pasture land, and the chief agricultural industry is dairying. Switzerland is noted for the quality and amount of cheese produced. Large quantities of condensed milk are also prepared for export. Beekeeping also is extensively carried on.

There were 1,425,341 cattle in 1921, besides large numbers of pigs. goats, sheep, and horses. The cattle graze in summer on the mountain pastures, or "alps," and in winter are brought to lower levels and fed on hay mown in the low-lying fields or on imported forage.

Forests. Forest land aggregates 3,762 square miles, over two-thirds of it under cantonal or municipal control. By a law passed in 1876, certain areas, comprising more than half of the total, are maintained intact for their climatic influence.

The species are chiefly maple, beech, and pine. New areas are planted where deemed necessary. Free forests comprise about 1,477 square miles.

About 16,000,000 trees, most of them coniferous, are planted each year.

Fisheries. The lakes and water courses of Switzerland provide fish in considerable quantities. In 1923, there were 211 establishments engaged in the hatching of food fishes, and large quantities are produced for home consumption.

Minerals. Salt is the chief mineral product. There are two salt mining districts. Marl, clay, and limestone are also found, and used in making cement. Asphalt is worked in Neuchâtel. Some iron, copper, and lead are produced. The discovery of rich iron ore deposits was announced in 1920.

Manufactures. The textile industries combined are the largest and most important branch of manufacture—silks, cottons, linen, woolens, lace, embroideries, and clothing manufacture. Silk and cotton goods comprise nearly half the total value of the country's exports

Other important manufacturing industries are watch, clock, and jewelry making, woodworking, and metal working. There are large machinery plants, breweries, chemical works, and provision factories. Shoe making, wood carving, and making of gloves, pottery, and tobacco products, are also thriving pursuits. Clocks are the third greatest export, the number exported in 1923 being 14,367,579.

Resorts. The greatest industry in Switzerland from the standpoint of receipts is the entertainment of tourists and providing them with accommodations. About $160,000,000 is invested in hotels, numbering over 1,900, and over 80,000 people are employed in the maintenance of these establishments.

Switzerland is noted the world over for the grandeur of its scenery, and its fine climate. It is estimated that more than a million and a-half of people visit the country annually.

Bern, capital, had 107,960 inhabitants, December 1, 1925.

Defense. The military forces of Switzerland are a national militia, in which service is compulsory and universal. Except because of physical disability, all are liable to service from the twentieth to the forty-eighth year.

The country is divided into six divisional districts. The field army totals about 140,000 men, with separate garrison forces of about 21,000 men. Fortifications have been erected for the defense of the St. Gothard Pass, and at St. Maurier and Martigny in the Rhône Valley. The total war strength approximates 260,000 men.

ITALY

Area. The total area is about 119,703 square miles, including Sicily (9,935), Sardinia (9,299), and Austrian and Turkish additions resulting from World War. Italy proper, about 91,390 square miles.

Climate. The climate of Italy makes it one of the most popular winter resorts in the world. Though in a warm latitude, large districts are tempered by the mountainous conformation. Some parts experience mild winters like those of England. Approaching the sea from the high altitudes inland, the naturally high temperatures and luxuriant vegetation of the latitude prevail. The southern extremity is very hot, and in some districts malarial.

Famous winter resorts: San Remo, Alassio, Napoli (Naples) Venezia (Venice), Sorrento, Capri, and Palermo.

Famous summer resorts: Lido, the Lake Region, Lucca, Varese, and Vallombrosa.

Population.

Year	Population	Year	Population
1881	28,459,628	1913	35,238,997
1901	32,475,253	1927	40,584,583

In race the Italian nation is remarkably homogeneous. In the Alpine region are found the only non-Italian races—namely, French about Aosta, Germans in a few Alpine valleys, and Slovenes on the Austrian border. In the northeast is a divergent type of the Italian stock, the Friuli (about Udine); these people speak a language of mixed Latin and Celtic origin. The north Italians are of good stature, often have fair complexions and blue eyes, and are industrious and enterprising. The Italians of the south are stocky, often stunted, swarthy, and on the whole less progressive. The more desirable qualities of the north Italians are due largely to the healthier climate and the greater natural wealth of that section.

In 1923, emigrants from Italy numbered 389,957, of whom 184,684 went overseas. The emigrants are chiefly unskilled laborers, and peasants dissatisfied because of a burdensome system of land taxes. Southern Italy contributes most heavily to emigration. Campania, Sicily, and Calabria have lost great numbers of their young men and women by emigration, but a rapid birthrate has prevented any decrease in population. Of the 97,800 Italians who entered the United States in 1920, 84,882 came from Southern Italy.

Religion. The state religion is nominally Roman Catholic, but there is complete freedom of worship for all faiths.

The Supreme Pontiff (Pope) of the See and Church of Rome resides at the Vatican, which, together with the Lateran Palace and the Castel Gandolfo, has the privilege of extra-territoriality. The Pope has as advisers the Sacred College of Cardinals.

Diplomatic relations between the Vatican and Quirinal, suspended for about 50 years, were resumed in 1921.

Government. Italy is a constitutional monarchy, governed by the King and a Parliament comprising a Senate and Chamber of Deputies. The Senate is composed of the princes of the royal blood over 21 years of age, and an unlimited number of members over 40 years of age who are nominated by the King for life. The Chamber of Deputies, 1927, consists of 560 members over 30 years of age, elected by universal adult suffrage for five-year terms. Executive power, under the King, rests in a ministry of 15 departments.

The local government is administered through 93 provinces. These provinces are subdivided into territories, districts, and communes.

The *States of Italy* before its unification (1859-70) were:

Sardinia. Approximately equivalent to Sardinia, Piedmont, Liguria, and that part of Lombardy west of the Ticino and of the Po River. Nice (*Nizza*) and Savoy, now French, also belonged to this kingdom.

Lombardy and Venetia. All of Italy east of the Ticino and north of the Po River.

Parma. Emilia from Guastalta and Fivizzana westward, also Lucca (*Tuscany*).

Morena. Central Emilia and Massa (*Tuscany*).

Tuscany. As at present, except the districts of Lucca and Massa.

Papal States. Eastern Emilia, Marches, Umbria, Roma, and the cities of Pontecorvo and Benevento.

The Two Sicilies. Sicily, Calabria, Basilicata, Apulia, Abruzzi, Molise, and Campania except Pontecorvo and Benevento.

Education. Public instruction is regulated by the State, which alone and in conjunction with the local governments, maintains free schools of every grade. Elementary education is given in the three grades: preparatory, secondary, and higher, totalling eight years. There are 24 universities, four of which are free, besides three institutions of university rank, seven institutes of commercial education, three of agriculture, five engineering colleges, two naval colleges, and schools of forestry, social science, oriental languages, veterinary colleges, women's training colleges, and an institute for instruction of illiterate adults.

Industries and Resources. *Agriculture:* Ninety-one per cent of the land area of Italy is under crops, and is held principally under one of three systems: peasant proprietorship, partnership, or rent.

Grapes occupy the greatest acreage. The twelve million acres devoted to the vine, equal a fifth of the entire cultivated area. The wine output varies, but averages between 500 and 1,000 million gallons a year. Over 11,000,000 acres are given over to wheat each year. The grain is grown in all parts of the country, but the greatest production is in the Po Valley. Olives are produced on over 1,000,000 acres, principally in the south. Over three and a half million acres are devoted to corn, principally in the north, in the Po Valley. Six million acres are given over to beans and another million to oats. Potatoes, barley, rice, rye, and sugar beets are extensively grown.

Sheep and cattle are numerous, especially in the north along the Po Valley.

Silk culture is carried on in all parts of the country, most intensively in Lombardy, Piedmont, and Venezia. In 1923 over 16,500 tons of cocoons were produced.

Forests. Forests cover in large part the middle and higher slopes of the Alps and Apennines. Hardwoods, chiefly oak, beech, chestnut, poplar; softwoods, silver fir, spruce, pine, larch. Normal cut, about 1,187,200,000 feet annually.

Minerals. About three-fourths of the world's sulphur comes from Italy (chiefly Sicily). Other minerals are: building and sculptural stone—granite (Piedmont); marble (Carrara, Massa, etc., from Tuscany); lignite, pyrites, lead, zinc, iron, copper, manganese.

Manufactures. Italy is almost without coal, but has, especially on the Alpine slopes, splendid water-power. The north has therefore become the great manufacturing region of the country.

Machinery is manufactured at Milano (Milan), Torino (Turin), Napoli (Naples), silk at Como, Milano, Bergamo, Torino, and Venezia (Venice); cotton at Piedmont, Liguria, Campania, Lombardy, and chemicals at Milano, Genova (Genoa), Torino.

Other important products of industry are: lace, leather, furniture, art goods, rubber, fruits, wine, automobiles, straw hats.

Defense. *Army:* Active, 1921, 250,000 men. Military service is compulsory. Liability to service is from the age of 20 to 39. Actual service with the colors is for 18 months.

Navy: The Navy consists of seven battleships (two for coast defense), three armoured cruisers, ten light cruisers, sixty-five destroyers, fifty-eight torpedo boats and forty-four submarines, and 41,000 men.

Air Force: The Air Force was created in 1923. It includes 1,500 planes, 850 of which were available for active service in 1924.

Colonies. Italy's colonies, except Tientsin (Chinese concession) and Rhodes are all located in Africa. They comprise Eritrea, Italian Somaliland, Tripolitania and Cirenaica. The population of all the colonies is approximately 1,809,435. Area, 801,485 square miles.

SAN MARINO

Area. The area of San Marino is 38 square miles.

Population. The population, June, 1925, was 12,812.

On Emilia-Marches border, near Adriatic. Republic governed by elected Great Council of 60 members (two appointed Regents). Independent since 1231, claims to be oldest state in Europe. It maintains an army, makes foreign treaties, and issues its own coins and postage stamps. Wine and cattle are the chief products.

TIFLIS, CAPITAL OF GEORGIA, TRANSCAUCASIAN U.S.S.R.

THE SPOILS OF ANCIENT WARS

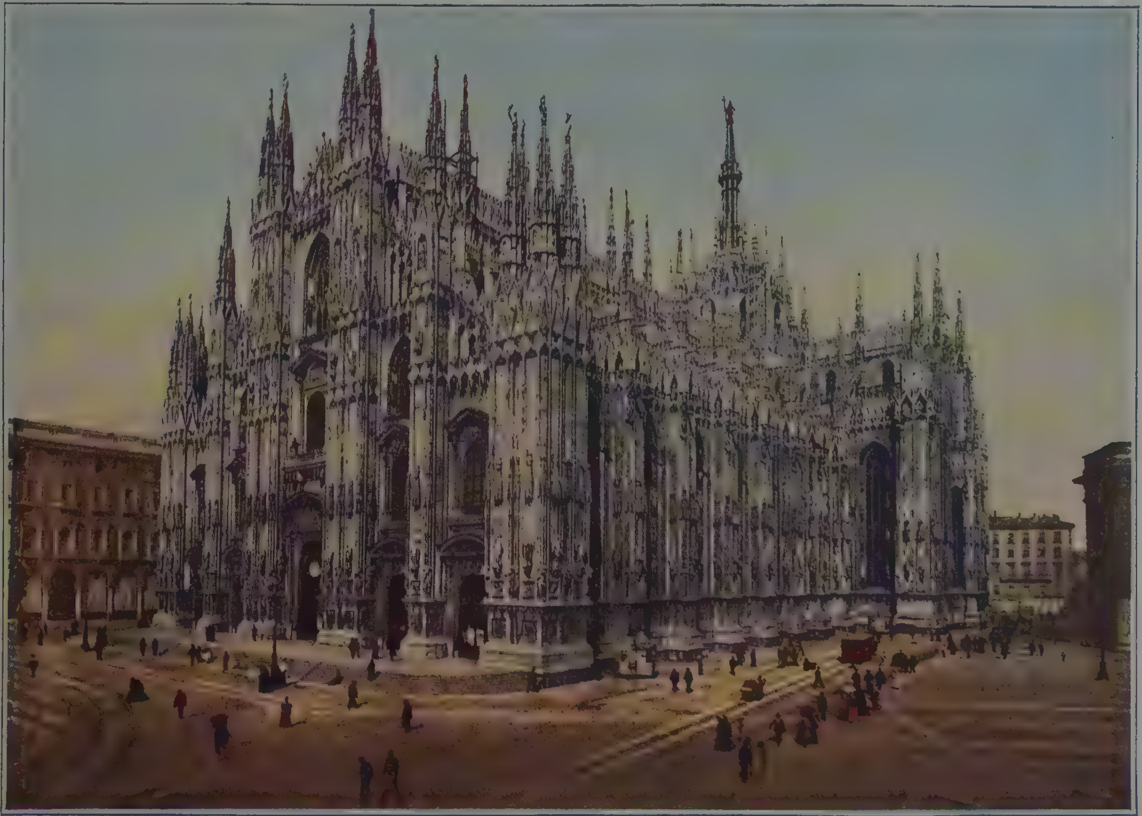
Nestling at the foot of the Caucasus Mountains, lies the oriental city of Tiflis, capital of the Soviet Republic of Georgia proclaimed independent, 1918, and now in the Soviet Union. Formerly subject to frequent plunder at the hands of hostile neighbors, Tiflis became, under Russian rule, a great modern city. It still retains its picturesque ancient quarters and has a great number of churches of extreme age, but there are modern hotels, theaters, banks, schools, museums, fine shops, and public gardens.

The native workmen are skilled sword makers, gunsmiths, and silversmiths. A considerable number of the inhabitants belong to that ill-fated race—Armenian. These have their own section of the city, as have the Russians, the Germans, and the remaining masses of Orientals, Jews, and Mohammedans.

Also long-suffering through the wars of many centuries, and a dependency at one time or another of France, Spain, and Austria, besides being for a long time independent, the beautiful city of Milano, Italy, is to-day second in size only to Roma. It has important manufactures—especially silks, velvets, and ribbons—and is the chief publishing center of Italy. Milano is best known to travelers for its famous cathedral, a magnificent Gothic structure which will hold 40,000 persons. The exterior is a marvel of beauty, appearing almost fragile in its multiplicity of lacy carvings and pinnacles, slender statues—two thousand in number—and grinning gargoyles. It has been called "frozen music" by the awed traveler of mature years; children have called it "like a wedding cake."

In the crypt under the choir lies the body of the cardinal saint Carlo Borromeo, who consecrated the cathedral and whose memory is revered through the years for his self-sacrificing work during the great plague. The immense cross which he carried during his ministrations hangs in the cathedral. His body rests in a marvelous glass and silver shrine, and is vested in full pontifical robes, a blaze of jewels presented by devotees, both royal and humble.

This cathedral stands somewhat sternly aloof from the surrounding buildings. The square on which it fronts—the Piazza del Duomo, named for the cathedral—is, nevertheless, the focus of the busy life of the great city.



MILANO (MILAN) CATHEDRAL, ITALY

DENMARK

Area. Including The Faeröes, which have a total area of 540 square miles, Denmark comprises a total of 17,144 square miles. Of this total, the Jutland peninsula has 11,443 square miles, the islands in the Baltic, 5,133, and the city of Köbenhavn (Copenhagen), 28.

Climate. Denmark experiences a rather mild climate, due to the fact that the greater part of the country is exposed to the tempering influence of the sea. The mean annual temperature for the whole country is about 45° Fahr., the mean for the winter being 32.8°; and that for the summer, 59°.

Rainfall varies considerably in different localities and different years. It is highest on the west coast, and ranges from about 16 inches on the island of Anholt, to a maximum of 28 inches in Jutland. Precipitation is heaviest in September, and lightest in April. A salt mist is prevalent on the west coast; and in May and June a dry, cold wind called the *skai* blows from the northwest.

Population.

Year	Population	Year	Population
1911	2,775,076	1921	3,289,183
		1926 (est.)	3,434,555

Denmark has tripled its population in the last century. The inhabitants are almost all Danish, only 3.27 per cent being listed as foreign-born. The proportion of rural to town population is about 17 to 12.

Religion. The state religion is Lutheran, though there is complete religious toleration. There are about 22,000 Roman Catholics, 5,000 Jews, and 17,000 miscellaneous or of no confession.

Government. Denmark's government is that of a limited monarchy based on a constitution. The executive authority is vested in a King, assisted by a responsible ministry of ten members. The parliament (*Rigsdag*) consists of two houses, *Landsting* (Senate) and *Folketing* (House of Representatives). Though the Landsting is now conservative in spirit, the constitution contains no indication of any difference between the two chambers. The Landsting has now 75 members, elected indirectly for a term of eight years, through electors chosen by men and women voters 35 years of age and over who have a fixed place of abode.

In the parliament, acting in conjunction with the King, is vested the right to make and amend laws.

The right of suffrage is possessed by every man or woman 25 years of age and over who has a fixed place of residence.

The Folketing has 149 members, returned by direct election and universal suffrage. Its full term is four years.

For local government, the country is divided into eighteen counties (*Amter*), each administered by an *Amtmand* (Governor). Moreover, there are divisions into urban and rural municipalities, each having its own Council.

Köbenhavn (Copenhagen) forms a district by itself, with a special form of administration. The relief of the poor and the aged is provided by law.

Education. Elementary education has been compulsory in Denmark since 1814. The public schools are maintained by communal rates, and are free, with the exception of a few secondary schools in towns where a moderate fee is paid.

There are a large number of secondary and grammar schools, besides peoples' high schools, agricultural and horticultural schools, a college of pharmacy, a Royal academy of arts, and a Polytechnic institution. The University of Copenhagen, founded in 1479, is a noted institution.

Liberal government grants are made to all schools, public and private, besides temporary subventions to individuals for study or travel.

Industries and Resources. *Agriculture.* Eighty per cent of the total area of Denmark is productive. Most of the land is freehold. The small-holding law prohibits the union of small farms into large estates, encouraging the parceling-out of landed property. Of the productive area, about six per cent is forest land.

The greatest acreage is devoted to oats. Mixed grains are given the second greatest acreage, and barley the third. Large and increasing areas are given to beet-root. Other important crops are wheat and potatoes.

Stock-raising for export dairy purposes is becoming of great importance in Denmark. Assistance by the Government has done much toward the development of this industry. Cattle, swine, and horses are most numerous of the live stock. Butter, eggs, and bacon comprise about seven-eighths of the total exports, which are principally to England, butter alone comprising about 40 per cent.

Cooperative systems of farming, farm credits, dairies, and marketing are in general use, and the Government annually votes a sum for loans to those who wish to purchase small freehold plots of land.

On The Faeröes, about three per cent of the land is under crops, and herds of sheep are kept on the many pastures. The chief industry of the islanders is fishing.

Forests. The forests consist mainly of beech trees. They are under strict government control. Large areas in Jutland, principally in the heath lands, are being planted with pine trees. The forest area in Denmark totals about 850 square miles.

Beech trees flourish better in Denmark than in any other European country. In the island of Bornholm, however, the principal species are the pine, birch, and ash.

In Jutland are large areas of peat bog, which supply the inhabitants with most of their fuel.

Fisheries. The fisheries in coast waters provide an extensive food supply to the population of Denmark. Inland waters are also well stocked. Over 15,500 boats were engaged in fishing in 1922.

Mineral Resources. Minerals found in Denmark are insignificant when compared with those found in other European countries. Clays are abundant, however, and in Bornholm are quarries of marble and freestone.

Manufactures. The manufacturing establishments are engaged in supplying mainly local needs. Among the most important are the iron works, manufacturing machinery, engines, and iron ships. Other large industries are the distilleries and breweries, sugar refineries (the latter increasing in number), woolen and cotton mills, paper mills, glove factories, tobacco factories, brick and pottery plants. A notable industry is the manufacture of porcelain, which has attained considerable artistic merit and fame.

Dairying is the great national industry. Butter, for which Denmark is noted, is most important of the dairy products. Large quantities of margarine and oleomargarine are also manufactured. Slaughtering and meat-packing is an important industry.

Defense. The military system of Denmark is that of a national militia, in which service is compulsory. Exemptions are few. Service commences at the age of twenty, lasting for sixteen years. The period of training is 165 days in the infantry, 215 days in the field artillery, one year in the garrison artillery, and 425 days in the cavalry. The initial training period is prolonged by from two and one-half to eight and one-half months for about one-fourth of the men. Subsequent training periods of 28 days occurs twice during the remaining years of service.

The peace strength of the army is about 78,000 men and officers; of the field army, approximately 60,000 men. It is estimated that in case of war a force of 183,000 men could be assembled.

The navy is maintained for coast defense. It consists of 3 monitors; 2 old cruisers (for training); 14 mine-layers; 1 sloop; 23 first-class torpedo boats; and 14 submarines.

Colony. The only colonial possession is Greenland, an island off northeastern North America, lying almost wholly within the Arctic Circle. It is largely buried under an ice-sheet, source of the Atlantic icebergs. Only the south and west coasts up to about 73° N. lat. are habitable. The total area is about 837,620 square miles; ice-free area, 46,740 square miles. Population, 14,355. The principal exports are seal and whale oil, cod liver oil, seal, fox, and reindeer skins, eiderdown, and walrus ivory.

Denmark's former West Indian dependency, the Virgin Islands (Danish), was sold to the United States in 1917. For details, see "Territorial Growth of the United States."

Iceland, a former Danish island dependency, was granted independence in 1918, with guarantee of permanent neutrality. For the time being, the present King of Denmark is acknowledged also as sovereign of Iceland. For details, see elsewhere page devoted to "Europe," under head "Iceland."

SWEDEN

Area. Sweden has an area of 173,105 square miles.

Climate. Owing to the wide range of latitude, the extremes in temperature vary considerably north and south.

In the extreme north the mean annual temperature is 26.6° Fahr. At the southern extremity, it rises to 44.6°. Temperatures vary also according to the elevation. The range between extremes for summer and winter is greatest in the north interior, where the average for winter is 3.8°. This rises in parts of the south to 32°. The July temperatures are more uniform all over the country.

Rainfall, heaviest near coast, averages about 20 inches annually. It ranges from about 17 inches in the north, to 40 to 45 inches in the south.

Population.

Year	Population	Year	Population
1910	5,522,403	1920	5,904,489
1926 (est.)	6,074,368		

With the exception of some 35,000 Fins, Laps, and other foreigners, the Swedish population is entirely of Scandinavian stock. Emigration is chiefly to the United States.

Religion. The state church is Lutheran, but there is complete religious toleration. The population is almost entirely Protestant, there being only about 3,000 Catholics and 6,000 Jews in the realm.

Other sects are Irvingites, Mormons, and Greek Catholics, all insignificant in number.

The King must be a member of the Lutheran Church.

Government. Sweden is a constitutional monarchy, administered by the King, Cabinet (*Statsråd*), and Parliament (*Riksdag*). The Parliament consists of two chambers: the First Chamber, with 150 members elected by provincial representations and certain town electors, is composed of the wealthier inhabitants; the Second Chamber, of 230 members, is elected by universal suffrage.

Members of the First Chamber are chosen for eight-year terms, and of the Second, for four-year terms.

The country is divided into 24 departments for provincial administration. Over each of the departments (*Lān*) is a prefect, nominated by the King. Each Lān has a county council regulating internal affairs. Women are eligible to communal offices.

Education. Sweden possesses an excellent system of public instruction. Especially noteworthy are the trade and continuation schools. There are two state and two private universities.

Public elementary instruction is compulsory and free.

Industries and Resources. *Agriculture* employs about half the population of Sweden. Over nine per cent of the total land area is now under cultivation, an area which is constantly increasing by the reclamation of extensive wet lands.

Oats and rye are raised most abundantly; potatoes, wheat, barley, beans, peas, and sugar beets are also important products.

In recent years, neat cattle have become an important article of export. Sheep, pigs, and horses are numerous.

Forestry. About 58 per cent of the area of the country is forested. Timber and its products (lumber, pulp, paper, etc.) constitute fully half of all exports. Timber resources are carefully conserved.

Minerals. Sweden is one of the chief producers of iron ore in Europe. Large quantities of silver and lead ore, zinc ore, manganese ore, sulphur, and a little gold are produced. Large deposits of coal are found in the south.

Manufactures are not very extensive, but have a great potential future in the vast water-power of the country. Iron and steel industries, sawmills, flour, paper, and sugar mills, match factories, porcelain and glass factories are the leading establishments.

Defense. *Army:* Peace establishment, 1924, 400,000; field army, 35,946, with about the same number of reserves. About 625,000 men are listed on the rolls, including the first and second ban and the Landstorm. The militia is recruited on the universal service principle. Liability to service is from the age of 20 to 42. The initial training period varies according to the arm of service.

Navy: Coast-defense vessels and cruisers, 12; torpedo boats and destroyers, 40; submarines, about 17. The personnel of the Royal Navy on the active list numbers about 5,800 men and officers.

NORWAY

Area. The area of Norway is 124,984 square miles. Svalbard was allotted to Norway by the Peace Conference, 1919 (see "Recent Changes in World Maps," at front of volume).

Climate. Warm ocean currents make the climate more moderate in the long winters than might be expected so far north. In the interior, however, especially the northeast, the winters are severe, 60.5° below zero being recorded. The mean annual temperature in the south and west is about 45°. The winter mean in northern Norway is about 2.5°.

Rains and fogs are frequent on the coast. Precipitation varies greatly in different localities; heaviest on coast, decreasing inland. The maximum annual average is 83 inches; the minimum, 12 inches. Rainfall along the coast diminishes northward.

In Norway there is a period of 3½ months without complete darkness, and at North Cape the sun is visible above the horizon continuously from May 12 to the last of July.

Population. The population, census of 1927, was 2,788,893. It is preponderatingly Norwegian, but contains some 47,000 Swedes and 19,000 Laps, besides some Germans and Finns.

Religion. The state church is Evangelical Lutheran, but all forms except the Jesuit are tolerated. Practically the entire population is Protestant, there being only about 2,600 Roman Catholics.

Government. A constitutional monarchy, governed by the King and the Parliament (*Storting*). The Storting consists of a *Lagting* (upper house) and *Odelsting* (lower house). Suffrage is universal. Women are (since 1913) entitled to vote under the same conditions as men.

The two houses of Parliament are not elected separately. When Parliament assembles, it divides itself, one-fourth of the members composing the Lagting, and the remainder the Odelsting. The King is the chief executive, exercising his authority through a Council of State composed, 1920. of nine Councilors and the Minister of State. For provincial administration, the country is divided into twenty districts (*Fylker*), each under a chief executive (*Fylkesmann*).

Education. School attendance is compulsory, and the standard of education is high. Schools are supported locally, with the assistance of state subsidies. Primary schools are free.

There is a university at Oslo, formerly Kristiania, and many private and special schools.

Industries and Resources. *Agriculture* is the occupation of one-third of the population. Chiefly small grains and forage crops are produced. About 3.5 per cent of the total area is under cultivation, and 75 per cent is unproductive. The leading grains are oats and barley. Potatoes and hay are raised in large quantities. Other crops are wheat, rye, and mixed corn.

Stock-raising is an important industry, sheep being most numerous of the live stock. There are also many cattle, pigs, goats, horses, and, in the north, reindeer.

Forests. Seventy-five per cent of the forests are pine, large quantities of which are exported. Other principal trees, spruce and birch. Lumbering is carefully supervised by the Government. Forest areas comprise 27,434 square miles, or nearly 22 per cent of the total.

Fisheries. Fishing provides a livelihood for about five per cent of the people. Cod, herring, mackerel, salmon, and sea trout abound, and the oyster and lobster catch is considerable. Whale, walrus, seal, and shark fisheries are also important.

Minerals. The minerals are silver, pyrites, copper, iron, nickel, cobalt, lead, aluminum, zinc, granite, marble, soapstone, slate, feldspar, and apatite (phosphate of lime).

Manufactures. Sawmills, wood-pulp mills, and smelters take the lead, but coal deficiency and abundance of water-power are stimulating electro-mechanical, chemical, and metallurgical industries.

Defense. *Army:* Peace establishment, 5,142; war strength, 324,422. Military service in the National Militia is compulsory and universal, with exemptions, age 18 to 55. Men are called out at 21, initial training covering 48 to 102 days.

Navy: Coast-defense vessels, 4; torpedo boats and destroyers, 32; gunboats, 1; submarines, 10; mine-layers, 3. Active personnel, about 1,200 men and officers.

UNION OF SOCIALISTIC SOVIET REPUBLICS

The Russian Empire entered the World War on the side of the Allies. In March, 1917, a revolution broke out, and as a result Emperor Nicholas abdicated. A provisional government was set up, and after two reorganizations was seized on November 7th by the Military Revolutionary Committee, and the next day turned over to the All Russian Congress of Soviets. In December Russia surrendered to the Central powers, and in July, 1918, by Soviet order, the Czar and his family were executed at Ekaterinburg. Various sections of the Empire took advantage of the opportunity to declare their independence. As explained in "Recent changes in World Maps" at the front of this volume, most of the territory formerly in the Empire is now included in the Union.

Area. The area of the U. S. S. R. is estimated to be 8,186,144 square miles, and includes 6,409,191 square miles of Asiatic U. S. S. R.

Physical Features. The surface of the Union is in general a succession of lowland plains, deeply cut by ravines, and sloping gradually toward the Baltic, White, Black, and Caspian seas. It attains a height of 1,100 feet in the Valdi Hills (between Leningrad and Moskva (Moscow) from which as a center most of the large rivers radiate. The Ural Mountains are a natural boundary with Asia on the East. The Caucasus Mountains are by some considered the Asiatic boundary at the south. The Volga, over 2,200 miles long, and navigable almost to its source, is the largest river in Europe, flowing through the heart of U. S. S. R. east and southeast into the Caspian Sea. The Dnieper (1,200 miles) drains into the Black Sea an area in the southeast about as large as France. Lake Ladoga, on the Finland border, is the largest lake in Europe, covering 7,000 square miles.

In Asia, the surface of the country presents a series of mountains, plateaus, fertile plains, and treeless tundras. It comprises three natural divisions. At the south, a highland region culminates in mountain chains along the borders of Persia, Afghanistan, and China. The Arlo-Caspian basin of Turkestan merges into the Kirghiz steppe on the north. The vast northern region of Siberia extends from the Urals east to Bering Strait. The tundras along the Arctic are constantly frozen, but bear moss, lichens, and stunted shrubs and provides fair pasturage in summer. South of the tundras is a large forest area merging into the fertile plains and plateaus of the steppes.

Climate. The climate of European U. S. S. R., despite the latitude through which the country extends, is very uniform, with hot summers and cold winters, the seasons varying in length in different locations. Rainfall ranges from 14 inches in the south to 25 inches near the Baltic, but decreases rapidly toward the east. Periods of drought in the interior, aggravated by poverty and improvidence of the peasants, and by collapse of the machinery of distribution, are apt to bring very serious famine, as in 1891, 1900 and 1921. Asiatic U. S. S. R. has a climate that is on the whole more severe. Winters are colder and longer, and summers in the interior are hot.

Population. The Russian Empire had a population of 182,182,600 in 1915. In 1926 the population of the Union of Socialistic Soviet Republics was estimated at 144,815,000. Of this number 102,010,302 were in the European U.S.S.R. There were about 25,000,000 in cities.

Religion. Under the Soviet government there is no state religion. All religions may be freely professed, and churches leased free from the State. The great majority of the people belong to the Graeco-Russian church, the state religion under the Empire. There are also many Roman Catholics, Lutherans, Mohammedans, and Jews.

Education. All education, including the state theaters, art and musical institutions, and specialized schools, is directly controlled by the Commissariat for Education, and no private schools are permitted. Unified labor schools take the place of elementary schools. These are of two classes, for children 8 to 11, who are taught to be self-supporting, and for children 11 to 17, who are given a technical training enabling them to carry on the industries of the country. Attention is also given to pre-school training and to the training of defectives. Trade schools and universities are maintained, special attention being given to the worker and the practical needs of industry.

Government. The Union of Socialistic Soviet Republics is, as its name implies, a union of individual states. Supreme governmental authority is vested in the Congress of Soviets, composed of representatives of town and provincial Soviets. The Congress of Soviets elects a Central Executive Committee of two bodies: the Council of the Union of 414 representatives of the united republics apportioned in proportion to population, and the Council of Nationalities of 100, composed of five delegates from each republic and one from each autonomous region. This Committee is the actual power in the Union. Legislation must be adopted by both chambers. Each Council elects its own Presidium of seven members. These, with seven other delegates elected from the Committee, form the Presidium of the Central Executive Committee and constitute the supreme authority when the Committee is not in session, with the sole right at all times of declaring war, signing treaties, receiving foreign diplomats, and supervising the carrying out of the orders of the Committee and Congress of Soviets.

The Executive Committee appoints the Council of People's Commissaries, including a president and deputy presidents, and Commissaries for foreign affairs, war and marine, foreign trade, and all the various departments of state. The Commissaries directly conduct the administration of governmental departments, in which they roughly resemble a cabinet, and have limited legislative powers. The Commissaries and the Presidium of the Central Committee are both responsible to the Central Committee, which in turn is responsible to the Congress of Soviets. A Supreme Court decides questions between states or the Union and a State.

The government of each republic is in general the same as that of the Union. The Union conducts all foreign negotiations, establishes internal systems of trade and economy, directs the armed forces, and outlines the development and use of land and natural resources. To the republics belong all powers not granted the Union by the constitution.

Industry and Resources. Unsettled conditions and the lack of reliable statistics from the Soviet Union prohibit detailed accounts of industries in 1927. *Agriculture* is the leading industry, grains, chiefly wheat, rye, and oats, and potatoes and flax are the chief crops. Grains are now a government monopoly. The territory is normally depended upon for two-thirds of Europe's wheat. Cotton, sugar beets, hempseed, sunflower seed, and tobacco are also grown extensively and live stock are bred in nearly all parts of the country, especially in Europe. *Forests* are extensive, over a billion acres being estimated as exploitable, and 250 billion board feet felled annually. *Mining:* Coal, manganese, iron, copper, asbestos, zinc, lead, gems, and gold are mined. Ordinarily the region supplies the greater part of the world's platinum and considerable petroleum. *Manufacturing* is under State control, all industries and capital having been confiscated and organized in syndicates and trusts. Enterprises are leased to individuals or corporations. Iron and steel, textiles, flour, sugar, and refined petroleum are some of the important products.

FINLAND

Area is 149,954 square miles; population, 3,558,059 of, whom one-eighth are Swedes. Lutheran **religion** predominates. **Education** is very well developed, less than one per cent of children of school age being without instruction. There are 3 universities. The **government** chief executive is the President, elected for 6 years by universal suffrage, and assisted by a Cabinet. The legislative branch is a House of Representatives of 200 members elected for 3 years. In **physical features,** Finland presents a series of low hills and parallel valleys descending to the Gulf of Bothnia, the surface being highly glaciated. Toward the south, it is dotted with innumerable lakes, which have been developed into a fine system of connected inland waterways. The **climate** is healthful, but rigorous, with wide range of temperature. Rainfall is adequate for vegetation, being heaviest in south and decreasing toward east. **Forests** of pine and spruce are the chief natural wealth, covering over half the total area. **Agriculture** and **lumbering** are the main occupations. The principal crops are rye, barley, oats, hay, potatoes, flax, and hemp. Live stock are reared in considerable numbers. Iron is the chief **mineral.** Finnish sovereignty over Aland Islands confirmed 1921.

ASIA

Area. Asia has an area of 16,985,760 square miles. It is the largest of the continents (twice the size of North America), and comprises nearly one-third of the land surface of the world.

Coast-Line. The coast-line of Asia is of tremendous extent. Except for the Ural and Caucasus ranges, Caspian Sea, and narrow Isthmus of Suez, Asia is entirely bounded by the Arctic, Pacific, Indian, and Atlantic oceans or their tributaries.

The Arctic coast is in general low and flat, with the western portion penetrated by estuaries, and the eastern portion built out by river deltas. The eastern coast of Asia, with its fringe of islands, is steep and irregular except where great rivers have deposited their extensive deltas. On the south is a narrow coastal plain from which rise the terraced slopes of the Indian and Arabian peninsulas. On the west, Asia Minor sinks abruptly to the Mediterranean and Black Seas.

Climate. The great extent of latitude of the continent gives it a range in temperature from the most extreme cold in the Arctic regions to the most excessive heat in the tropics. The varying elevations also cause a wide range of temperature. The Himalayas rise far above the snow-line, and at their base is the vegetation of the tropics.

In northeastern Siberia, more than 90° below zero has been recorded. The average January temperature there is about 56° below zero.

In Tibet, with a mean elevation of 15,000 feet, the cold in winter and at night is intense; little rain falls; and vegetation is scanty, a large part of the population living by keeping meager herds of sheep.

The southern peninsulas have the greatest rainfall in the world. In India, Japan, and the Eastern Archipelago, rain is abundant. In the southwest and in the interior are great desert areas.

Population. About two-thirds of the inhabitants of Asia are yellow-skinned Mongolians. The Mongolians are commonly classed as northern and southern, based chiefly on differences in language. The white race, chiefly in western Asia, is represented by many types. Remnants of the Australoid type are found in several places in southern Asia. Negroid races, at home in Africa, have been located far to the east, in the Philippines and New Guinea.

About 1,046,762,427 people, over half the world's total, live in Asia.

Topography. The structure of Asia is more complicated than that of any other continent. In general, four great divisions may be recognized: the northern lowlands, the central mountains, the southern tablelands, and the eastern volcanic mountains.

The northern lowlands include most of Russian Turkestan and West Siberia and the northern and western portions of East Siberia. Much of the country is semi-arid, and in some places, such as the Kizil Kum region, actual desert. In the Siberian Plain are vast tracts of arable land, innumerable marshes and bays, low chains of wooded hills, and, in the north, dreary wastes of frozen tundra. In general, this region is sparsely inhabited, but lacks only development to become of great economic importance.

The central mountains occupy by far the greater part of the continent. This region extends from Asia Minor to the Pacific, and reaches with two arms to Bering Strait. The nucleus of this mountain region is the small Pamir Plateau, known to the natives as "the roof of the world." To the north, the mountains fall to the great basins of Mongolia and Chinese Turkestan, the "dead heart of Asia," vast sandy deserts lying at low elevations, in places probably even below sea level. Immediately to the south is a great plateau region extending across the continent. Tibet, with an altitude of about 15,000 feet, is by far the most elevated country of its size in the world. The Taurus Mountains of Asia Minor, the mountains of southern Persia, the Sulaiman range of Western India, the mighty Himalayas, and the parallel ranges of Indo-China shut off this plateau region from the southern tablelands. In the Himalayas is the world's highest peak, Mount Everest (29,002 feet).

The southern tablelands are the peninsulas of Arabia and India. Geologically, they are related to the great African plateau. In both peninsulas, there is a great deal of lowland, the country seldom rising as high as 6,000 feet.

Between these tablelands and the mountains are the broad, low basins of the Ganges and Indus rivers and the basin of Mesopotamia.

The eastern volcanic mountains form a long island-chain bordering the Pacific Ocean from the Sunda Islands northward through the Molucca, Philippine, and Ryukyu islands, thence through Japan and the Kuriles to the mainland peninsula of Kamchatka. Active volcanoes are numerous, and earthquakes frequent.

Industries and Resources. *Agriculture:* Vast areas in Asia have long remained unproductive. Better transportation facilities, however, are now bringing about more extended development. India and China are the most naturally productive regions, and here are located nearly five-sixths of the vast population of Asia.

The important agricultural products are the cereals, sub-tropical products such as coffee, cotton, sugar-cane, opium, tea, indigo, jute, oil seeds, spices, and fruits, principally dates, oranges, and grapes. Tobacco is also extensively grown, particularly in Asia Minor.

One of the most important products, produced chiefly in China and Japan, is raw silk.

Animal products of Asia are wool, furs, hides, ivory, and dairy and meat products. Siberia leads in animal products.

Forests are exceedingly rich in valuable timbers, gums, and rubber.

Minerals. The resources of the continent are but slightly developed. Gold, silver, tin, copper, precious stones (principally rubies), coal, petroleum, and sulphur are produced most extensively. The Malay tin mines are unrivaled. In China are vast coal resources which are largely unexploited.

ARABIA

The Arabian Peninsula is an undulating plain, sloping gently from sea-level in the east to over 2,000 feet in the west. Here, in Yemen and Hejaz, many summits exceed 8,000 feet, and the descent to the sea is short and steep. Along the Gulf of Oman hard rock rises, equalling in height the western altitudes, and across the center of the peninsula, in Nejd, masses stand up over 5,000 feet.

The peninsula of Arabia was formerly wholly under Turkish rule. The ejection of the Turks in 1914, and the Great War, enabled Arabian nationalism to assert itself in several places. Internecine warfare resulted which was not ended until 1926. The area of the peninsula is estimated at 1,000,000 square miles; its population at 7,000,000. The following states existed in Arabia in 1925.

Nejd is an independent Sultanate in central Arabia, including the Persian Gulf coast district of El Hasa and the former Kingdom of Hejaz and Emirate of Asir which were annexed in 1925–1926. Its boundaries are too indefinite to permit an estimate of its area. Its population is about 3,000,000. It produces dates, wheat, barley, fruit, hides, wool, honey, clarified butter, abas, camels, horses, donkeys, and sheep. Hejaz contains the Holy Places of Islam—Mecca, the birthplace of Mahomet (pop. 70,000), and Medina, his burial place (pop. 30,000). The capital of Nejd is Riyadh (pop. 20,000), and the chief seaports are Jidda (25,000) and Yenbo (3,000).

Asir, an Emirate (area 13,857 sq. mi.) is now practically a part of Nejd. Pop. 750,000. Capital, Jizan.

Yemen is an Imamate of some 75,000 square miles with a population of about 2,500,000. Its capital and chief city is Sana (pop. 20,000).

Aden Protectorate, including Aden, has an area of about 9,000 square miles with a population of 100,000. Its chief industries are the manufacture of salt and cigarettes. Capital, Aden, (pop. 20,000).

Hadramut, on the southeast coast, had no king in 1929, the area being under loose British control.

Oman is a Sultanate in southwest Arabia. It has an area of 82,000 square miles, and a population (chiefly Arabs) of about 500,000. Maskat is the capital and the only port of call with a population of 10,000.

Kuweit is a Sultanate on the Persian Gulf, whose Sultan is subsidized by Great Britain. Its population is estimated at 50,000.

Bahrein Islands, off the coast of El Haza, are ruled by an Emir, under the protectorate of Great Britain. They comprise five islands, with population estimated at 120,000. Pearls, sail cloth, and reed mats are produced.

TURKEY

Following the defeat of the Central Empires in the World War, the Turkish Empire was redistributed. The total area was reduced from 710,224 to 294,415 square miles, and the population, from 21,273,900 to 13,660,275. For details see "Recent Changes in World Maps," at front of volume. Only a small remnant is still retained under nominal Turkish sovereignty on European soil—at and around Istambul (Constantinople). Turkey lost all her fortunes in Europe and Asia; the Dardanelles and Bosporus defenses were demolished; and Great Britain, France, and Italy were given the right to maintain naval, military, and air forces in the Straits.

Government. The Republic of Turkey is governed by the Grand National Assembly, in which is vested all legislative and executive power, and which is elected every four years by the people. Each assembly exercises its executive power through a President, elected by itself, to act throughout its life. He is President of the Republic, ipso facto President of the Assembly, nominates the Council of Ministers, and is responsible, with the cabinet, to the Assembly. Capital, Angora (population 74,784).

Local Government. The country is divided into Vilayets, Cazas, and Nahies. A representative of the Grand National assembly, a Vali, is at the head of each Vilayet. The Nahie is autonomous, governed by an elected council whose administration extends to all matters not reserved to the State.

Religion. The prevailing religion in Turkey is Mohammedanism, but the Roman Catholic, Greek, Armenian, Syrian, Maronite, Nestorian, Protestant, and Jewish faiths are officially tolerated. Although Mohammedanism is recognized as the State Religion, its position and influence is rather fluid under the present administration.

Education. Education is encouraged by the Koran, and there are public schools in most towns throughout the Republic. It is compulsory between the ages of 7 and 16. Secular instruction was abolished in 1924. Many foreign missionary schools (French, English, American, etc.) are maintained. An Imperial University was established in Istambul (Constantinople), 1900, its medical faculty being installed in a fine modern building in Skutari (Scutari), on the opposite shore of the Bosporus. In 1926 the Latin Alphabet was officially introduced for use in Turkish documents.

Defense. During the World War, Turkey recruited about 2,700,000 men, the greatest force in the field at any time being about 650,000. Total losses from all causes, over 2,000,000.

The Turkish army musters about 120,000 men and officers,and is formed by conscription. The navy, now being reorganized, will include three battleships, two light cruisers, eight gunboats, and destroyers and torpedo boats. The craft were all built prior to 1912.

TURKEY IN EUROPE comprises the Vilayet, or province, of Constantinople (including the Derkos water-supply district), and the adjoining Sanjak, or minor province, of Chatalja. **Area,** 9,254 square miles. **Climate** is mild and equable. Rainfall is light.

Population. The population is 1,044,306, chiefly Moslems, but also including many Greeks, Bulgarians, Armenians, Gypsies, and Jews.

Industries and Resources. The Turkish fisheries have an annual output of about $10,000,000. In Istambul (Constantinople) are two of the five principal cotton-spinning mills of the Empire. Rugs are woven on hand looms; brass and copper utensils are made; paper, glass, soap, etc., manufactured. Imports, which are nearly double exports in value, are chiefly textiles; also coal, petroleum, sugar, flour, iron goods, machinery, etc. Exports, chiefly dried fruits, wool, silk and cocoons, tobacco, olive oil, mohair, and opium.

Istambul (Constantinople) (population, 699,869–1,003,486 including suburbs), occupies the triangular site of the ancient Greek colony of Byzantium, founded 656 B.C., at the southern end of the Bosporus. On the south, the city faces the sea of Marmora; the eastern side of the city is on the magnificent harbor of the Golden Horn, an arm of the Bosporus.

TURKEY IN ASIA. Area and Population. The area of Asiatic Turkey before the World War was about 700,000 square miles. Since then it has been reduced to 285,161. The population was 12,615,969 in 1927. Before the war it was 19,382,900. Arabs predominate, but Turks are very numerous in western and northeastern Asia Minor; Kurds, on the Persian Frontier; Armenians, in eastern Asia Minor; Greeks and Jews, in the western Coast Towns.

Physical Features. Dominant features are the elevated plateau of Asia Minor, extending eastward into highlands of Kurdistan and Armenia, culminating in the snow-capped, craterless, volcanic Mount Ararat (16,925 feet), and the western highlands of Arabia. The north coast of Asia Minor is skirted by the Pontine Mountains; the south, by the Taurus ranges swinging up to northeast. West coast region is broken by broad valleys. Great central plains of interior plateau, west and east of Taurus ranges, are diversified by volcanic uplifts, and contain large salt lakes. **Climate.** Except in coastal regions of west and south, Asia Minor has a trying climate —damp and enervating on north coast—with hot, dry summers and long, cold winters, ranging to extremes in interior.

Industries and Resources. *Agriculture:* The coastal regions of Asia Minor are the most productive sections. Not only are they the most accessible for commerce, but they are favored with rainfall sufficient for agriculture, whereas much of the interior is semi-arid or desert. Even here, however, the soil in many parts responds well to irrigation. Farming methods, on the whole, are most primitive. The leading crops are tobacco, cereals of all kinds, cotton, figs, olives, grapes, and other fruits, filberts and other nuts. Coffee, madder, opium, gums, and attar of roses also produced. Coffee is grown chiefly in southwestern Arabia; opium in Konia; tobacco along Black Sea coast. Silkworms are extensively raised in Brusa, and the mulberry tree is cultivated for their sustenance. Large areas are suitable for grazing, and horses, cattle, sheep, and Angora goats are reared in large numbers. The camel is the ordinary beast of burden, being especially adapted to desert conditions.

Forests. Prior to the World War, the forests of Asiatic Turkey still covered nearly 17,500,000 acres, although the one-time rich timber areas had been much reduced in the absence of restrictive regulation as to cutting. The principal forest areas, totaling over 10,500,000 acres, are now in the Izmir (Smyrna) territory and the vilayets along the Black Sea coast, where the mountain slopes are thickly covered with oak, ash, beech, pine, fir, larch, cedar, and other timber trees. *Fishing* is extensively carried on, the principal products being sponges from the Mediterranean, and mother-of-pearl and pearls from the Red and Arabian Seas. *Minerals* are abundant, but practically untouched. They include coal, iron, salt, gold, chrome, silver, lead, zinc, manganese, antimony, arsenic, copper, borax, meerschaum, kaolin, emery, mercury, lithographic stone. *Manufactures* are chiefly domestic—leather, saddlery, swords, firearms, coarse linen, woolen and cotton goods, carpets, wine, silver and gold thread, lace, brass-turned and beaten-copper ware. Wine, olive oil, coffee, silk cocoons, barley, opium, madder, valonia, etc., are prepared for export. There are modern flour and cotton mills in Izmir and Adana.

CYPRUS

This former Turkish island in the Mediterranean, 40 miles from the coast of Asia Minor and 60 from the coast of Syria, passed under British administration in 1878. It remained under Turkish suzerainty, however, until Turkey joined the Central Empires in the World War, 1914, whereupon Cyprus was formally annexed to the British Empire. It is administered through a Governor, an Executive Council consisting of the Colonial Secretary, the Attorney-General, the Treasurer, and three local residents, and a partly elective Legislature. **Area,** 3,584 square miles, with an estimated **population** in 1925 of 330,000, mostly adherents of the Greek Orthodox faith. Elementary education is designed so that each race has its own schools, of which there are about 900, including secondary ones. There are valuable sponge fisheries off the coast. Gypsum, marble, and terra umbra are found in abundance; cupriferous iron pyrites is mined on a large scale. Asbestos is also mined. Surface is rugged and mountainous; climate healthful; soil fertile. The chief products are corn, vetches, cotton, flaxseed, olives, raisins, and other fruits, silks, wines. A narrow gage railway runs between Famagusta and Evrykhou (76 miles). The capital is Nicosia which has a population of 18,461.

IRAQ (MESOPOTAMIA)

Iraq, embracing the fertile valleys of the Tigris and Euphrates Rivers, is composed of three former Turkish Vilayets—Basra, Mosul, and Baghdad, and was recognized as an independent state in 1918. Its position is of great strategic importance as it controls the eastern terminus of the Baghdad Railway at the head of the Persian Gulf. On the west it is bounded by Transjordan and Syria, on the north and east by Turkey and Persia respectively; while in the south Nejd, Kuweit, and a Neutral Zone form the limits.

Area and Population. Iraq has an area of 143,250 square miles with a population of 2,849,282, in 1920. About 95 percent of the inhabitants are Mohammedans.

Resources and Industries. The country consists of vast plains, fertile and well watered in most sections, but in others requiring irrigation by means of canals and pumps. The summers are hot and the winters are very agreeable. Cotton cultivation is greatly encouraged by the government. Other crops are barley, wheat, and dates. A considerable amount of wool is exported annually. The rich petroleum and asphalt deposits, for which Iraq (Mesopotamia) is famous, are also being worked.

Government. When its independence was proclaimed, shortly after the World War, Iraq was placed under Mandate of Great Britain by the League of Nations. The Mandatory terms were defined by a treaty between England and Iraq in 1922 and accepted by the League in 1924. The administrative power rests with the King and his Cabinet who are guided by the British High Commissioner's advice. The legislative body consists of a nominated Senate and an elected Lower House. The capital is Baghdad, population 250,000.

PALESTINE

Palestine, comprising that part of the "Holy Land" west of the Jordan Valley to the Mediterranean Sea, was turned over to Great Britain under Mandate by the League of Nations, with the object of establishing therein a National Home for Jews. The Mandate became effective September, 1923, and included Transjordan with the stipulation that the latter should be excluded from the Jewish settlement clause. On the north, Palestine is bounded by Syria, while in the south Hejaz and Egypt form the limit.

Area and Population. The area of Palestine, under the terms of the Mandate, is about 9,000 square miles. The coastal country, devoid of many good harbors, is 15 to 20 miles wide and rises to a rough plateau which, farther east, drops steeply into the Jordan Valley and Dead Sea depression. The climate is hot during the summer, but winters are mild as in Southern Italy. Rainfall is light in the interior.

The population is 852,268, of which about 80 per cent are Moslems. The Jewish Settlements are grouped in four districts, Judea, Samaria, Lower Galilee and Upper Galilee. They are 114 in number with about 30,000 inhabitants.

Education. The government maintains over 300 schools that care for about 20,000 children, the bulk of whom are Moslems. The Zionist Organization controls 255 educational institutions including several secondary schools and colleges. Christian schools number about 184. There are three official languages in Palestine,—English, Hebrew, and Arabic.

Resources and Industries. The majority of the inhabitants of Palestine are engaged in agriculture. Chief crops are wheat, barley, durra, lentils, olives, citrus fruits, and tobacco. Considerable live-stock is raised, principally sheep, goats, and camels. Manufactures of export importance are olive-oil, soap, and wine. There are many small factories and industries, including soap, brick, tile, and tobacco factories, oil, and flour mills, and distilleries. Rock salt, sulphur, carnalite, cooking salt, and bromide are the only minerals of economic value.

Government. The British High Commissioner and an Executive Council are responsible for the execution of the laws. Legislative power is vested in a partly elected Legislative Council. The Zionist Organization is represented by National Committee.

Capital is Jerusalem, population 62,678.

SYRIA

(Republics of Alaouites, Djebel Druze, Lebanon, and Syria)

This territory, consisting of five former partially autonomous states, was detached from Turkey after the World War, its independence recognized, and given to France for administration under Mandate by the League of Nations. The Mandate became effective in 1923. It is bounded by Palestine on the south, by Iraq on the east, by Turkey on the north, and by the Mediterranean Sea on the west. For administrative purposes it is divided into the following four states:—Syria, Lebanon, Alaouites, and Djebel Druze.

Area and Population. Syria consists of the area traversed by the mountain chains of the biblical Lebanon, together with the greater part of the valley of the Euphrates lying between the 34th and 37th parallels. The majority of the population is of Arabic origin and that language, with many dialectical variations, is spoken by most of the inhabitants. Since 1920 there has been a large influx of foreigners among which are Jews, Persians, Turks, Kurds, and Armenians.

	Area sq. m.	Population 1924	Capital
Alaouites	2,510	261,162	Lattaquié
Djebel Druze	2,317	60,000	Soueida
Lebanon	3,599	598,062	Beyrouth
Syria	49,035	1,503,500	Damas
Total	57,460	2,422,724	

Education and Religion. Education is abundantly provided for, there being about 575 public elementary schools with 40,000 pupils, a number of secondary schools, a normal school, many private schools, and two universities at Beyrouth—one American and one French. Over fifty per cent of the population adhere to the teachings of Mohammed.

Resources and Industries. Syria is an agricultural country, with over 10 per cent of the land, much of which is valueless, under cultivation. Wheat is the chief cereal crop with barley, durra, corn, oats, and rye following in the order named. Vegetables and fruits are raised in profusion, and tobacco, hemp, and cotton are also produced. Considerable quantities of lentils, vetches, chickpeas, and beans are also cultivated. The citrus fruit industry has increased in recent years. Cattle-breeding and sheep-raising are also important.

Although there are indications of mineral wealth, very little development has been done. Some iron is mined in northern Lebanon. Indications of petroleum have been found, but no successful wells have been drilled. Phosphates, copper, nickel, lead, antimony, and chrome also exist.

Government. Each of the states have a form of republican government, modified to meet their individual requirements. The acts of the presidents or governors, and their respective law-making and executive bodies, are subject to the sanction of the French High Commissioner who is the supreme governor under the terms of the Mandate.

The chief capital, where the French Commissioner resides, is Beyrouth (Beirut), population 120,240.

TRANSJORDAN

Transjordan comprises that part of old Palestine east of the Jordan River and the Dead Sea. It was included in the Mandate for Palestine, but is not open to Jews for the establishment of a national home. On the south and east it is bounded by Nejd and Iraq, and on the north, Syria.

Area and Population. As the boundaries have not yet been formally established, an estimate of the area cannot be given. The population, consisting mostly of Arabs, numbers about 240,000, 95 per cent of whom are of the Moslem faith.

Resources and Industries. Except for a strip along the Jordan River and the Dead Sea, the region is largely desert. Agricultural and pastoral products, phosphate and potash, are the only resources, with the possibility of oil in the south.

Government. Transjordan is governed by local Arab Administration under an Amir who is assisted by an Executive Council. The British High Commissioner under the Palestine Mandate is responsible for the territory.

The capital is Amman, population 5,000.

PERSIA

Area. The area of Persia is 628,000 square miles.

Climate. The climate varies considerably according to locality. In the thickly wooded Caspian region of the north, where rains are frequent and the humidity is very great, the summers are hot; on the high tablelands, the range between extremes in temperature becomes wide. The dry and barren maritime tracts of the south are very hot in summer, but the winters are agreeable.

Population. Inhabitants number about 10,000,000. About one-fourth of the people are nomads, of whom Turks, Kurds, and Leks are the principal races, but there are also many nomad Arabs and Lurs. Another one-fourth of the population are settled in the cities, and the rest are engaged in agriculture.

Religion. There are about 8,500,000 Shî'ah Mohammedans and 850,000 Sunnî Mohammedans. Approximately 50,000 Armenians live in the northwest, and besides these there are about 40,000 Jews, 30,000 Nestorian Christians, and 10,000 Parsees.

Government. Persia is nominally a constitutional monarchy under a hereditary Shah, with legislative power vested in a National Council (Majlis). The Council, however, was never properly constituted until 1925 when the Shah, Sultan Ahmad, was overthrown by Riza Khan who was then elected Shah by the Constituent Assembly. The first "Majlis" since 1906 was opened by the new ruler on December 30, 1926. Actual administration of the country is in the hands of a Cabinet.

Persia's geographical position—that of a buffer state between rival interests, British, Russian, and (formerly) German—has made it a battleground of diplomatic controversy and intrigue. British influence, guaranteeing the independence and integrity of Persia, has generally dominated.

Education. Schools on European lines are being introduced, and a recently created Educational Council has done much reform work. Most of the native colleges (*medresseh*) are concerned principally with the study of the Koran and of Persian and Arabic literature.

Industries and Resources. *Agriculture* is limited chiefly to the higher slopes of the plateau and the well-watered mountain valleys.

Wheat, barley, rice, and cotton are the chief products. Fruit, hemp, tobacco, gums, opium poppy, oil, and dye plants are also grown and exported. Sheep-raising is important.

Forests. Valuable forests grow on the Caspian slopes and in the western mountain provinces.

Minerals. Pearl fisheries of Persian Gulf richest in world. Turquoise mines of Khorasan yield rich royalties. Petroleum fields near Caspian Sea produced 6,200,000 barrels in 1920. Coal worked on Elbruz slopes; lead in Khalkhal region. Gold, copper, silver, tin, sulphur, mercury, cobalt, iron, manganese, and nickel occur. Salt and borax also produced.

Manufactures. The weaving of rugs and carpets is by far the most important industry. Tabriz, Hamadan, Sultanabad, Kerman, and Kermanshahan are the great centers of manufacture. Shawls are made in Kerman and Mash-Had (Meshed), and silks in Khorasan, Kashan, and Yezd. Cotton goods are also important. The manufacture of rosewater is an important industry in Kashan and Fars.

Defense. *Army:* The Persian army, 1924, comprising 40,000, consisted of five divisions, with headquarters at Tehran, Tabriz, Hamaden, Isfahan, and Mash-Had (Meshed).

Navy: The navy of Persia consists of three vessels in the service of the Customs Department.

AFGHANISTAN

Area. The total area is 245,000 square miles.

Climate. The climate of Afghanistan is most unpleasantly variable and severe. The summers are intensely hot and dry, and sandstorms are frequent in the southwest. Winters are very cold, and many snowstorms occur.

Population. The population is about 12,000,000.

Afghanistan is peopled by many races, to only one of which the name Afghan is properly applied. This people is the tribe of the Durrani, a race which claims descent from the captive tribes of Israel. Most numerous is the tribe of the Ghilzáis, supposedly of Turkish descent. Other races are the Hazáras, Aimáks, Tájiks, and Uzbeks.

Religion. Afghanistan is one of the most fanatical Mohammedan countries in the world. Sunnî Mohammedanism prevails.

Government. Since 1922 Afghanistan has been a constitutional monarchy. There are a Legislature and State Assemblies, and a Cabinet over which the Amir presides. The country is divided into nine provinces, each under a governor. The major provinces are Kábul, Kanadahár, Herat, Mazar-i-Sharif, and Kataghan-Badakhshan; the minor provinces are Jalalabad, Khost, Farah, and Maimena.

Education. Elementary education is free and compulsory, and higher education is free. There are a military and an arts college and schools for civil servants.

Industries and Resources. *Agriculture* is largely dependent on irrigation. Two crops a year harvested in most parts, one sown in autumn, consisting chiefly of rice, millet, maize; and the other in spring, consisting of rice, millet, corn, arzna, and tobacco. Fruits are grown in abundance, and form the principal food for many of the people. Vegetable dyes, such as madder and saffron, are grown. The castor oil plant, assafetida, spices, and plants yielding gums (tragacanth, etc.) abound.

Stock-raising is an important industry. Horses, camels, goats, and fat-tailed sheep are numerous throughout the country.

Minerals. Iron, lead, antimony, sulphur, and gold are produced. Copper and gems (lapis lazuli) are found.

Manufactures. The manufactured products are principally for local consumption, though large quantities of wool, sheepskins, silks, rugs, carpets, preserved fruits, rosaries, felts, sheepskin coats, and camels' hair goods are exported.

Defense: *Army:* A small standing army is reinforced by rugged nature of country, lack of roads, and the capacity of Afghans for guerrilla warfare.

BALUCHISTAN

Area. The area totals 134,638 square miles.

Climate. Baluchistan is subject to great variations in temperature, especially in the mountains. In summer it is the hottest country of the continent, though the winters are comparatively cold.

Population. Inhabitants numbered, in 1921, 799,625, comprising many tribes, the most numerous races of which are the Bráhui, Pathan, and Baluchi.

Religion. Over nine-tenths of the people are Mohammedans, chiefly of the Sunnî sect. There are about 51,350 Hindus and 6,693 Christians.

Government. Since 1876, Britsh control has gradually been extended. The country is divided into three main divisions: British Baluchistan proper, British Agency Territories, and the Native States of Kalát and Las Bela. Capital, Quetta (49,901).

The British and administered territories are under an Agent to the Governor-General. The area of the territories is 54,228 square miles; population 420,648.

The Native States of Kalát and Las Bela are each governed by a Chief, who is amenable to the advice of the Agent to the Governor-General. Kalát has an area of 73,278 square miles, and a population of 328,281; while Las Bela comprises an area of 7,132 square miles, with a population of 50,696.

Education is being improved under British administration.

Industries and Resources. *Agriculture.* Owing to the mountainous and largely arid nature of the country, agriculture is confined to valleys. Grains, fruits, and potatoes are grown where climate and soil permit. Sheep, goat, horse, camel, buffalo, and cattle grazing is extensive.

Minerals. Mineral resources are undeveloped. Coal and salt mines are worked, and iron, lead, copper, asbestos, chromite, and petroleum are found.

Manufactures are unimportant. Felts, blankets, rugs, leatherwork, needlework, and pottery are the principal products.

Defense. *Army:* Regular British troops are stationed at Quetta and other places, to maintain law and order. The chiefs of Kalát and Las Bela have their own small military forces.

INDIA

Area. The total area of India, including 711,032 square miles embraced in the Indian states and agencies, is 1,802,629 square miles.

Climate. The range of temperature is rather wide. In the plains the heat is very great throughout the year; on the coasts the temperature is high, but equable. On the plateaus the heat is tempered by the altitude. The monsoons (periodical winds) exercise a very marked effect upon the country, bringing on the wet season in summer, and the dry season during the late fall and winter.

Population. The total population, 1921, was 318,942,480, of whom about 22 per cent lived in the Feudatory States. Of the 147 different languages, the most important are Hindi, Bengali, Telugu, Marathi, Tamil, Punjabi, Rajasthani, and Kánarese. There are about 115,600 British-born in India.

Religion. About 70 per cent of the total population of India are Hindus. Other important religious bodies are the Mohammedans, Buddhists, Animists, Parsees, Jews, Christians, Sikhs, and Jains.

Government. The supreme executive authority is vested in the Viceroy (or Governor-General)-in-Council. The legislature, comprising the Council of State and Legislative Assembly, both partly elective, has a limited authority. The Feudatory States are governed by their own princes, ministers, or councils, and, except for restrictions safeguarding authority of the Supreme Government, are autonomous. Capital of India since 1912, Delhi (304,420).

Education. Notwithstanding the recent progress in education, only about seven per cent of the population can read or write.

Industries and Resources. *Agriculture* has always been the chief industry of India. Rice is cultivated to a far greater extent than any other crop. Wheat forms the chief export to Great Britain. Millet and pulse comprise the principal food crops. Large crops of cotton, linseed, rape, and mustard, sesame, groundnut, and sugarcane are produced. Jute, indigo, tea, and tobacco are also grown. Stock-raising is important, and hides and skins are exported.

Forests. The forests of British India occupy 249,504 square miles.

Minerals. The leading minerals are coal, petroleum, gold, manganese ore, salt, saltpeter, tin, and jadestone.

Manufactures. Cotton and jute weaving are the largest manufacturing industries. Wool, silk, shawls, carpets, wood-carving, metal-working, sugar, lumber, paper, are also of importance.

Defense. *Army.* British garrison troops, 62,179. Imperial service troops are maintained by the native states. At end of 1926, the native army numbered 192,682. Over 1,215,330 Indian troops served with the allied Armies during the Great War; casualties, about 115,000.

Dependencies. The *Andaman Islands* comprise an area of 2,508 square miles; population, 1925, 26,833. The forests are valuable; tea, cocoanuts, manila hemp, aloe, and cattle are raised.

The *Nicobar Islands* have an area of 635 square miles; population, about 9,272, a variety of the Malay race. The people have pursued the cocoanut trade for over 1,500 years.

The *Laccadive Islands* have a population of 10,000 almost entirely Mohammedans. The staple product is coir fiber. Area 744 square miles.

NEPAL

The independent Kingdom of Nepal is governed nominally by the Maharaja, but is actually a military oligarchy under the Prime Minister. The country comprises an area of 54,000 square miles; population, about 5,600,000, chiefly Gurkhas. Hinduism and Buddhism dominate. Rice chief product and food. Other products, ginger, sugar, tobacco, potatoes, fruits, cattle, hides, gums, oil seeds, jute, timber, saltpeter, etc.

BHUTAN

The State of Bhutan is governed by a hereditary Maharaja; but control of foreign relations was surrendered to Great Britain in 1910. The area is 20,000 square miles; population 250,000, almost all Buddhists. Cereals, wax, lac, musk, and silk chief products. Ponies are raised. The forests are valuable. Cloth and silks, leather, gums, and swords, are the chief manufactures.

CEYLON

Area. The area of Ceylon is 25,332 square miles. The **climate,** although tropical, is remarkably uniform, as heat is tempered by the surrounding sea and the monsoons. The hill country is healthful; mean annual temperature at Kandy (1,665 feet elevation), 76°. Rainfall averages 40 to 200 inches—heaviest on southwest hill slopes, and in May and October.

Population. The population, 1926, was 5,124,992, the Sinhalese comprising about 62 per cent. Europeans, about 7,300. **Religion:** Over one-half of the inhabitants are Buddhists. Hindus, Christians, and Mohammedans rank next in number. **Government:** Ceylon is a British Crown Colony under the administration of a Governor, an Executive Council, and a partly elective Legislative Council. **Education** is on a high plane for an Asiatic country. One out of every ten inhabitants attends school. There are regular vernacular schools, technical and industrial schools, and the Royal College.

Industries and Resources. *Agriculture* employs two-thirds of the people. Cocoanuts, rice, tea, and rubber are the chief products, but cacao, coffee, tobacco, and cinnamon are also grown in large quantities. Cotton, various fruits, and vegetables are being introduced. There are numerous cattle, sheep, goats, and pigs.

Fisheries. Pearls are the most important sea products.

Minerals. Plumbago is the chief mineral, though the island also contains gold, monazite, thorium, and mica. There are many gem quarries, where catseyes, sapphires, rubies, etc., are found.

Manufactures comprise woven materials, basket work, tortoise-shell articles, jewelry, earthenware, and metal, lacquer, and carved work.

Dependency. The *Maldive Islands* contain a population of over 70,000 Mohammedans, great navigators and traders. Ruled by an elected Sultan. Cocoanuts, millet, fruit, and nuts are the chief products.

THE STRAITS SETTLEMENTS

The **Straits Settlements,** a British Crown Colony, comprise *Singapore* (Singapore, Labuan, Christmas, and Cocos Islands), *Penang* (including Province Wellesley and the Dindings), and *Malacca.* Area, 1,600 square miles. The population, 1924, consisting chiefly of Malays, Chinese, and Indians, was 960,952. The colony is administered by a Governor, Executive Council, and Legislative Council.

Singapore (population 259,610), free port and port of call for almost all steamers between Europe and the Orient, is the world's greatest rubber market. Contains largest tin smelters. Chief exports, tin, rubber and other gums, copra, spices, tapioca, sago, rattans, gambier, hides, phosphates, and preserved pineapples.

THE MALAY STATES

The **Federated Malay States** of *Perak* (area, 7,800 square miles), *Selangor* (3,156 square miles), *Negri Sembilan* (2,550 square miles), and *Pahang* (14,000 square miles) have a population of about 1,418,455, principally Chinese and Malays in about equal numbers. About one-sixth of the people are natives of India. Cocoanuts, rice, coffee, and rubber are the chief agricultural products. The forests produce excellent timber, as well as gutta-percha, oils, and resins. These states are the world's chief source of supply of tin. Gold, tungsten, coal, lead, iron, copper, bismuth, and mercury are also found.

The **Unfederated Malay States** (area about 23,486 square miles; population 1,123,000) comprise *Johore, Kelantan, Trengganu, Kedah,* and *Perlis.* The chief products are rubber, gambier, rice, copra, pepper, and tapioca; but tea and coffee, betel and areca nuts, and live stock are also raised. Mineral products are tin, tungsten, gold, galena, and pyrites. The manufactures are silk cloth, boats, and brick. Fishing is important.

In all the Malay states, the ruling Sultan is assisted by a Council and a British Resident Adviser, under a High Commissioner who is also Governor of the Straits Settlements.

TEMPLES OLD AND SPLENDID

TEMPLE IN SHIBA PARK, TOKYO, JAPAN

Very unlike our modern churches of simple construction are the great cathedrals and mosques of Europe, and the temples and shrines of even more-distant lands. In fascinating Japan, whose quaint picturesqueness and small and gentle people give one the impression of an animated toy-land, one finds these beautiful structures on every hand, embowered in trees or alone and dominating their surroundings.

Usually bizarre in coloring and design, the Buddhist temples, first erected in accordance with simple Chinese models, are to-day marvels of rich framework, carving, and painting. Almost invariably the approach is by an imposing flight of steps, terminating in a gallery which surrounds the temple proper. In some cases irregular wings extend, cloister-like, from one or both sides of the building. Within, the shrine or altar is at the back, in the center, with others perhaps at the sides. The floor is richly lacquered or polished, and the ceiling and walls are decorated with elaborate cornices and brackets and remarkable paintings.

Tourists who exhibit an intellectual and reverent interest in the religions of Japan are received by the priests with rare courtesy. In many cases these august personages show a willingness to impart valuable information and to grant admittance to sacred places not open to the average sightseer.

The magnificence of the Buddhist temples is conspicuously absent from the Shinto shrines. These places of devotion are of the simplest character, many having thatched roofs and plainly boarded floors. The approach generally passes under one of the gateways (*torii*), familiar from much picturing, which consist of two upright trunks surmounted by a horizontal log projecting beyond them on either side.

Very different from the temples of Japan, though in many cases Buddhist in origin, are the varied temples of India. Black and crumbling or of dazzling whiteness, low and rambling or with domes and turrets, they range from a simple structure not unlike a haycock in shape to extensive buildings which present to the traveler more the appearance of the familiar "Government House" of tropical or semi-tropical lands. Some of the mountains of India are held sacred, and shrines are set up in their cavernous depths. In certain cases shrines are dotted here and there over their surface, while imposing temples are at the foot or wherever a level space will permit.

TEMPLE IN THE PUNJAB, INDIA

CHINA

Area. The area of the 18 provinces of China proper is 1,534,420 square miles. Including Sinkiang, Manchuria, Mongolia, and Tibet the area is 4,279,170 square miles.

Climate. China is a country of extremes of temperature. The north experiences very cold winters and hot summers; the central zone is temperate, and the southernmost provinces lie within the tropics. Summer is the rainy season. The central zone receives much less rain than the north or south.

Population. China's population can only be estimated. The most reliable estimate sets that of China proper at 406,556,400, and at 438,846,400 with the dependencies included. Mongols form the great majority, Manchus the minority. In 1923 there were 324,947 foreigners (9,356 Americans) in China.

Religion. Confucianism, Buddhism, and Taoism are the three acknowledged China religions. There are also about 7,500,000 Mohammedans and 2,208,800 Christians in China proper.

Government. The Chinese Republic was established in 1912. A President, elected for five years, assisted by a Cabinet, exercise administrative powers, while a parliament of two houses exercises the legislative powers. The Senate consists of 264 members elected for six years, one-third of whom are elected every two years, and the House of Representatives is made up of 596 members elected for three years. Local government is in the hands of the provinces, which enact laws pertaining to education, police affairs, provincial debts, public works, through single-chambered assemblies, elected by the citizens. Internal disorders have prevented government from functioning with complete success. Nanking, with a population of over 395,900, is the capital.

Education. Occidental education methods have been adopted in China. Education is fostered by both the central and provincial governments. There are over 10,000 lower and 165,000 higher primary schools, as well as normal schools, industrial schools, and ten state and several private universities. Many students study in foreign countries.

Industries and Resources. *Agriculture* supports the bulk of the population. Holdings are small, implements are primitive, and irrigation is widespread. Rice is the principal crop. Wheat, barley, millet, maize, peas, and beans are cultivated in the north, and sugar, indigo, rice, and tea in the south. Tobacco and cotton are widely grown, and fruit trees grow in great variety. China furnishes about 27 per cent of the world's supply of raw silk. Oxen, sheep, and pigs are the principal farm animals, but the cost of land prevents extensive raising of live stock.

Minerals. China is one of the leading coal countries of the world. Iron has been worked since ancient times and copper is plentiful. Tin is the most important mineral export, and gold, silver, antimony, lead, tungsten, quicksilver, and bismuth are also found.

Manufactures. Most industries have not passed beyond the domestic stage but the growth of cotton and wool spinning and weaving has been rapid. Silk goods are manufactured in quantities. Flour and rice milling is important. There are several iron works, 400 glass factories and porcelain and lacquered ware, in which the Chinese excel, are ancient industries.

Defense. *Army.* The Chinese army includes about 1,300,000 men, but they are loyal to independent or semi-independent commanders, and are under no central control. *Navy.* The navy consists of 6 cruisers, 17 gunboats, 8 torpedo boats, and 3 destroyers.

Dependencies. *Manchuria* has an area of 363,610 square miles, and a population of about 27,490,000. The original Manchu population has largely been replaced by Chinese immigrants. Northern Manchuria is devoted chiefly to cattle-grazing, but the south is very fertile, and much millet, soya beans, wheat, rice, and other crops are grown. The territory comprises three provinces, each ruled by a governor appointed by China. Kwantung Peninsula and Port Arthur are leased to Japan.

Mongolia. This vast region has an area of about 1,367,600 square miles and a population estimated at 1,800,000, mostly nomadic Mongols and Kalmucks who range the desert with camels, horses, and sheep. Chinese immigration has increased considerably in late years. Inner Mongolia is divided into three administrative areas, each under a governor appointed by the Chinese government. Outer Mongolia is under the Mongolian National government, influenced by China and the Soviet Union.

Tibet is a bleak, mountainous country, and was long isolated. Its area is 463,200 square miles, and estimated population, 3,000,000. Chinese suzerainty is recognized, but Chinese influence is dominant.

Sinkiang, or the *New Dominion*, has an estimated area of 550,340 square miles, and population of 2,519,600. It is regarded as a separate province, under a civil governor. Some agriculture is practiced; wool, cotton, silk, jade, and gold are produced.

Weihaiwei. The territory of Wehaiwei, in the province of Shantung, was leased to Great Britain in 1898 for such period as Russia should hold Port Arthur. In 1926 it had not been returned to China, though Japan now leases Port Arthur. It has an area of 285 square miles, and a population of 154,416. The territory is administered by a governor. Cereals, vegetables, and fruits are grown, oak-fed silk is produced, and fishing is carried on. No British or Chinese troops are stationed in the territory, although the British China flying squadron is located here.

Kwangchow. France has leased the territory of Kwangchow on the coast of the province of Kwangtung. Its area is about 325 square miles and population 206,577. It is under the governor-general of Indo-China.

HONGKONG

The Crown Colony of Hongkong, a British commercial center, naval base, and free port, has an area of 391 square miles; population, including the mainland strip leased from China in 1898, 874,420, mainly Chinese. Administration is in the hands of a Governor, Executive Council, and Legislative Council. The chief industries are sugar refining, shipbuilding, rope making, tin refining, cement making, manufacture of tobacco, making knit goods, and deep-sea fishing.

MACAO

The Portuguese colony of Macao, situated at mouth of Canton River, has an area of about 4 square miles; population, 74,866. Opium and tea are the principal products.

SIAM

Area and Population. The total area is 200,148 square miles; population, 1926, 9,831,000. The **climate** is hot but not unhealthful. **Religion,** Buddhism. **Education** is fostered by the government. Private schools, including missionary and Buddhist schools, are in the majority. There is a university at Bangkok. **Government** is a constitutional monarchy. The King is assisted by a Cabinet and appointed legislature. Capital, Bangkok (541,000).

Industries and Resources. *Forests*, in north, of teak, ebony, rosewood, cedar, indigo; on coast, mangroves, banyan, areca, cocoanut, etc. *Agriculture:* Rice chief crop and export, staple food. Coffee, cotton, hemp, tobacco, sugar grown; fruits abundant; silk cultivated. Other products, hides, gamboge, lac, spices, dried salt fish, cattle. Most important *mineral*, tin; others tungsten, iron, manganese, coal, and gems. *Manufactures:* Silk and cotton cloths, shoes, gold and silver work, paper, pottery, mats, arrack.

FRENCH INDO-CHINA

Area and Physical Features. Total area, 274,385 square miles, comprising *Tongking* (largely a delta region), *Annam* (mountainous and heavily wooded), *Cambodia* and *Cochin-China* (mainly alluvial plains); also *Laos* and *Battambang* territories, and the leased district of *Kwangchowwan* bay and islands in the Chinese Province of Kwangtung. **Climate** governed by monsoons; wet and dry seasons. **Population,** 19,842,714, chiefly Mongols and Malays. **Religion,** Buddhism. **Government** by Governor-General, through Governor (in Cochin-China) and Residents-Superior. Capital, Hanoi (80,894.)

Industries and Resources. *Agriculture:* Rice (70 per cent of exports) the great crop; also sugar, tea, cotton, tobacco, spices, maize, coffee, manioc, fruits. *Forests*, rare hardwoods, bamboo, rubber, cocoanuts, dyewoods, and medicinal plants. *Minerals*, coal, gold, lead, antimony, tin, tungsten, zinc. *Manufactures*, chiefly preparation of rice, hides, sugar, etc., for market.

JAPAN

Area. The total area of the Empire of Japan, including Chosen, Taiwan, Karafuto, the Pescadores, and the former German Oceanic islands north of the equator allotted to Japan as mandatory of the League of Nations, is 261,832 square miles. Honshu (Nippon), the mainland, has an area of 81,254 square miles; and including Shikoku, Kyushu, and Hokkaido, Japan proper has an area of 147,289 square miles.

Climate. The climate in Japan proper is warmer than in other countries lying in the same latitude. This is caused by the warm currents of the Pacific. The yearly averages of temperature range from 44° in the island of Hokkaido (Yezo), to 71° in Taiwan. The annual rainfall for the whole country averages about 62 inches. Japan is visited, June to October, by typhoons or wind storms from the south. These are sometimes disastrous to life and property.

Population.

Year	Population	Year	Population
1910	50,984,844	1912	52,312,068
1911	51,646,273	1920	55,963,053
1925 (est.)	59,736,822		

Population of the Empire, including German islands, 1927, estimated at 85,855,697. Japanese in United States, 1920, 111,010 (entered, 9,279); in Hawaii, 109,274; in Canada, 1921, about 25,000.

Religion. There is absolute religious freedom in Japan. The principal creeds are Shintoism and Buddhism. There is no State Church, no State support to religions. The Roman Catholics, Greek Catholics, and Protestants maintain missions.

Government. Executive power is exercised by the Emperor with the advice and assistance of a Cabinet of Ministers appointed by himself. Legislative power is exercised by the Emperor with the consent of the Imperial Diet. The Diet is composed of two houses, the House of Peers and the House of Representatives. The House of Peers is composed of the male members of the Imperial family, the nobility, distinguished or educated persons nominated by the Emperor, and the highest tax-payers. The Representatives are elected by general manhood suffrage. Capital, Tokyo (2,143,200 in 1926).

For local administration, the country is divided into prefectures, municipalities, counties, towns, and villages, each with assemblies and chief magistrates, with supervision mainly of financial matters.

Hokkaido, Chosen, Taiwan, and Karafuto are administered under Governors, with special organizations.

Education. Elementary instruction is compulsory from six to fourteen years of age. Middle schools are provided for boys and girls. In addition to these schools, which constitute the regular plan of education, there are a large number of special, technical, and trade schools. There are five imperial universities, the Tokyo, Kyoto, Tohoku, Kyushu, and Hokkaido Universities.

Schools are supported by local taxation, with grants in aid from the Government. No religious teaching of any kind is permitted in the public schools. A special educational system has been established on the island of Taiwan.

Industries and Resources. *Agriculture:* The cultivated lands of Japan comprise about fourteen per cent of the total land area. The great crop of the country, to which the greatest acreage is devoted, is rice, the average annual crop amounting to about 500,000,000 bushels. Most of the product is consumed within the country, rice being the chief food crop of the natives, and it is falling considerably short of being sufficient to supply the demand. Large quantities are now being imported. Other cereals raised in Japan are barley, rye, and wheat. Tobacco is raised extensively. Japan is one of the world's great tea-growers, producing 78,934,000 pounds in 1923, chiefly in southern Honshu. Sugar has become a great crop. Vegetables, fruits, and nuts are raised in large quantities.

Raw silk is produced in large and increasing amounts, Japan leading the world in this product. The total output in 1923 was over 48,000,000 pounds. Raw silk is the greatest article of export from Japan.

Stock-raising is being encouraged, owing to the increased demand for beef as a food, and for draft horses. In 1923, there were about 1,590,000 horses and 1,450,000 cattle. Some goats are raised for milking, and a small number of swine for food. Only a very few sheep are kept. In 1923, the number of goats in the country was given as nearly 160,000; of swine, over 660,000. Sheep, 1921, numbered less than 10,000.

Forests. The forests of Japan cover over 20 million acres, nearly half of which are State-owned. The Government is turning its attention to forest conservation and reforestation. Fruit trees are numerous, especially the plum, the cherry, and the peach. Lacquer tree is largely cultivated in northern Honshu, and camphor trees produce about 5,300,000 pounds of camphor gum annually.

Fisheries. The waters surrounding Japan are exceptionally richly stocked with fish. Enormous quantities are consumed annually in Japan for food, as well as exported to other countries, principally to China. Fish are used extensively as fertilizers in Japan.

Much dried fish is sent abroad, the principal species being bonita, sardines, cuttle fish, and herring. Fish oil and whale oil are also produced for export trade.

Mineral Resources. Of the metals found, copper is the most valuable. Japan has become an important source of coal supply, and over 70 million gallons of petroleum are produced annually. Other important minerals, in the order of their value, are: gold, silver, iron, iron pyrites, sulphur, and lead. Kaolin, used in Japan's celebrated porcelain, is also found. Large deposits of both anthracite and bituminous coal are found, and extensive mines were acquired in Manchuria after the Russo-Japanese War.

Manufactures. The manufacturing industries of Japan have developed with remarkable rapidity in recent years. European methods are being followed.

The establishments turning out products to the greatest value are the textile mills. In 1921, the cotton mills of Japan turned out woven goods to the value of about $330,100,000; silk goods, about $250,000,000; and woolen goods, $80,000,000. Large quantities of hemp weaves are also turned out. Other important manufactures are paper, matches, earthenware, lacquered ware, matting, leather, and oils.

Enormous quantities of pig, bar, plate, and pipe iron are imported; and steel rails, plates, and other products are turned out in large quantities.

Shipbuilding is extensively carried on, with the newest machinery and under the supervision of skilled European workmen.

Drugs, cigarettes, the liquor called saké, and other minor products are manufactured for export trade.

Abundance of coal and water-power insure steady progress for the manufacturing industries of Japan.

Defense. Military service is universal and compulsory from the age of 17 to 40. Actual service begins at the twentieth year. Active service in the ranks is for three years in all branches, then four years and four months in the reserves. One-year volunteers are admitted.

Following active service, the soldier enters the second line reserves, and the home defense army, successively, with periodical terms of training amounting in all to six weeks.

Youths from 17 to 20 years of age are not called for service except in case of national emergency.

The total strength of the field army is about 700,000. Separate garrisons are maintained in Taiwan, Chosen, and Manchuria. The total peace strength was 251,925 in 1924, and the total war establishment 1,650,000.

In the navy are 29 battleships, 8 cruisers, 88 destroyers and torpedo boats, 84 submarines.

In the general European war, Japan fought on the side of the Allies, capturing Kiao-Chau, and rendering great assistance in keeping open the lanes of commerce between Western Europe and the Far East. She was given mandate by the League of Nations over all former German islands north of the equator. For details as to the island groups thus placed under Japanese administration, see "Recent Changes in World Maps," at front of volume.

AFRICA

Area. Africa is the second largest continent. Its area (about 12,442,647 square miles) is not much less than the combined area of North America and Europe.

Coast-Line. The coast-line (about 16,200 miles) is very regular, with few indentations or pronounced peninsulas—resembling, in this respect, the coast-line of South America.

Climate. About four-fifths of Africa lies within the torrid zone; and, except in the extreme south and at the highest altitudes, the climate is everywhere tropical. The equator crosses the continent at about half-way north and south.

Rainfall is abundant in equatorial belt, on northern slopes of Atlas Mountains, and on southeastern coast, but is elsewhere generally scanty. The Sahara Desert is the largest arid region in the world. Here prevailing winds are from northeast, and have been deprived of all moisture. Other regions of exceptional drought are Somaliland in the northeast, and the Kalahari Desert in the southwest.

Though equatorial Africa has an exceedingly hot and humid climate, and conditions there are regarded as more unhealthful for Europeans than in any other part of the world, the plateaus and elevations (as in Ethiopia, and even immediately on the equator, as in Kenya Colony) are cool and moderately healthful. In these regions, permanent occupation by Europeans is possible.

Population. The people of Africa north of the southern Sahara belong to the white race. Scattered elsewhere on the continent, small groups of Europeans are to be found. They are concentrated chiefly in South Africa. The great majority of the natives, however, are blacks, and are divided into many tribes and confused language groups. The total population of the continent—which can be estimated only roughly—is about 133,083,572.

The blacks in southern Africa, called Bantus, are light-colored, supposedly from the admixture of alien blood with negro. An interesting section of the negroid population of central Africa is the Pygmy tribe, the smallest people in the world. These people live in the densely forested regions along the equator, and support themselves by nomadic hunting. Most of the black tribes are agriculturists, and, in localities where conditions are favorable, cattle-breeding is carried on. Large numbers of the natives of Africa, especially in the north, are nomads, due largely to the arid character of the region in which they live.

Topography. Dividing the surface of Africa according to its most prominent features, we find in the north and south two regions of steppes and desert, the one in the south much smaller than the northern, but with characteristics very similar. Between them, except to the east, lies a vast region of densely forested land, extremely humid, traversed by great rivers. In the east is a grassy highland region, with great lakes occupying deep depressions.

In the extreme northwest, lie the Atlas Mountains between the great Sahara Desert and the sea. The general slope of the continent is from the east and south toward the west and north by a series of great plateaus. The highlands on the east, of which the most important is the Ethiopian Plateau, extend south with intervals of lowland into the Drakenberg Mountains of South Africa, which surround an interior arid plateau.

East of the great lakes in equatorial Africa, are the highest mountains of the continent, Kilimanjaro (19,320 feet elevation) and Kenya (17,040 feet), old volcanic peaks. A narrow strip of lowland borders the entire coast-line.

Partition among European Powers. The nations of Europe, by conquest, agreement, and treaty among themselves, have divided the entire continent and the islands of Africa into colonies and protectorates, with the exception of Egypt, Ethiopia, and Liberia, which are the only independent states. Egypt became independent, 1922.

The largest area is under French jurisdiction, and comprises Algeria and the Algerian Sahara, Tunisia, French Sudan, Senegal, Niger and French Guinea, Ivory Coast, Dahomey, Upper Volta, Mauritania, Réunion, French Equatorial Africa, French Somaliland, and Madagascar (with the Comoro Islands), a total of 3,944,637 square miles, not including Morocco, which is divided into French and Spanish protectorates, with Tangier as an International Zone. The total population of the French possessions in Africa is estimated at about 31,872,870.

England controls the Union of South Africa, Uganda, Bechuanaland, the Rhodesias, Swaziland, Southwest Africa (former German), Nigeria, Gold Coast, Gambia, Sierra Leone, Kenya Colony, and British Somaliland, Nyasaland, Basutoland, Kenya Protectorate Zanzibar, Tanganyika Territory (former German), Anglo-Egyptian Sudan, Ascension, and St. Helena; area about 3,853,489 square miles; population, about 52,929,222.

Italy's possessions are Eritrea, Tripolitania, and Cirenaica, and Italian Somaliland. Area, 800,386 square miles; population, about 1,728,228.

Spanish possessions are Rio de Oro and Adrar, Spanish Guinea, Fernando Po, Annabon, Corisco, Great Elobey, Little Elobey. A Spanish protectorate has been established in part of Morocco. The Canaries are considered an integral part of Spain. Area, not including Morocco, 120,031 square miles; population, 193,846.

Belgian Congo has a total area of about 920,656 square miles, and a population of about 8,512,795.

Resources. The resources of Africa have been comparatively little developed, due in part to the scanty productive activity of the natives, and partly to climatic conditions and difficulties of communication with the interior. The important output consists of products of the natural resources—those of the jungle, the animal products, and the mineral products. The principal wooded area, apart from the pine and fir, oak, cypress, and cork forests of the Atlas highlands in the north, stretches from the Congo to the great lakes, covering an area estimated by Stanley of over 321,000 square miles.

The most important tropical forest products are rubber, kola nuts, palm oil and kernels, gum, copal, bananas. The great timber resources are, of late, yielding greater returns. Ivory is the great animal product, mostly from the Belgian Congo. Ostrich feathers are an important export.

Mineral products are chiefly from the south, where gold and diamonds are found. Other regions produce minerals in large quantities, but the mining resources of Africa as a whole have been but little developed. Four-fifths of the world's diamonds and about one-half of its gold come from British South Africa.

Madagascar is a French possession; area about 228,707 square miles; population, 3,621,342. The island is mountainous and picturesque, with the most broken portion toward the east. On the highlands of the interior, the climate is moderately cool and tolerable for Europeans, but on the low coast-lands it is hot, humid, and unhealthful. Gold, wax, dyewoods, raffia, cattle, hides, beans, cacao, vanilla, cloves, etc., are exported.

Mauritius. The island of Mauritius is a British possession, with an area of about 720 square miles; population, 398,236. Instruction is largely controlled by Roman Catholics. The principal products and exports are sugar, aloe-fiber, cocoanut-oil, and molasses.

Reunion, a French possession, has an area of 970 square miles; population, 186,637, chiefly Europeans. The principal products are sugar, rum, coffee, tapioca, cacao, vanilla, and spices.

St. Helena, a possession of Great Britain, has an area of 47 square miles, and population of 3,747. The principal products are flax and fruits. Eucalyptus, cedar, and Norfolk pines flourish on the island. The leading industry is lace-making.

Ascension Island has an area of 34 square miles; population, about 250, comprising the British garrison. The island, a British possession, is strongly fortified. About ten acres are under cultivation. Turtles in great numbers frequent the coast.

Cape Verde Islands belong to Portugal; area, 1,516 square miles; population, 156,211. Products, coffee, cinchona, cacao, etc., and millet. Portugal also owns the **Madeira, St. Thomas,** and **Prince Islands,** and a strip on the Senegambia coast.

Belgian Congo (920,656 square miles; population 8,512,795) is governed by an appointed Colonial Council and a Governor-General. The chief exports are copper, palm nuts and oil, gold, ivory, copal, and rubber.

Liberia is an independent republic with an elected President, House of Representatives, and Senate. Its area is about 43,000 square miles and population between 1,500,000 and 2,000,000 Africans. Resources are largely undeveloped. Fibres, palm oil and kernels, beni seed, coffee, cocoa, cotton, anatto seed, and rice are produced.

Rio de Oro and Adrar (109,200 square miles; population 30,000) belongs to Spain, under the governship of the Canary Islands.

Spanish Guinea, with an area of 10,036 and population of 140,000, is under a Governor General.

Angola (484,729 square miles; population 4,119,000) has been a Portuguese colony almost continually since 1575. It is under a High Commissioner at Loanda. Coffee, rubber, wax, sugar, and vegetable oils are the chief products.

Portuguese Guinea (13,944 square miles; population 800,000) produces rubber, wax, oil seeds, ivory, and hides.

British possessions in West Africa comprise **Gambia** (4,134 square miles; population about 210,530), **Sierra Leone & Prot.** (31,000 square miles; population 1,541,311), the **Gold Coast** (78,650 square miles; population 2,112,002), and **Nigeria** (336,788 square miles; population 18,765,690). Each is governed by a Governor and Executive and Legislative Councils. Palm kernels and oil are exported from all. Nigeria also produces rubber, ground-nuts, ivory, hides, live stock, ostrich feathers, cocoa, and coffee; the Gold Coast exports cocoa, gold, manganese, kola nuts, mahogany, copra; Sierra Leone exports ginger and kola nuts.

French Equatorial Africa, or the **French Congo,** includes about 982,049 square miles, and 3,127,707 population. Lieutenant-Governors and Administrative Councils govern each colony, under a Governor-General for French Equatorial Africa and a Council of Government. Wild caoutchouc, palm oil, and coffee are the chief products. Forests are largely untouched.

French West Africa includes **Senegal, French Guinea, Ivory Coast, Dahomey, French Sudan, Upper Volta, Mauritania,** and the **Territory of the Niger,** a total of 1,443,332 square miles, and 13,541,611 population in 1927. A Governor-General is over all French West Africa, and under him a Lieutenant-Governor for each colony carries on the administration. Senegal has also an elected Colonial Council. Schools have enrolled about 55,000 students. Exports include ground-nuts, palm oil, rubber, cotton, mahogany, gold, cocoa, bananas, coffee, cattle, and castor beans.

Togo and the **Cameroons,** former German colonies, are now under French and British mandates. The former has an area of 33,700 square miles (22,000 square miles under French mandate) and a population estimated at 762,453. Palm oil and kernels, cocoa, rubber, and copra are exported. France has mandatory powers over 166,489 square miles of the 197,489 square miles of the Cameroons. The population of the French territory is estimated at 2,963,000. The chief products are almonds, coffee, tobacco, palm oil, cocoa, and ivory.

EGYPT

Area. The total area of Egypt, not including the Sudan, is about 383,000 square miles. This comprises the Libyan Desert, the region between the Nile and the Red Sea, the Nile Valley and Delta, and the Sinai Peninsula.

The cultivated and settled portion, which is confined to the Nile Delta and Valley, totals about 12,226 square miles.

Climate. The mean annual temperature immediately along the coast is about 69°, with a mean January temperature of 57°, and a mean July temperature of 81°. Toward the south the range between the mean summer and winter temperatures increases considerably, as at Assuan, where 42° is the mean in January, and 118° in July. The daily range is great because of the rapid radiation of heat at night. In the mountains, the temperature falls with the rise in altitude, falling as low as 18° in January at an altitude of 2,000 feet. As in Greece, the Etesian north wind is prevalent, and cools an otherwise trying climate.

Egypt is almost rainless, except in a narrow belt along the Mediterranean where eight inches fall annually. At Cairo the amount decreases to about an inch and a-half.

Population. According to the census of 1917, the total population of the settled surface was 12,750,918. Foreigners numbered 221,139. The population was estimated at 14,168,756 in 1927.

Cairo is the capital of Egypt, and the largest city in all Africa; population, 1,059,824 in 1927.

Religion. Islam is the State religion, though religious freedom is guaranteed. Almost 92 per cent of the inhabitants profess Mohammedanism, and about 8 per cent are Christians of various denominations. The Copts, whose creed is Orthodox (Jacobite), are the descendants of the ancient Egyptians, and are the most influential of the Christian denominations. Jews number about 59,600.

Government. By the terms of the draft constitution promulgated in 1923, Egypt is governed by a hereditary King, his Ministers, and a Parliament of two houses. Three-fifths of the members of the Senate are appointed by the King, and the remainder are elected by universal suffrage for ten years, one-half to be renewed every five years. The chamber of Deputies is elected for five years by Universal suffrage. The King appoints and dismisses ministers and may dissolve the Chamber of Deputies. The Ministers are jointly and individually responsible to the Chamber.

Laws are enacted by Parliament, either house of which or the King may initiate legislation, with the King's sanction. Only the King and the Chamber of Deputies, however, may deal with taxes.

England became dominant in Egypt on suppressing the Arabi rebellion, 1882, in which campaign France declined to join. Turkish suzerainty finally gave way to a British Protectorate, December, 1914; and on March 16, 1922, an independent Kingdom was proclaimed, the protectorate being relinquished under guarantees of safety to European interests in Egypt and against foreign aggression and interference with international rights in the Suez Canal. British troops are to be restricted to the imperial communications—the Canal and the Nile Valley.

Education. Though the percentage of illiterates is very great, progress is being made toward better conditions. A European system of primary and secondary schools, professional colleges, and special schools has been established. The native schools or maktabs are being brought under the supervision of the Department of Education, and much benefit has accrued from grants-in-aid from the Government. There are a number of purely religious schools, a school of Koranic learning at Cairo, established in 972, and large institutions at Tanta, Damietta, and Alexandria.

A number of trade, professional, and technical schools have been established by the Government.

Industries and Resources. *Agriculture:* About 62 per cent of the total population are engaged in agriculture. The fertile regions of Egypt are limited to the Nile Valley, where the soil is of extraordinary richness. Three crops are raised annually, in the winter, the summer, and the autumn seasons. The chief summer crops are rice, cotton, and sugar. The leading winter crops are cereals (wheat, barley, maize, etc.). Corn, millet, rice, and vegetables (onions, etc.), are the principal products of the autumn season. From the line of cliffs bounding the Nile Valley, stretch the vast deserts, devoid of vegetation except in widely scattered oases.

The products of the valley vary according to the locality. In the Delta region, the chief crops are cotton, onions, rice, Indian corn, wheat, barley, clover, and cucumbers. South of Darut, where irrigation is accomplished by periodic submersions at the time of the Nile flood, the crops are chiefly cereals and vegetables. Extensive irrigation works are converting large areas in Upper Egypt to the same conditions that exist in the Delta region. North of Darut in Upper Egypt, the same crops are grown as in the Delta, with the exception of rice.

The most important agricultural exports are cotton, cottonseed, cereals, onions and other vegetables, and hides and other animal products. Cotton is by far the most valuable export of the country.

The fruits commonly produced in Egypt are dates, oranges, lemons, figs, grapes, apricots, peaches, and olives.

Of the live stock, sheep are the most numerous. The other domestic animals are camels, horses, donkeys, mules, and oxen. Travel over the vast areas of waterless sands would be impossible without the camel.

Forests. Egypt is practically without forest area, though scattered clumps of date palms abound, and rubber and gum arabic are important forest products of the Sudan. Fruit trees grow in considerable numbers in the Delta and other irrigated regions.

Mineral Resources. Gold has been mined in the region along the Red Sea at intervals since ancient times, and precious stones are found in the Sinai Peninsula and in the Red Sea Hills. Large quantities of salt are obtained from Lake Mareotis, carbonate of soda from the Natron Lakes, and alum from the oases. Petroleum is produced near the Gulf of Suez.

The granite and porphyry quarries of Egypt are famous for their produce, and have been productive for ages. Large quantities of limestone and sandstone are also obtained from the cliffs that line the valley of the Nile. Other minerals are phosphate rock, manganese ore, gypsum, talc.

Manufactures. The manufacturing industries of Egypt are of considerable importance, and are based principally on the agricultural output of the country. The largest agricultural product, cotton, supports the most important manufacturing plants—the textile mills, cottonseed oil factories, and ginning establishments. In Upper Egypt a large number of sugar refineries are located, and in the Delta a number of rice mills. Flour mills in all parts of the country prepare the grains for home consumption.

Other important industries are breweries and distilleries, soap factories, and cigarette factories. The cigarette factories are located mostly in Alexandria and Cairo, and export large quantities of their product. The tanning of leather is also an industry of importance.

Home industries are considerable, the natives weaving silk, linen, woolen, and cotton goods by hand. There are extensive pottery works in Upper Egypt. Perfumes and much ornamental wood and metal work are produced by the natives to sell to the tourists who come in large numbers to the country. Considerable boat-building is also carried on along the Nile and the shores of the Mediterranean.

The principal exports of manufactured goods are textiles, sugar, cigarettes, provisions and drugs, skins, leather goods, metals and metal manufactures, and chemical products.

The Suez Canal. This international waterway connecting the Mediterranean and Red seas is a vital link in the trade route between Occident and Orient, obviating the necessity of the long voyage around the Cape of Good Hope. It is a neutral waterway, open on equal terms to all vessels of all nations at all times, and is exempt from blockade. It was built 1859–69, at a cost of about $127,000,000, by an Egyptian company financed chiefly in France by Count Ferdinand de Lesseps; but the British acquired control of stock by purchase in 1875. The Company's concession will expire in 1968. Length of canal, 103 miles, including 4 miles of approaches; depth, 35 feet; bottom width, 108 feet. Commercial vessels in transit, 1923, 4,540 (2,786 British, 111 American, 172 Japanese, 446 Dutch, 255 French), of 22,426,230 net tons.

ALGERIA

Area. Algeria has a total area of 1,069,000 square miles. Nearly half of this area (to the south) is desert, with a few scattered oases.

The total area of the Sahara Desert is estimated at 1,544,000 square miles, with a population (chiefly nomadic) of 800,000.

Climate. The climate is like that of Spain and Italy, with the temperature equable though generally high. There are considerable variations according to altitude. On the coast lands, the mean annual temperature is about 66° Fahr. On the plateaus and tablelands, however, the winters are often severe. Throughout, a great daily range of temperature is experienced.

Rainfall is light, except immediately on the coast, where rainy and dry seasons alternate. From June to October, the climate is hot and rainless.

Population. The total population, including European military forces, is 6,064,865. Over five million live in the northern part of the country, along the coast. There are about 800,000 Europeans.

Religion. The natives are all Mussulmans. Roman Catholics and Protestants are numerous, and there are many Jews.

Government. Algeria is a French dependency, under the authority of a Governor-General. There is a consultative Council of Government. Each department is represented by one senator and two deputies in the National Assembly in France, which possesses the legislative power over the dependency. Capital, Alger (Algiers, 226,218).

Education. Primary, secondary, and higher instruction is maintained by the State. There are numerous Mussulman schools of all grades; also five normal schools, and special schools of commerce, fine arts, hydrography, and agriculture.

Industries and Resources. *Agriculture:* A small area of land along the coast, capable of cultivation, is devoted to vineyards and cereals. Wheat, barley, oats, corn, potatoes, flax, and beans are cultivated. Cotton and tobacco are raised, and silk is cultivated. The principal fruits are oranges, dates, mandarins, citrons, bananas, pomegranates, almonds, olives, and figs. Vast quantities of wine are exported, principally to France. The production of olive oil is also important.

There is considerable grazing area, on which many sheep, goats, neat cattle, horses, camels, and swine are raised. There were over nine million sheep in 1920, and almost four million goats. Large numbers of asses and mules are also raised.

Forest products consist of cork and timber. Much bark is used for tanning. Forests covers over 10,000 square miles, chiefly in the mountainous country near the coast.

Fisheries are extensive, many varieties of food fish and shellfish abounding in the coast waters. Sardines, allaches, anchovies, sprats, and tunny are the most important species.

Minerals produced are iron, zinc, lead, mercury, copper, antimony, and petroleum. Phosphate rock is also produced in considerable quantities.

Manufactures are undeveloped. The few industries are principally engaged in the preparation of raw products for export. Imitation horsehair fiber is made from the leaves of the dwarf palm. Tobacco and cigars are manufactured for export.

TUNISIA

Area. The area is about 48,300 square miles, and includes a large portion occupied by the Sahara Desert.

Climate. Climatic conditions are similar to those in Algeria. Rainfall on the coast, and in the valleys between the Atlas ranges, is moderate, but sufficient for agriculture.

Population. Inhabitants numbered 2,159,708 by the census est. of 1926, with about 60,000 French, including the army of occupation. There were a great many Italians. The majority of the population consists of Bedouin Arabs and Kabyles.

Religion. The natives are Mohammedan. There are about 35,000 Roman Catholics, 50,000 Jews, and many Protestants.

Government. Tunisia is a French protectorate under the administration of a native Bey. The government is carried on under the direction of a French Resident-General. There is a ministry of 11 departments (8 ministers French, 3 Tunisian). Capital, Tunis, (1926, 185.996).

Education. There are many European and Mussulman schools, and a Mohammedan university. A large number of private schools and eight lycées and colleges have been established.

Industries and Resources. *Agriculture* is the chief industry. Wheat, barley, oats, and fruits are the principal products. Olive trees are numerous, and considerable olive oil is produced. The principal fruits grown are dates, almonds, grapes, oranges, and lemons. Stock-raising is an important industry, though the number of sheep and goats is insignificant when compared with that in Algeria. Large numbers of camels are raised.

Forest products are cork and timber. Total forest area, about 2,740,000 acres; cork forests, in northwest, cover 617,440 acres.

Fisheries employ many hands, chiefly Italians and Tunisians. Sardines, anchovies, allaches, and tunny are the important catches.

Mineral resources are being steadily developed. Lead, zinc, iron, manganese, phosphates, and fine marble are produced. The phosphate of lime output (2,338,000 tons in 1923) is increasing.

Manufactures. Native industries are the spinning and weaving of wool, carpet weaving, leather tanning and working, and pottery making. Other products are slippers, matting, and silks.

MOROCCO

Area. The total area is about 231,500 square miles, including the Spanish sphere of 8,415 square miles.

Climate. The climatic conditions are similar to those of Algeria. Along the Mediterranean coast, the influence of the sea makes the temperature equable, and the rainfall sufficient for production; but droughts are not uncommon in the southwest.

Population. Inhabitants number about 4,229,146. French 66,223, besides troops. The population consists chiefly of Berbers, Tuaregs, and Arabs, and a considerable number of Jews and Negroes.

Religion. The natives are Sunnî Mohammedans.

Government. Morocco, with the exception of the Spanish zone, is under the protection of France. The ruler is the Sultan, nominally an absolute despot, but administering the government with the advice of the French Resident-General in all matters. The Sultan is also the absolute head of the religion.

Morocco has four capitals, in each of which the Sultan has palaces: Fés (81,173), northern capital; Marrakech or Morocco (149,259), southern capital; Meknes (39,931); and Rabat (37,985).

The Spanish zone is under the control of a Spanish High Commissioner, and a Calipha who is chosen by the Sultan from two candidates named by the Spanish Government. Tangier and its district have been set apart as an international zone; the area is about 140 square miles.

Education. There are many native and European schools.

Industries and Resources. *Agriculture:* Though the soil is capable of agricultural production, cultivation is in a primitive state. Vineyards and fruit and olive trees are very productive. The cultivation of cotton has been introduced.

Vast areas in the interior are unexploited, and their resources practically unknown. Among the principal agricultural exports are wheat, barley, beans, gums, linseed, olive oil, cumin, canary seed, cinnamon, and almonds. Wool, live stock, and eggs are also important exports.

Fisheries. Fish abound in Moroccan waters as in Tunisian, more especially sardines and tunny.

Mineral resources have not been developed, because of the hostility of interior tribes. The country is said to be rich, however, in copper, iron, lead, antimony, sulphur, silver, gold, petroleum and phosphates. Iron and lead ores are exported from the Spanish zone.

Manufactures are few and unimportant. Natives produce carpets, slippers, and pottery, though the industries are declining.

Defense. There are 22,000 French and 47,000 Moroccan troops in Morocco, in addition to auxiliary Moroccan troops numbering nearly 24,000. The army is under the command of the Resident-General.

ETHIOPIA

Area. Ethiopia, or Abyssinia, has a total area of 350,000 square miles.

Climate. In the lowlands below 4,000 feet, conditions are tropical and unhealthful, the annual temperature ranging from 70° to 100°. It is considerably cooler on the uplands, the mean falling to 60° to 80°. Still higher, it falls as low as 45°. Rainfall, 30 to 40 inches, heaviest in midsummer, provides much of the water for the annual overflow of the Nile in Egypt.

Population. Inhabitants number about 10,000,000. The population is of a decidedly mixed character, consisting of Semitic Abyssinians, Somalis, Arabs, Negroes, Indians, etc.

Religion. Christianity was adopted in the fourth century A.D., and the Alexandrian Church has since prevailed.

Government. Ethiopia comprises the kingdoms of Tigré, Amhara, and Shoa, with territories and dependencies. It is a feudal monarchy, independent since 1896. Since 1919 the Empress has been assisted by a Cabinet. Capital, Addis Ababa (65,000).

Education. Instruction is practically restricted to teaching of the clergy with the result that the people are illiterate and ignorant. There is but one Ethiopian school, with Coptic teachers.

Industries and Resources. *Agriculture:* Stock-raising and agriculture are the principal pursuits. There are large herds of cattle, sheep, and goats. Horses, mules, and donkeys are also raised. But little land is cultivated, the idea of landed property being scarcely known, and all land belonging theoretically to the Negus. Coffee, the principal product, grows wild, and is also cultivated. The natives raise barley, millet, wheat, and tobacco. Cotton, sugar-cane, hops, dates, and the vine are minor products. Agriculture is most extensive in the north.

Forests yield rubber and valuable timber. Forest growth is heaviest in the tropical lowlands, in gorges and ravines.

Mineral resources consist of iron, gold, silver, copper, antimony, salt, sulphur, and coal. Iron and gold are most worked.

Manufactures are in a crude state, comprising lumber, flour, soap, and leather. The United States imports skins and coffee from, and exports cotton sheetings to, Ethiopia.

ERITREA

Eritrea, an Italian colony, has an area of 45,783 square miles. The climate is generally tropical, and the rainfall very light.

Inhabitants number 402,793, by the census of 1921. The natives are to a great extent nomadic Mohammedans. There are about 4,000 Italians. The colony is administered by a civil Governor, who is nominated by the King and is under the Italian Minister for the Colonies.

Products are largely pastoral. Camels, oxen, sheep, and goats are raised. Pearl fishing is carried on, from which the revenue is large. Large quantities of palm nuts are exported, and gold is mined. Massáua (20,480), a fortified seaport on the Red Sea coast, is an important trade center. Capital, Asmara (21,771).

FRENCH SOMALILAND

French Somaliland, on Gulf of Aden, south of Eritrea, is a French protectorate. Area, 5,790 square miles; population, 208,000. The chief products are coffee, hides, skins, ivory, and salt. Coast fisheries are very valuable, chiefly in pearl products. Much of Abyssinia's external trade goes by way of the port of Djibouti 8,366), the capital.

BRITISH SOMALILAND

British Somaliland has an area of about 68,000 square miles, and a population of 344,000 Mohammedans. The exports consist chiefly of skins and hides, cattle, sheep, ghee (clarified butter), gum and resins, and specie. The gold is brought from Ethiopia. The Ethiopian trade through British territory is chiefly by way of Berbera, on southern coast of Gulf of Aden.

ITALIAN SOMALILAND

This protectorate, the most easterly part of Africa, including Jubaland (relinquished by British), has an area of about 174,603 square miles; population, 525,000. It is administered by a civil Governor. Capital, Mogadíscio (20,700). Resources are principally live-stock products. Large numbers of camels and sheep are raised. Butter, timber, hides, cotton, gum, and dura are exported.

BRITISH EAST AFRICA

British East Africa is now only a descriptive name covering various possessions comprising the main portion of the highlands of eastern equatorial Africa.

Kenya Colony (formerly East Africa Protectorate) has an area of about 244,992 square miles; population, about 2,736,517, of whom 12,529 are Europeans and 30,503 Asiatics. Capital, Nairobi (32,864).

Agricultural products are extensive, consisting of rice, maize, cotton, grains and vegetables of temperate zones (grown in the highlands), cocoanuts, sisal, coffee, cassava, and rubber. Black wattle (a kind of acacia, for tanning) is one of the chief products. Stock-raising is also important, principally of sheep and ostriches. Forests cover 3,600 square miles, yielding valuable timber (ebony, cedar, camphor, cork, jarrah, ironwood, olive, etc.).

Minerals are not extensive. Natron, diatomite, graphite, marble, and limestone occur in considerable quantities. Gold, manganese, and opals have been found.

Kenya Protectorate (formerly Zanzibar Protectorate) is a small strip on mainland, nominally under Sultan of Zanzibar.

Zanzibar, largest coralline island of Africa (640 square miles; population 129,140), with **Pemba** (380 square miles; population 87,650), forms a protectorate administered by a High Commissioner, Resident, and Council. Is chief source of world's supply of cloves. Cocoanuts also produced. Capital, Zanzibar (35,262), a free port.

Tanganyika Territory (part of former German East Africa), between Kenya Colony and Mozambique, has an area of about 365,000 square miles; population, about 4,455,805, mostly Bantus. Capital, Dar es Salaam (25,000). Coast belt is low; interior mountainous. Forests very extensive—mangroves, cocoa palms, cinchona, etc., on coast; acacia, sycamore, cotton tree, banyan, etc., in uplands. Large areas cultivated. Chief products: millet, bananas, cocoanuts, cloves, sisal, cotton, sugar, cacao, vanilla, rubber, coffee, rice, hides, butter, wax, ivory, nuts. Goats, cattle, sheep, reared. Mica and gems (garnet, agate, etc.) abound; coal, iron, lead, copper, salt, exist.

Uganda Protectorate totals 110,300 square miles, including 16,166 square miles of the great lake headwaters of the Nile. The British representative is the Governor. Native chiefs and kings conduct the administration in the provinces with the advice of the Governor. Population, 1924, was estimated at 3,148,481, including 640,000 civilized Baganda and 1,289 Europeans. Capital, Entebbe.

The principal products are cotton, sugar, chilis, ghee, coffee, cacao, oil seeds, ivory, hides and skins, rubber, and groundnuts. Of the minerals, iron and copper are abundant. Alum, graphite, coal shale, mica, and gold occur. There are valuable forests.

ANGLO-EGYPTIAN SUDAN

Anglo-Egyptian Sudan is a dependency of Egypt and Great Britain. The chief administrator is a Governor-General, appointed by Egypt with the assent of Great Britain, and assisted by a Council. Administration is carried out under Governors of the 15 provinces, under whom are Inspectors in charge of districts. Capital, Khartoum (30,797).

The total area is about 1,014,400 square miles; and the population, estimated at 7,005,966. A good school system has been established.

The principal products are gum arabic and ivory (world's chief supply); others are ostrich feathers, vegetables, cotton, vegetable ivory, dates, sesamé, senna, groundnuts, hides, and gold. Rubber is also obtained. Dura (a kind of millet) is the principal grain raised. Large quantities of cotton are being grown and exported. Cattle trade is increasing rapidly. The forests are rich in timbers (ebony, gum acacia, bamboo, fruits, and rubber).

A KLOOF IN THE TRANSVAAL, SOUTH AFRICA

CRAG AND TORRENT

As is the rule with great mining countries, the physical features of the Transvaal, which forms part of the British territory in the extreme south of Africa, are various and interesting. Ranging from precipitous mountains to so-called flats, with great plateaus (*veld*), stony ridges (*rands*), and sharp elevations (*kopjes*), with many streams forcing their boisterous way to the ocean, the country is rich in romantic scenery.

A general characteristic of the Transvaal is the prevailing growth of grass instead of trees. Before the Anglo-Boer war, great herds of cattle and other stock roamed the veld. Some valley levels and slopes are well wooded, though rarely with timber trees. Forest patches, with hardwood trees of great size, are found in the deep kloofs of the mountains, in the larger river valleys, and on the mountain slopes exposed to the sea mists. Trees are being imported and considerable plantations have been made.

The great wealth of the country is in its mineral resources, the most important of which are gold, diamonds, and coal, and it is for these, and the historic Boer uprisings, that the region is best known. The growth of Johannesburg, the principal mining camp, was similar to that of our own San Francisco.

In Natal, to the south of the Transvaal, the country rises in terraces, like a giant stairway, from the sea to the mountains on the western border. The many rivers which flow seaward from the mountains fall 8,000 feet or more in but little over 200 miles, forming magnificent cascades which seem to endeavor to make up in beauty for their deficiencies in navigation. Within twelve miles of Pietermaritzburg the Umgeni makes two splendid falls, the one near the village of Howick being an unbroken descent over a precipice more than 350 feet in height, or more than twice the height of Niagara.

Like the Transvaal, Natal proper is but sparsely timbered. The heavy timber trees are found mainly in the upland zone, on the mountain sides. There are several useful varieties, some of them, when polished, being equal in appearance to maple, walnut, ebony, or other well-known woods. Many imported trees grow well when properly planted and guarded from fires. In the coast belt are woods of evergreens, bearing flowers of brilliant hues, and the palms and other tropical plants of that semi-tropical region.

HOWICK FALLS, UMGENI RIVER, NATAL, SOUTH AFRICA

UNION OF SOUTH AFRICA

Area. The Union (not including its dependency, the Southwest Africa Protectorate) has an area of 472,347 square miles. The Cape of Good Hope is the largest province, with 276,966 square miles; Transvaal, 110,450; Orange Free State, 49,647; and Natal, 35,284 square miles.

Climate. The climate is generally temperate—except toward the north, where it becomes hot and unhealthful at low altitudes. On the Transvaal plateau the mean annual temperature ranges from 73° in summer to 53° in winter. The climate is generally dry, except immediately along the coast.

Population. Estimated, 1921, at 6,928,580 (1,519,488 whites).

Religion. Nearly all denominations of the Christian religion are represented, with the Dutch Churches and Anglicans in the majority. The native blacks are largely without religious connection. There are some Mohammedans, Hindus, Buddhists, Confucians, and Jews.

Government. The Union of S. Africa is one of the self-governing Dominions of the British Empire. The government is administered by an Executive Council who advise the Governor-General. Legislative power is vested in a Parliament of two houses. Each province has an elected Provincial Council and an appointed Administrator.

The Union of South Africa was formed May 31, 1910, out of the four colonies, Cape of Good Hope, Transvaal, Orange Free State, and Natal. The Cape Province was originally founded by the Dutch, but was finally ceded to Great Britain in 1814.

Transvaal (former South African Republic) was founded by Dutch settlers from Cape Colony in 1836-37. Became independent, 1852. Was annexed to Great Britain, 1877. A revolt, 1880-81, was successful in partly restoring independence, but a second revolt, 1899-1900, ended in complete surrender, including the Orange Free State, which had taken part in the rebellion.

Education. Primary education is under the jurisdiction of the respective Provincial Councils. There are three universities—of Cape Town, of Stellenbosch, and the federal University of South Africa, with three constituent colleges, established 1918.

Industries and Resources. *Agriculture:* Recurrent seasons of drought make agricultural progress difficult, but much has been done by irrigation and dry farming. Stock-raising is one of the chief sources of wealth. In 1923 the Union had about 31,418,000 sheep, 8,324,000 goats, 9,607,000 cattle, 282,070 ostriches, and large numbers of pigs, horses, donkeys, and mules.

The leading crops are corn, wheat, oats, barley, rye, potatoes, and tobacco in Cape Province; sugar, tea, tobacco, maize, and fruits in Natal; maize, wheat, tobacco, potatoes, barley, and oats in Transvaal; and maize, Kaffir corn, oats, wheat, barley, and rye in Orange Free State. The acreage devoted to cotton and sugar is increasing.

Forests. Timber resources are not extensive. Reserves, 1923, covered 2,631,979 acres. Bark for tanning is the principal product.

Fisheries. The food fishes caught in South African waters are of considerable importance, and large quantities are exported.

Mineral Resources. Minerals lead in value among the products of the Union. Gold output, 1923, 9,149,073 ounces, $202,354,232; diamonds, 2,053,095 carats, about $29,339,686. Other products are coal, tin, silver, copper, salt, asbestos, lime, gypsum, graphite, magnesite, manganese, lead, flint. The great gold region is in the Transvaal. The Cape Province is the largest producer of diamonds, though the Transvaal is also important.

Manufactures. Steady progress is being made in the manufacture of articles for local use—dairy products, leather, soap, cement, dynamite, matches, pottery, tobacco, starch, rope, beer, wine, spirits, furniture, vehicles, brooms, brushes, etc.

Southwest Africa, Mandate (formerly German Southwest Africa) has an area of 322,393 square miles, and a population of about 258,905 (24,115 whites). Capital, Windhoek (4,910). Numerous government and mission schools have been established. The chief industry is pastoral. Sheep and goats are most numerous. Irrigation necessary for agriculture, except in northwest. Principal crop, corn. Wheat, cotton, and tobacco grown.

Copper, lead, tin, and diamonds are mined, and gold, asbestos, graphite, and valuable colored marble occur.

BASUTOLAND

A territory under British jurisdiction, with an area of 11,716 square miles; population, 498,781 including 1,603 Europeans.

A Resident Commissioner governs the territory under the direction of the High Commissioner for South Africa. Native chiefs preside over the districts. Good schools have been established. Capital, Maseru (2,319). European settlement prohibited. Rainfall is abundant and the climate pleasant.

Products are wool, wheat, mealies, and Kaffir corn. Very fertile tracts abound. Coal, iron, and copper occur. Large herds of cattle are raised on the extensive pasture lands.

NYASALAND

This British protectorate, formerly British Central Africa, is on south and west shores of Lake Nyasa. Area, 37,890 square miles; population, 1923, 1,212,475 (1,412 Europeans). Capital, Zomba. Climate unfavorable to Europeans. Sheep, goats, horses, cattle, pigs, reared. Products exported: tobacco, coffee, cotton, tea, ivory, beeswax, rubber.

SWAZILAND

Swaziland, annexed during the Boer War of 1899-1900, lies at southeast corner of Transvaal. It is under the control of the British Government, authority resting in the High Commissioner for South Africa, through a Resident Commissioner. Area, 6,678 square miles; population, 130,680, of whom about 2,500 are whites. Capital, Mbabane.

The products are maize, tobacco, millet, beans, pumpkins, groundnuts, and sweet potatoes, grown only for local food supply. There are considerable numbers of sheep, cattle, and pigs, and some horses. Minerals are abundant, but little developed. Gold and alluvial tin are exported.

BECHUANALAND

A British protectorate lying south of Rhodesia and west of Transvaal. Area, 275,000 square miles; population, 152,983 (1,743 Europeans). The country is occupied by tribes under native chiefs. A Resident Commissioner directs the government from Mafeking (in Cape Province), with the advice of the High Commissioner. Two Assistant Commissioners reside in the protectorate. Education is provided by the Government and by missions.

Products are maize, Kaffir corn, and cattle. Large numbers of cattle are exported, chiefly to the Transvaal. Gold and silver are mined in small quantities.

THE RHODESIAS

The Rhodesias lie south of Belgian Congo and Tanganyika Territory; divided into Northern and Southern by the Zambezi. Area of Southern, 149,000 square miles; population, 873,647 (39,174 Europeans); of Northern, 291,000 square miles; population, about 1,244,761 (7,275 whites). Each is administered by a Governor, an Executive Council, and a Legislature. Northern Capital, Livingstone; Southern, Salisbury.

The Rhodesias are rich in gold. Other minerals produced are silver, copper, chrome ore, asbestos, zinc, lead, wolframite and scheelite (tungsten ores), antimony, diamonds, and coal.

Both countries are well adapted for agriculture and grazing. Irrigation necessary in some parts. Maize is the chief cereal crop; wheat also grown; and rubber, cotton, fruits, and tobacco are produced, principally in N. Rhodesia. Live stock extensively reared in S. Rhodesia. Forest lands in N. Rhodesia are rich in timber.

MOZAMBIQUE (PORTUGUESE EAST AFRICA)

This region, including the Kionga Triangle (south of the Rovuma), is a Portuguese province with an area of about 426,492 square miles; population, about 3,482,914. It is controlled partly by Companies, partly by the State. Capital, Lourenço Marques (20,642). The chief products are sugar, cocoanuts, rubber, ivory, beeswax, gold and other ores, and coal.

OCEANIA

Omitting Japan and the Malay Archipelago, and omitting also those smaller groups which are mere appendages of the Asiatic and American coasts, the name **Oceania** covers all the remaining islands that thickly dot the wide expanse of the Pacific.

The most convenient natural basis for grouping these islands is found in the submarine mountain systems traversing the ocean bed, of which they are the emerging crests. There are accordingly two great divisions—(1) Australasia, comprising the Australian Commonwealth and New Zealand; and (2) Polynesia, including Melanesia and Micronesia, Fiji, and many scattered groups in the mid-Pacific. The islands, physically, are of two types—the low or coral, and the high or mountain type. The high type rise usually to 4,000 feet or over, richly clothed with vegetation. The coral islands barely emerge, many barren, others with a few palm trees; some are merely atolls or coral rings; in other cases a central island is surrounded by a barrier or fringing reef and an intervening lagoon. The total area of Oceania is about 3,320,000 square miles, over three-fourths in Australia; population, about 8,000,000.

Polynesia proper comprises Marquesas, Phoenix, Hawaii, Samoa, Society, Tuamotu, and many other scattered groups. The Polynesians are probably an ancient branch of the Caucasian race, much modified by climate and isolation since their migration. They are considered the finest primitive race in existence, but have declined greatly since contact with European races.

The *Gilbert and Ellice Island Colony*, annexed to British Empire by request of natives, 1915, includes Gilbert, Ellice, Union (Tokelau), Fanning, Washington, Ocean, and Christmas (annexed 1919) Islands. Combined area, 166 square miles; population, 23,318 (264 foreigners). Copra, phosphates, and guano are the chief exports.

The *Phoenix Islands* comprise eight small, unattached British islands north of Samoa, near equator. Area, 16 sq. m.; pop., 59.

The *Samoan Islands* lie in mid-Pacific, about 400 miles northeast of Fiji, and 4,160 miles from San Francisco. Group was divided, 1899, between United States and Germany. The German Islands (west of the dividing meridian, 171° W. long.) were allotted, 1920, to New Zealand as mandatory of League of Nations, and are now (1927) named *Territory of Western Samoa*. Area, about 1,133 sq. m., including Savaii and Upolu, largest of group; population 41,660.

American Samoa includes Tutuila, Manua, and four other islands. Area, 75 square miles; population, 1926, 8,763. Pago Pago, Tutuila, is a fine natural harbor and naval station.

The Polynesians are being educated by several missionary institutions. Copra is the chief product and only export. Taro, breadfruit, yams, pineapples, oranges, and bananas are also grown.

Besides American Samoa, the Oceanic possessions of the United States include *Hawaii* (treated elsewhere); *Wake Island*, a cable landing; and *Guam* (area 206 sq. m.; pop., 1925, 15,789, including 550 whites), a naval station 5,053 miles southwest of San Francisco, 1,506 miles east of Manila. Guam, ceded by Spain in 1898, is the most southerly of the Marianas, and produces abundant fruits and timber and some cattle.

The *Tonga* or *Friendly Islands*, lying south of Samoa, are a Protectorate of Great Britain, ruled by the native sovereign, with the assistance of a partly elective Legislative Assembly. The administration is carried on under the British High Commissioner for the Western Pacific. The islands have a combined area of about 385 square miles, and had a population, 1921, of 24,935 of whom 23,759 were native Tongans, mostly Christians, and 571 were Europeans.

The products of the islands are cocoanuts, plantains, bananas, coffee, arrowroot, tapa (a textile woven from bark fiber), native-woven fishing-nets and mats, and fungus. Copra, fungus and live stock are exported to the U. S., Australia, and United Kingdom. Tonga is at times a place of residence of the British High Commissioner for the Western Pacific.

The *Cook Islands* and other islands of the vicinity have belonged to the Dominion of New Zealand since 1901. Area, about 280 square miles; total population, about 13,879. The chief products of the islands are copra, coffee, pearl-shell, fruits, hats, and lime-juice.

The *French Establishments in Oceania* have an area of about 1,520 square miles, and a population of 45,000, of whom 80% are natives. They are administered by a Governor, with an Administrative Council. The main groups are the *Society* (Tahiti, Moorea, etc.), *Leeward*, *Tuamotu*, *Marquesas*, and *Gambier*, *Tubuai*, and *Rapa Islands*. The chief products are copra, phosphates, cocoanuts, sugar-cane, bananas, oranges, and vanilla. Pearls and mother-of-pearl are important fishing products. Tahiti is the most important island.

Melanesia ("Islands of the Blacks") is the name applied to the islands stretching from New Guinea through the Bismarck Archipelago, Solomon Islands, Santa Cruz Islands, New Hebrides, and Loyalty Islands, to New Caledonia. The name is derived from the inhabitants, who are of negro type, possessing curly hair. The Melanesians are most purely represented by the Papuans of New Guinea, who are thought to be of same stock as African negroes.

Dutch New Guinea, part of New Guinea (Molucca Islands) west of 141° E. long., has an area of 160,692 square miles, and a population estimated at 195,460. It was created a province 1920. Rich in tropical forests and plants; but little is known of the country.

Northeastern New Guinea (formerly Kaiser Wilhelm's Land) was allotted to Australia in 1920 under Mandate. Area is 91,000 square miles, population 400,000. Education is carried on by missionary societies. The cultivated area is chiefly under cocoanuts, rubber, cotton, and tobacco. Areca and sago palms, cedar, sandalwood, bamboo, ebony, and other woods abound. Mother-of-pearl and trepang are found in the sea, and gold in the Bismarck Mountains.

The *Bismarck Archipelago*, former German Protectorate, was allotted to Australia, 1920, under mandate. Area, 14,500 square miles; population, 135,600. Large trade in copra, cotton, rubber.

The *Solomon Islands* have a total area of about 14,400 square miles (population 199,983), of which 11,000 square miles are in a British Protectorate, and 3,400 square miles (population 49,400) are former German territory allotted 1920 to Australia as mandatory of the League of Nations. Cocoanuts and rubber are chief products. Copra, sandalwood, vegetable ivory, and tortoise shell are exported.

The *Santa Cruz Islands* are heavily wooded, administered by Resident Commissioner of Solomon Islands Protectorate (British). Area, 363 square miles; population, 7,000. Copra is produced.

The *New Hebrides Islands* are jointly administered by British and French Resident Commissioners. Area, 5,700 square miles; population, about 61,644. Coconuts, maize, coffee, cotton, cacao, bananas are grown. Kauri and sandalwood exported. Sulphur, copper, iron, and nickel found.

New Caledonia is a French colony administered by a Governor, Privy Council, and elective Council-General. Area, 8,458 square miles; population, 51,363. Crops chiefly coffee, copra, cotton, maize, tobacco, fruits. Cattle and sheep extensively reared. Ranks next to Ontario as source of world's nickel supply. Output, 1923, refined nickel, 3,816 tons, $1,540,000; ore export, 24,850 tons. Chrome, lead, and cobalt ores, and coal also produced. The dependencies of New Caledonia are the Isle of Pines, Wallis Archipelago, Uvea Islands, Loyalty and Huon Islands, Futuna, and Alofi.

Micronesia ("Little Islands") comprises many islands north and northeast of Melanesia, really crests of a submarine ridge which sweeps from the east cape of New Zealand northward through the Fiji and Tonga Islands and on through the Gilbert and Ellice, Marshall, Caroline, Marianas, and Ogasawara (Bonin) groups. The Micronesian natives are a branch of the Polynesian family, somewhat hybridized by Melanesian-Asiatic infusions. They are of darker complexion and smaller size than the pure-blooded Polynesians.

The *Marshall Islands*, annexed by Germany in 1885, were allotted under mandate to Japan, 1920. Area, 160 square miles; population, 9,800 (198 Japanese). Copra and phosphates largely exported. Nauru, just south of the equator, an islet rich in phosphates, was allotted to the British Empire.

The *Caroline* and *Pelew Islands* and the *Marianas* (*Ladrone*) *Islands* (except Guam, the largest of the Marianas) were bought by Germany from Spain, 1899, but were allotted under mandate to Japan, 1920. Combined area, about 800 square miles; population, 27,576. Copra is the principal export.

THE WHITE MAN'S BURDEN

A SHADY LAGOON, NEW SOUTH WALES

Since the comparatively recent entry of the United States into the field of colonization in the Far East, the acquisitions and achievements of other great powers have an increased interest for us. Our Philippine Islands, over 7,000 in number, and their great neighbor Australia, not much more than a thousand miles distant and the largest island in the world, present strikingly different conditions to the governments responsible for their civilization.

Though Great Britain has been in formal possession of Australia since late in the eighteenth century, even the exploration of the interior is not yet complete. Great areas are almost desert-like in character; in the western part of the southern coast no stream of any size enters the sea for nearly a thousand miles of shore. In marked contrast are the progressive states in the east. Three of their capitals—Melbourne, Sydney and Adelaide—are not unlike the great capitals of Europe. The enormous wealth of New South Wales consists of its flocks and herds, supported by the rich native grasses. The production of gold, formerly of enormous value, has fallen off steadily in the past decade.

When the United States acquired from Spain, for the sum of $20,000,000, the islands in whose famous bay Admiral Dewey staged the opening episode of the Spanish-American war, she shouldered a responsibility which is becoming but little less burdensome as the years go by. However, like the early hostilities of the natives, problems of sanitation, health, transportation, and education are coming under control.

Only eleven of the Philippine Islands are important in size or character; a great majority contain less than a square mile each. The one most familiar to residents of the United States probably is Luzon, whose capital is Manila, the principal port of entry, the seat of government, and consequently the home of large numbers of Americans stationed in the Islands. The buildings generally are low, as is usual in tropical countries liable to earthquake. The city proper, or "walled town," is dull and somber, but the residential suburbs are not without their attractions, and their social life is charming. The popular promenade of the city is the Luneta, where a military band plays after sunset and which perhaps most regretfully haunts those Americans who have returned to the dearer, though less fascinating, homeland.

SUBURBAN STREET OF MANILA, PHILIPPINE ISLANDS

AUSTRALIA

Area. Australia, smallest of the continents, comprises 2,974,581 square miles, including Tasmania, and 12,010 miles of coast line. It lies entirely in the southern hemisphere and stretches 2,400 miles east and west and 1,971 miles north and south. Tasmania, part of the Commonwealth of Australia, lies 150 miles south of the continent, and has an area of 26,215 square miles and 900 miles of coast.

Physical Features. Except for the Great Dividing Range along the entire east coast, 25 to 150 miles inland, and a few straggling ranges in the interior, Australia is generally flat. From Lakes Eyre, 36 feet below sea level, the land rises gently, forming a low plateau, 1,000 to 2,000 feet high in the western half of the continent, surrounded on three sides by a low coastal plain. The interior depression is broken by many uplifts of moderate height, but, especially in west, consists mainly of level or rolling sandy and stony desert covered with spinifex and containing many salt marshes, with occasional reaches of grassland. Australia has no volcanoes and is remarkably free from severe earthquakes, though traces of recent volcanic action are found. The Great Barrier Reef, 60 miles off shore, parallels the east coast for 1,250 miles south from Torres Strait, broken by deep-water channels affording entrance to the harbors of Queensland.

Nearly all round the mountainous coast, and in the east and southeast, stretching far inland from the coastal range, lie fertile, well-watered slopes forming the great pasture-land of Australia.

The only great river system (navigable 2,000 miles) is that of the Murray and its tributaries, the Darling, Murrumbidgee, and Lachlan, rising on the western slope of the Alps. On the eastern and southern seaboards, the rivers, though short, are usually navigable for some distance; but most of the other rivers of Australia, in summer, become a series of disconnected, shallow pools. The largest lakes are Eyre (3,000 square miles) and Gardner (2,400 square miles) in South Australia, both brackish and shallow. Fresh-water lakes are confined mainly to coast lagoons.

Climate. Since the northern third of Australia is within the tropics, the temperature is generally high, the annual mean ranging from 45° in the south to 80° in the north. On the whole, the climate is dry and healthful. In summer, the average temperature ranges from 60° to 95° and over, but, along the coast the extremes are greatly modified by the ocean, and the annual range is small. In the southeast, the most populous region, the range is between 85° and 40°, though extremes of 110° and 27° have been recorded. The northern and eastern coasts have heavy rainfall, which diminishes to 5 inches and less in parts of the interior plateau, and rises along south and west coasts to 10 to 20 inches.

Commonwealth of Australia. The Commonwealth was created in 1901. In 1927 Northern Territory was divided into North and Central Australia. The following figures do not include 62,000 aborigines.

States and Territories	Area (sq. mi.)	Population (est. 1926)	Capital	Population
New South Wales	309,432	2,422,283	Sydney	1,070,510
Victoria	87,884	1,748,610	Melbourne	944,400
Queensland	670,500	903,119	Brisbane	274,260
South Australia	380,070	576,576	Adelaide	316,865
Western Australia	975,920	395,851	Perth	184,223
Tasmania	26,215	212,043	Hobart	55,130
North Australia	286,900	3,827	Darwin	1,500
Central Australia	236,720	411	Alice Springs.	
Federal Capital	940	7,535		
Total	2,974,581	6,262,720		

The Federal District of Canberra was officially established and opened in 1926.

Australia's dependencies include Norfolk Island, Papua Territory (area 90,540 square miles; population 276,366), Territory of New Guinea, Territory of Western Samoa, and Nauru Island. The Territory of New Guinea is composed of North Eastern New Guinea, Bismarck Archipelago, and Solomon Islands. Area 91,000 square miles, population 400,000. Western Samoa has an area of 1,133 square miles and 41,660 inhabitants. The island of Nauru has an area of 9 square miles and a population of 2,174.

Government. Australia is a self-governing Dominion. Executive power is vested in the Governor-General who acts under the advice of an Executive Council. Legislation is in the hands of a Federal Parliament consisting of the King's Representative, a Senate, and a House of Representatives, the latter two elected by universal adult (male and female) suffrage.

Each State (except Queensland, which abolished its Upper House) has a separate Parliament of two Houses, retaining residuary power of government over its own territory somewhat after model of the United States. The chief State executive is the Governor, assisted by a Lieutenant-Governor and a responsible Cabinet.

Primary education is compulsory, and generally free or at nominal cost. High schools and technical and agricultural colleges are aided by the States. Illiteracy is low. There are universities at Sydney, Melbourne, Adelaide, and Hobart. Though religious instruction is provided at certain schools, sectarian institutions are not subsidized by State. A majority of the people are Protestant.

Defense. Military training is compulsory, but only sufficient permanent troops are maintained to administer and instruct citizen forces. The Royal Australian Navy, maintained partly by Commonwealth, comprises a battle cruiser, four light cruisers, with destroyers, submarines, etc.

Agriculture. Australia is a great wheat and live-stock country. Value of wheat crop (124,993,271 bu., 1924) is about two-fifths that of all other crops combined. Other cereals are oats, corn, barley, The yield per acre of grains, though comparatively low, is increasing. Hay, potatoes, sugar-cane, and grapes are important crops. Tobacco and large quantities of fruit are raised.

The most important branch of agriculture is stock-farming. Great areas in the south, west, and northeast are particularly well adapted for sheep raising, and Australia's production of wool (590,820,185 lbs., 1924) is of great importance in the world's markets. Sheep provide also other important export products, as tallow, skins, and frozen meat. The raising of cattle, horses, and pigs is of relatively minor importance, though the production of butter is some 200,000,000 lbs. a year.

Much of the interior is agriculturally irredeemable, but vast semi-arid areas are being brought under cultivation by irrigation. In many instances the natural deficiency of water-supply has been relieved by borings.

Forests cover about 153,000 square miles, and measures of conservation have been adopted. The important timbers are eucalyptus, pine, cedar, mahogany, rosewood, gum, sandalwood, etc.

Fishing. Food fishes are numerous. Pearl-shell fishing is most profitable on the west, north, and northeast coasts.

Minerals. Gold (first discovered near Bathurst, N. S. W., 1851) is found in all parts of Australia. The total production, to end of 1923, exceeded $3,050,000,000, the annual output to 1924 being almost one million ounces. Western Australia, until 1885 thought to be without gold, has become the chief gold-producing State. Here are the famous Coolgardie and Kalgoorlie fields, scene of a rush in 1892–93 like that to the Klondike in the Canadian Yukon in 1897. Large coal fields have been opened; silver, lead, copper, tin, and zinc are also produced and exported. Tasmania is the world's chief source of supply of the rare platinum metal osmiridium. Other minerals are iron, nickel, cobalt, tungsten, manganese, mercury, antimony, bismuth, alum, asbestos, marble, and various gems.

Manufactures. Manufactures, though relatively not extensive, are of increasing importance. Among manufactured exports are smeltings, frozen and preserved meats, butter, skins, leather, and metal goods. Flour mills and saw mills are thriving.

Commerce. Australia's foreign trade has about doubled since 1913. In 1924, exports totaled over $578,000,000 in actual value, of which 6 per cent went to the United States; imports over $680,000,000, of which United States supplied 24.5 per cent.

Historical. While the existence of Australia was known to Portuguese and Dutch in the 15th century, and the Dutch visited it in 1606, no settlement was attempted until after the British Captain Cook took possession of and named New South Wales in 1770. Penal colonies were established at Botany Bay, near Sydney, 1788; at Brisbane, 1825, and in Tasmania, 1804. Western Australia was occupied 1826; Portland, Victoria, settled 1834; Adelaide, South Australia, 1836. Discovery of gold, 1851, brought many people to the country.

NEW ZEALAND

Area. New Zealand proper consists of a number of islands lying about 1,200 miles east of Australia—North Island (area 44,130 square miles); Middle or South Island (58,120); and Stewart Island (662)—and a number of small outlying islands, bringing the total area of the Dominion to 103,862 square miles, excluding the Cook and other islands annexed in 1901 (280 square miles), and the Territory of Western Samoa (about 1,133 square miles), consisting of the former German islands of Samoa lying west of 171° W. long. and allotted 1920 to New Zealand as mandatory of the League of Nations.

Physical Features. The two largest islands are mountainous, the Southern Alps in South Island culminating in Mount Cook (12,349 feet). North Island has several active and dormant volcanoes, and is noted for hot springs and geysers. Rivers abound, but few are navigable. Lakes are numerous, many of great beauty.

Climate. The climate of New Zealand is distinctly warm, equable, and healthful. The mean annual temperature at Wellington is 55°, ranging from 47° in July to 62° in January; rainfall, 48 inches. Ocean winds from the west cause considerable humidity along the western coast. Relatively dry areas are formed on the east coast, though a deficiency of rainfall is rare.

Population.

Year	Population	Year	Population
1901	772,719	1921	1,218,913
1911	1,008,468	1926 (est.)	1,344,384

The figures for 1926 are exclusive of about 50,000 native Maoris, 13,879 Cook Islanders, and about 41,660 people in Western Samoa (2,000 whites). The whites are chiefly European, the Government having aided immigration in the past from England and Scotland. Auckland, largest city (202,400 in 1927).

Religion. No State aid is granted religion. Exclusive of the native Maoris, about 42 per cent of the population are Anglicans, 24 per cent Presbyterians, 13 per cent Roman Catholics, and 9.2 per cent Methodists.

Government. New Zealand is a self-governing Dominion of the British Empire. The King is represented by the Governor who exercises the executive duties under advice of a Cabinet. Legislative power is vested in the King and a General Assembly of two houses. The upper house, or Legislative Council, comprising 42 members in 1926, is now elected for seven years. One member was appointed for life prior to September, 1891. The lower house, or House of Representatives, is composed of 80 members also elected by universal suffrage for three years. There are four Maoris in the House.

In England, the Government of New Zealand is represented by a High Commissioner. Capital, Wellington (126,750).

Education. Elementary instruction is free and compulsory between the ages of seven and fourteen. All primary public schools are entirely secular. An excellent system of native village schools has been established for the Maoris. Secondary and technical instruction is provided, and there are a university and an agricultural college. With the University of New Zealand, which is solely an examining body, are four affiliated colleges—at Dunedin, Christchurch, Auckland, and Wellington, all endowed with lands.

Industries and Resources. *Agriculture:* Two-thirds of the area of New Zealand is suitable for agriculture and grazing, but only about 27 per cent of the total area is under crops. Wheat, oats, and barley are the chief products. Large crops of hay and flax are also raised. The olive, vine, and semi-tropical fruits are grown. Live-stock products, principally wool, butter and cheese, frozen and preserved meats, hides and tallow, are the principal merchandise exports.

The mild, moist climate and the abundant grasses favor the live-stock industry. Seven-eighths of the agricultural area is devoted to grazing. There are nearly 24,000,000 sheep and over 3,500,000 cattle. Wool clip, 1923, 224,015,724 pounds; export, 214,845,027 pounds.

Forests. There are about 12,592,811 acres of forest land. Kauri pine is most valuable tree for timber and gum. Pine, beech, palm, and great ferns are also found. The woods are devoid of carnivorous animals and deadly reptiles.

Minerals. Gold, discovered in 1857, is the chief mineral product, and has been mined most successfully in Auckland and Otago. The output, 1923, was 962,090 ounces including a proportion of silver. Excellent coal is found, and a small quantity exported. Kauri gum, a fossil resin, has long been dug with profit. Considerable tungsten ore is available. Other minerals produced are copper, iron, lead, zinc, antimony, and manganese. There are extensive deposits of iron ore, and petroleum has been found.

Manufactures. The leading industries are freezing and preserving meat, making butter and cheese, lumbering, tanning, and wool-scouring. The list is large, and the value of the products great.

Defense. *Army:* Military forces comprise the permanent force of 100 officers and 375 men, the Territorial Force of 609 officers and over 15,000 men, and senior cadets numbering over 25,000. Every male is subjected to a gradual military training between the ages of 12 and 30, with no exemptions except for the physically unfit. During the Great War, New Zealand raised 124,211 men, sending over 100,000 overseas. Casualties, 58,003 (16,688 killed). *Navy:* A volunteer naval force and Royal Naval Reserve are to be established. Fleet, 1926, consists of two cruisers, one training ship.

Islands. The Auckland, Chatham, Cook, and Kermadec Islands have an area of about 1,000 square miles, and are attached to New Zealand for administrative purposes. The Cook Islands are the most important, the others being largely uninhabited. Their chief products are copra, coffee, pearl shell, fruit, hats, and lime-juice. Copra is the only export of Western Samoa, but sugar, coffee, cotton, maize, and fruit are grown there.

FIJI ISLANDS

Area. Colony numbers about 250 volcanic islands (80 inhabited), well wooded, 1,100 miles north of New Zealand. Total area, 7,083 square miles (Viti Levu, 4,053; Vanua Levu, 2,130).

Climate. Temperatures in Fiji are moderated by the cool sea breezes, resulting in an equable though warm climate. The wet season, from October to May, is accompanied by severe hurricanes in February and March.

Population. The population, by 1921 census, was 157,266 (3,878 Europeans). Fijians and East Indians are most numerous.

Religion. Methodists are most numerous, comprising about half the population. Roman Catholics comprise about one-fifteenth of the total. Large numbers of missions have been established.

Government. The colony of Fiji, ceded by the native chiefs to Great Britain in 1874, is administered by a Governor (appointed by the Crown), an Executive Council, and a Legislative Council.

Education. The Wesleyan Mission and the Roman Catholic schools control instruction. The state supports four schools, and assists many others.

Industries and Resources. *Agriculture:* The cultivation of sugar-cane, cocoanuts, and bananas is the main agricultural industry. Maize, yams, tobacco, tea, rice, rubber, sisal, are also cultivated. Sugar, copra, green fruits, shell, and rubber are the principal exports. Cattle run wild in large numbers; sheep, horses, and Angora goats are also raised.

PAPUA

Area. The area of the British Territory of Papua, in southeastern New Guinea, is 90,540 square miles, including 2,754 square miles of dependent islands. There are 1,366 Europeans, and it is estimated that there are 275,000 Papuans in the Territory.

Climate. The climate as a whole is hot and rather unhealthful. In the southeast the rainfall is very great.

Government. The Territory of Papua was created in 1906. It is administered by Australia and governed by a Lieutenant-Governor, Executive Council, and Legislative Council. Schools conducted by missions.

Industries and Resources. *Agriculture:* The chief products are cocoanuts, rubber, sisal hemp, and sago. The *forests* contain valuable timber (ebony, rubber, sandalwood, etc.).

Minerals. Gold, copper, and osmiridium are exported.

PHILIPPINE ISLANDS

Area. The Philippine Archipelago, physically and racially a part of Malaysia, but politically an outlying possession of the United States, numbers about 7,083 islands. The total area, including the Sulu Islands, is estimated at 114,400 square miles. Luzon, the largest island, has, with adjacent islets, an area of about 41,000 square miles; Mindanao, 37,000; Samar, 5,124; Negros, 4,903; Palawan, 4,500; Panay, 4,448; Mindoro, 3,794; Leyte, 2,799; Cebu, 1,695; Bohol, 1,534; and Masbate, 1,255; but most of the islands are less than a square mile each in size.

Physical Features. As part of Malaysia, the Philippines share the general features of that archipelago. The islands are mountainous, with many volcanoes. Highest elevation, Mount Apo (9,450 feet), on Mindanao. Many fertile plains and valleys. The larger islands abound in rivers and lakes. Coasts afford many natural harbors, but are steep and rugged on the east.

Climate. The climate of the Philippines, generally speaking, is tropical, the mean temperature in Manila reaching 80°. Conditions differ considerably, however, in the different islands, the equability along the coast disappearing inland where the altitude is high. Rainfall is heavy, the mean annual at Manila amounting to 76 inches. As low as 15 inches falls in parts of Mindanao, and as high as 152 inches at Masinloc on the western coast of Luzon. On the west coast, most of the rain falls from mid-April to October; on the Pacific Coast, from November to early April.

Typhoons are periodical and sometimes exceedingly destructive. Their greatest frequency is in September. Storm warnings, sent from Manila Observatory, are instrumental in saving heavy loss to shipping and property.

Population. According to the census estimate of 1918, the islands had 10,350,640 inhabitants. About 887,000 are non-Christians. Foreign-born number about 73,366, two-thirds Chinese, one-sixth Japanese. Americans, about 6,700. Estimated population, 1925, 11,414,060.

Manila, on the west coast of Luzon, capital, largest city, and leading industrial and commercial center, has a population estimated at 285,306. Baguio, summer capital, is in the Mountain Province.

Religion. Introduced in 1571, the Catholic religion became firmly established among the natives. Independent Filipino Church organized 1901. About 5 per cent of natives are Mohammedans, chiefly Moros. There are also pagan tribes in the interior.

Government. The whole of the archipelago is under civil government. The chief executive is the Governor-General, under whom are Secretaries of 6 executive departments, all Filipinos except the Secretary of Public Instruction, who is also Vice-Governor, and who, like the Governor-General, is appointed by the President and confirmed by the Senate of the United States. The Departments are: Interior, Finance, Justice, Agriculture and National Resources, Commerce and Communications, and Public Instruction.

The Legislature comprises 2 houses—a Senate of 24 members, and House of Representatives of 93 members—representing the 48 Provinces. Both houses are elected, excepting 9 Representatives and 2 Senators appointed by the Governor-General to represent certain "special" Provinces. A Council of State, including presidents of both houses and the Secretaries of Departments, represents the peoples' counsel in the Administration.

Each Province has a Governor, elected in most cases, who, with two other members, forms the governing Board. Towns and municipalities are governed by elected municipal presidents and councils.

Education. The system of education is directed by the Secretary of Public Instruction. Instruction is free, secular, and coeducational. English is taught in all public schools. Public school enrollment, 1923, over 1,100,000. Normal, industrial, and trade schools have been established, and there is a free university. Annual public expenditure on education, about $10,000,000. At Manila is a Catholic university founded in 1611.

Industries and Resources. *Agriculture* is advancing, but native methods are still primitive. About two-thirds of the people live on the soil, and, though holdings are generally small, more than half of the 12 million acres of arable land is cultivated. Soil is very rich, and adapted to all tropical plants. Rice leads all crops in value, and, with the yam or sweet potato, is the staple food of the natives. Cocoanuts and oil, sugar, Manila hemp (abaca), corn, and tobacco are the other great crops. Hemp grows wild on hill slopes, but is cultivated extensively in Leyte and Luzon. Sugar-cane is grown everywhere, chiefly in Luzon and Negros. Cocoanuts are a constantly increasing source of wealth. Excellent tobacco is grown in northern Luzon and on east coast of Negros. Cacao flourishes in all hot, damp districts. Fruits grow wild, and are not largely cultivated. Pineapples are grown chiefly for the fiber they supply.

Large areas are devoted to pasturage, supporting mainly the water buffalo or carabao (chief beast of burden), other horned cattle, and ponies. Pigs and chickens are numerous, but sheep and goats do not thrive.

Forests. About half of the land is forest-covered. The products are of great value, chiefly rare hardwoods for cabinet work, shipbuilding, etc., fibers, gums, fruits, and dyes. The trees are chiefly cocoanut and other palms, banyans, bamboo, pines, rubber trees, and gum, fruit, and medicinal trees and plants. Among the many bananas is the *Musa textilis*, yielding Manila hemp.

Fisheries. The waters surrounding the islands abound in food fishes of many varieties. Fish caught in inland waters provide the natives with an abundant food supply. Molluscs are particularly numerous. Pearl fishing is an important industry in the Sulu Islands. Shrimps, crabs, and lobsters are notable for their size and numbers.

Mineral Resources. The Philippine Islands possess considerable mineral wealth, though little has been done to develop the resources. Gold is found in nearly all the large islands, the annual output being over $1,000,000. This mineral has long been worked by the natives, though crudely. Copper is also very widely distributed, and in Luzon has been worked by the natives. Large, high-grade deposits of iron occur in Luzon, Cebu, and Panay, but facilities are inadequate for the proper development of the ores.

Lignite coal of exceptionally good quality has been found in Cebu and Batan, and some important fields have been opened. Analyses show that the Batan coal is equal to the best Japanese coal. Petroleum is also found in Cebu.

Silver has been found alloyed with gold, and in argentiferous galena. Platinum occurs in small amounts in Luzon. There are large deposits of marble in several islands, and the stone, which is of fine quality, is extensively quarried.

Other mineral products are sulphur, manganese, rock salt, kaolin, borax, and gypsum.

Manufactures. Manufacturing industries are as yet only comparatively slightly developed, but are making rapid advances. Those established in recent years are mostly under the direction of Americans for the export trade. The most important of these is the cigar and cigarette manufacture. Cigars and cigarettes to the value of $5,616,019 were exported in 1924, and the export of leaf tobacco amounted to $4,472,789. Sugar and rice mills are numerous, and there are a few shipbuilding plants and lumber mills.

Important industries are the preparation of copra and cocoanut oil and Manila hemp for shipment. These products are being exported in increasing quantities, and find a ready sale. The native methods are crude, and more advanced methods have been introduced. Over $25,500,000 worth of Manila hemp, and nearly $15,000,000 worth of cocoanut oil, were exported in 1924.

The principal native industries are the weaving of cloth fabrics, and making straw hats, mats, and cordage. The Filipinos have much natural dexterity, and are able to produce large quantities of comparatively finely woven textures, working with the crudest instruments, and reducing the hard fibers of trees and plants to a surprising softness. The beautiful Pina muslin, for example, is woven from a fiber supplied by the pineapple plant, and Manila hemp is the fiber from the leaf-stalks of a plantain or species of banana tree. Fiber and textile plants grow in the Philippines in nearly 300 varieties.

Defense. Order is maintained by the municipal police and the Philippines Constabulary. The Constabulary, 1925, consisted of 6,721 officers and men distributed throughout the islands. United States Army troops numbering about 12,000 are maintained in the islands, including five regiments of Philippine Scouts.

HAWAII

Area. The Territory of Hawaii, consisting of nine inhabited islands (Hawaii, Maui, Oahu, Kauai, Molokai, Lanai, Niihau, Kahoolawe, and Midway), besides eleven small uninhabited islands, has a total land area of 6,406 square miles, or a little more than Connecticut and Rhode Island combined. The largest of the inhabited islands is Hawaii, comprising 4,002 square miles; and the smallest is Midway, with an area of about 2 square miles.

Physical Features. The islands are crests of a submarine mountain chain extending northwest to southeast, partly reef-surrounded. Surface much broken. Most prominent features are volcanoes on island of Hawaii—Mauna Kea (quiescent), 13,825 feet elevation; Mauna Loa (intermittently active), 13,675 feet; and Kilauea, 4,090 feet. Kilauea, in constant eruption, has a crater 9 miles in circumference, 1,000 feet deep, and is the world's largest active volcano.

Climate. Lying in mid-ocean just within the tropics, the climate is warm throughout the year, though high temperatures are prohibited by the northeast trade winds, which blow for about nine months of the year. The mean annual temperature is 71.5°. The extremes are 54° and 89°. Daily range at Honolulu averages 11°. Enervating heat and cases of sunstroke are unknown. In the higher altitudes in some portions of the islands, the air is bracing and very healthful. The summers are generally cooler than those of New England.

Rainfall is greatest on the windward (east) side of the islands, especially on the mountain slopes up to a certain elevation. At Olaa on the island of Hawaii (about 2,000 feet), the rainfall is about 175 inches; while at Kailua, on the sheltered side, it is only about 51 inches annually. Precipitation is heaviest during the winter season, but severe thunderstorms are rare, and there are no cyclones.

Population. In 1920, the population of the islands was 255,912. This showed an increase, in a decade, of 64,003, or over 33 per cent. Four islands (Oahu, Hawaii, Maui, and Kauai) contain over 90 per cent of all the inhabitants. Oahu island, on which is located the city of Honolulu, is the most densely populated, and Hawaii the most sparsely settled, of these four islands. Estimate for 1928, 348,767.

Japanese numbered 109,274, or nearly 43 per cent of the total population. There were 41,750 Hawaiians and part-Hawaiians, 27,002 Portuguese, 21,031 Filipinos, 5,602 Porto Ricans, 2,430 Spanish, 4,950 Koreans, and 23,507 Chinese. Native Hawaiians are rapidly decreasing in number. Further Chinese, Japanese, and Korean immigration is prohibited, but a considerable increase in Asiatic population is still brought about by the high birthrate among the Japanese. Most of the Asiatics are employed as plantation laborers. The United States Government has aided the immigration of Spanish, Portuguese, Porto Ricans, and Filipinos, in order to secure a greater supply of desirable labor.

Honolulu, capital, on Oahu, had 113,000 inhabitants in 1928, an increase of 59.7 per cent in ten years.

Religion. Nearly all the native Hawaiians are Christians. The Asiatics are principally Buddhists. Anglican and Roman Catholic bishops are established at Honolulu, as well as ministers of the various Protestant denominations.

Government. On August 12, 1898, the Hawaiian Islands were annexed to the United States, and on June 14, 1900, were constituted the Territory of Hawaii. The Territory is represented in the United States Congress by a delegate elected for two years by popular vote. Executive power is vested in a Governor and a Secretary, appointed for four-year terms by the President. There is a Legislature composed of a Senate, members of which are elected for four-year terms, and a House of Representatives, elected for two-year terms. The Senate consists of 15 members, and the House, of 30 members. Sessions are held biennially, limited to 60 days.

The Territory is divided into five counties. Kalawao County contains a leper settlement, on the island of Molokai; population 667.

A supreme court, circuit courts, district courts, and a land registration court have been established.

Education. Elementary instruction is free and compulsory; school age 6 to 14. Public school enrollment, 1924, 51,557 in 176 schools with 1,620 teachers. There are a large number of private schools, a normal school, two reform schools, and a College of Agriculture and Mechanic Arts. English is in general use in the schools. A University of Hawaii was established in 1919.

Industries and Resources. *Agriculture:* Large areas of highly fertile farm lands are found on the most important islands (Hawaii, Maui, and Oahu), and especially in the lowlands. The islands are mountainous and extremely volcanic, the soil being formed by the weathering of basaltic lavas, and by sedimentary deposits washed down from the mountains, of a considerable depth and exceedingly fertile. Climatic conditions also favor agriculture.

Sugar-cane is by far the most important product, the crop in 1924 being over 5,661,000 tons, or nearly 52 tons to the acre. The annual rice crop, chiefly from Kauai and Oahu, is about 1,000,000 bushels. Other important products are coffee, corn, peanuts, hay, tobacco, sisal, potatoes, sweet potatoes, and other vegetables, cassava, algaroba beans. Large quantities of pineapples are raised, of which 6,000,000 cases were packed in 1924, the best fruit coming from Oahu. Other fruit crops are bananas, oranges, figs, grapes, mangoes, berries, and taro (from root of which the staple native food "poi" is prepared). Fruit-canning is a growing industry, nearly $28,000,000 worth of canned fruit being exported in 1924. Some cotton and large rubber plantations have been established on Maui, Hawaii, and Oahu islands.

Except on Hawaii, irrigation is extensively employed on the sugar, taro, pineapple, banana, and other fruit plantations. Rice, of course, is irrigated everywhere.

Of the live stock, cattle, sheep, and swine are most numerous. The industry, ranking in importance next to sugar-growing, is carried on chiefly on the higher slopes, where crops cannot be so readily grown. The export of wool and hides is considerable. The cattle provide meat for the local markets, but considerable meat and dairy products are imported.

Commerce. Export trade is chiefly with the United States, raw sugar comprising over three-fourths of the total exports. Fruits (mostly canned), refined sugar, coffee, hides, honey, leaf tobacco, and rice make up most of the remainder. The total value of exports, 1925, was $105,504,292; imports, $81,802,547 ($72,145,418 from the United States). Leading imports are iron, steel, timber, and their manufactures, cotton goods, mineral oils, fertilizers, motor vehicles, electrical equipment, meat and dairy products, breadstuffs, rubber goods, paper, etc.

Forests. There were 840,984 acres in forest reserves in 1925. The upper mountain slopes, especially the eastern, are densely forested, the trees yielding valuable ship timbers and ornamental woods. Large areas are being planted with trees, and practical forestry receives much attention.

Fisheries. Inland waters provide very little fish, the streams being small and rapid. Sea fish, however, are of great variety. Artificial ponds, formed on the beach, are stocked from the open sea, and provide free fishing grounds. Some are owned privately, others by the Government. Fishermen are mainly Japanese.

Minerals are unimportant in comparison with the agricultural resources. There are, however, unlimited quantities of building rock, and large supplies of pumice, sulphur, gypsum, and ochers. Salt, kaolin, and sal-ammoniac also occur.

Manufactures. Manufacturing is for the most part incidental to agricultural pursuits, as sugar-refining, rice cleaning and polishing, pineapple canning, meat-packing, etc. Other establishments are the coffee mills and sisal and manioc mills. Iron works in Honolulu manufacture machinery, and there are lumber mills, soap factories, etc.

Defense. The Hawaiian National Guard, 1925, comprised 1,325 men and 81 officers. There are extensive fortifications near Honolulu and elsewhere on Oahu. A dry-dock and naval station are located at Pearl Harbor.

Owing to their central position between Orient and Occident, the Hawaiian Islands are commercially and from a naval standpoint the great strategic base of the Pacific. They are 2,089 nautical miles southwest of San Francisco; 4,640 northwest of Panama; 3,800 northeast of Auckland, New Zealand; 4,950 east of Hongkong; 4,350 east of Manila; and 3,440 southeast of Yokohama, Japan.

MALAYSIA

Malaysia, the **Malay** or **Eastern Archipelago,** comprises the outlying islands of southeastern Asia which preserve a comparative continuity of physical formation and of racial, floral, and faunal characteristics with that continent. It includes six large islands—Borneo, Sumatra, Java, Celebes, Luzon, and Mindanao—and a host of minor islands. Excluding New Guinea (in Oceania), but including the Philippines, the total area is about 750,000 square miles; population, estimated at about 60,000,000, the majority Malays, a supposed mixture of Mongolian and Caucasian stock. Among the pure-blooded Malays are the Achinese, of northern Sumatra, who have waged guerrilla warfare against the Dutch about fifty years. Politically, with exception of the Philippines (U. S.), the islands of Penang, Singapore, Labuan, northern part of Borneo (British), and the eastern part of Timor (Portuguese), with neighboring isle of Pulo Cambing, the entire archipelago is a colonial dependency of the Netherlands.

The islands of Malaysia are mainly crests of partially submerged mountain ranges rising from the Asiatic shelf. They owe their present form largely to volcanic activity, and their proverbial fertility is due chiefly to the decomposition of volcanic rock into soil. The great zone of volcanic activity stretches in the form of a horseshoe from Sumatra through Java to Timor, then bending northward through the Moluccas and the eastern tip of Celebes, and extending throughout the Philippines. The highest peaks are Kinabalu in Borneo (13,680 ft.), Indrapura (Korintji) in Sumatra (12,030 ft.), and Semeru in Java (12,000 ft.). The interior of the larger islands is covered with dense forests abounding in hardwoods, (teak, ebony, etc.) of great commercial value, besides numerous aromatic plants and shrubs. Cocoanut and other palms, bamboo, and tropical fruits abound.

DUTCH EAST INDIES. The islands were visited by Marco Polo, Venetian traveler, 1292, and by the Portuguese about 1509. The Dutch East India Company, created 1602, established trading stations in Sumatra, 1616; at Batavia, Java, 1619; and at Makassar, Celebes, 1660. Its control was gradually extended so as to embrace all the most valuable islands except the Philippines; but the Company was dissolved in 1798, and its territories passed to the Crown.

The total area of the Dutch East Indies is about 733,642 square miles; population about 51,013,878, including in 1925, 209,934 Europeans and 955,283 Orientals (chiefly Chinese and Arabs). The figures for the principal islands are as follows:

	Area Sq. M.	Population 1925
Java and Madura	50,745	36,403,833
Sumatra	163,138	5,759,568
Banka	4,549	160,358
Billiton	1,873	62,979
Celebes Islands	72,679	3,314,344
Dutch Borneo (about 72 per cent of island)	206,810	1,757,963
Moluccas and Dutch New Guinea (west of 141° E. long.)	190,860	608,716
Timor Archipelago	26,410	1,164,367
Other Islands	16,578	1,781,750

Java is the most fertile and densely populated island. Most of the land is owned by the Government, and the bulk of the population are engaged in farming. Only about 1¼ million acres, or 4 per cent of the land in Java, is in the hands of Europeans, the private estates being chiefly in the western part of the island.

Rice, sago, Indian corn, and fruits are the staple food of the people, and coffee, sugar, tobacco, rubber, indigo, tea, cinchona, nutmegs, capsicum, cotton, and cocoanuts are also extensively cultivated. Java is one of the world's great coffee countries, contributing most of the 100 million pounds average annual output of the colony. It is also a large producer of sugar, cinchona, tea, tobacco, cacao, and rubber. Kapok is extensively grown in central and eastern Java. This fiber is obtained from the kapok tree. It absorbs very little moisture, and is so buoyant that it can carry 20 to 30 times its own weight in water, hence is much used for stuffing mattresses, life belts, bandages, etc. Sumatra also has large crops of coffee, tea, sugar, and rubber, and the high quality of its leaf tobacco, a favorite for cigar binders, is recognized the world over. Dutch Borneo produces considerable rubber. Fruits include bananas, melons, pomegranates, tamarinds, breadfruit, oranges, etc. Live stock consist of water buffaloes, cattle, horses, sheep, goats, and swine. Manufactures are chiefly domestic. Native women weave cotton, and make mats, baskets, and earthenware. The Javanese excel in metal work. Among minerals, tin is extensively mined in Banka, Billiton, and Riau; coal in Java, Sumatra, and Borneo; gold, copper, and iron in Borneo, Sumatra, and Celebes; petroleum in Sumatra, Borneo, Java, and Ceram; diamonds and antimony in Borneo; salt (a government monopoly) in Java.

The commerce of the Dutch East Indies in 1923, including trade in specie, comprised: imports $241,172,000; exports, $534,817,000. The leading imports were: soft textiles, rice and other foodstuffs, petroleum, metal ware, machinery, electrical equipment, automobiles; exports: sugar, coffee, tea, tobacco, rubber, copra, kapok, indigo, cinchona, spices, tin, diamonds.

Batavia, Java, built on a network of streams and canals, is the chief commercial center. Soerabaja, on northeast coast of Java, is a great shipping port, and Soerakarta is chief trade center of eastern Java.

Railway lines, 1924, covered 3,326 miles in Java, 980 in Sumatra; telegraph lines and cables, 14,474 miles. Public schools are abundantly provided for Europeans and natives, and there are many technical, commercial, and special schools. The great majority of the natives are Mohammedans, but all religions have complete liberty.

Administrative and executive authority of government, with certain legislative powers not conflicting with reservations of the home parliament, are vested in a Governor-General, assisted by a Council partly legislative and partly advisory. The Council has no executive authority.

BRITISH EAST INDIES. Under this broad name are sometimes included the British Indian Empire, Ceylon, the Straits Settlements, and the Federated and Non-Federated Malay States on the Malay Peninsula, as well as the British island colonies in Malaysia. These last-named are all on the island of Borneo.

British North Borneo occupies the extreme northeast of the island of Borneo. Held under grants from the Sultans of Brunei and Sulu, it became a British protectorate in 1888. Area, 31,106 sq. m.; coast-line, over 900 miles. Population, about 257,804, principally Mohammedan settlers on coast, aborigines in interior, with some Chinese traders and artisans and about 550 Europeans. Tobacco, coffee, cocoanut, rubber, and ramie plantations have been established. Sago, rice, Indian corn, sugar cane, cotton, tobacco, ground and betel nuts, tapioca, and sweet potatoes are grown by natives. Other exports are timber, rattan, gutta-percha, camphor, sago, spices, birds' nests, and pearls. Minerals found include gold and coal in paying quantities. Protestant and Roman Catholic missions are kept up. The region is under the jurisdiction of the British North Borneo Company, administered by a Governor in Borneo and a Court of Directors in London. Capital, Jesselton.

Brunei, a coastal strip southwest of and adjoining British North Borneo, was also placed under British protection in 1888. Area, about 2,500 square miles; population, 27,000. Its products are similar to those of North Borneo. Government nominally headed by a Sultan, but administered by a British Resident. Capital, Brunei, built on piles and hence sometimes called the "Venice of the East."

Sarawak, a coastal strip southwest of and adjoining Brunei. It comprises the territory obtained by Sir James Brooke from the Sultan of Brunei, 1842, with accessions made in 1861, 1885, and 1890. In 1888 it was recognized as an independent State under protection of Great Britain. Area, about 42,000 sq. m.; coast-line, 400 miles; population, about 600,000. Has extensive level tracts along the seaboard, traversed by many navigable streams. Sago is exported in large quantities; cocoanuts are also abundant. India rubber, jelutong, cutch, and other forest products, besides birds' nests, are largely exported. Sarawak is one of the world's chief sources of supply of gutta-percha. The southern section is rich in minerals, antimony and quicksilver being exported. Coal is abundant, also gold, silver, diamonds, and petroleum found. The government is administered by a Rajah. Capital, Kuching.

THE DECLARATION OF INDEPENDENCE[*]

In Congress, July 4, 1776.

The following declaration of principles was agreed to on July 4, 1776, and is thus recorded in the Journal of Congress for that day:

Agreeably to the order of the day, the Congress resolved itself into a committee of the whole to take into their further consideration the Declaration; and, after some time, the president resumed the chair, and Mr. Harrison reported that the committee have agreed to a Declaration, which they desired him to report. The Declaration being read, was agreed to as follows:

THE UNANIMOUS DECLARATION OF THE THIRTEEN UNITED STATES OF AMERICA

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these colonies; and such is now the necessity which constrains them to alter their former systems of government. The history of the present king of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these states. To prove this, let facts be submitted to a candid world.

1. He has refused his assent to laws, the most wholesome and necessary for the public good.

2. He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and, when so suspended, he has utterly neglected to attend to them.

3. He has refused to pass other laws for the accommodation of large districts of people unless those people would relinquish the right of representation in the legislature—a right inestimable to them, and formidable to tyrants only.

4. He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

5. He has dissolved representative houses repeatedly for opposing, with manly firmness, his invasions on the rights of the people.

6. He has refused for a long time, after such dissolutions, to cause others to be elected; whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise; the state remaining, in the meantime, exposed to all the dangers of invasions from without and convulsions within.

7. He has endeavored to prevent the population of these states; for that purpose obstructing the laws for naturalization of foreigners; refusing to pass others to encourage their migration hither, and raising the conditions of new appropriations of lands.

8. He has obstructed the administration of justice by refusing his assent to laws for establishing judiciary powers.

9. He has made judges dependent on his will alone for the tenure of their offices and the amount and payment of their salaries.

10. He has erected a multitude of new offices, and sent hither swarms of officers to harass our people and eat out their substance.

11. He has kept among us, in times of peace, standing armies, without the consent of our legislatures.

12. He has affected to render the military independent of, and superior to, the civil power.

13. He has combined with others to subject us to a jurisdiction foreign to our Constitution and unacknowledged by our laws, giving his assent to their acts of pretended legislation:

a. For quartering large bodies of armed troops among us.

b. For protecting them, by a mock trial, from punishment for any murders which they should commit on the inhabitants of these states.

c. For cutting off our trade with all parts of the world.

d. For imposing taxes on us without our consent.

e. For depriving us, in many cases, of the benefits of trial by jury.

f. For transporting us beyond seas to be tried for pretended offenses.

g. For abolishing the free system of English laws in a neighboring province, establishing therein an arbitrary government, and enlarging its boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these colonies.

h. For taking away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our governments.

i. For suspending our own legislature and declaring themselves invested with power to legislate for us in all cases whatsoever.

14. He has abdicated government here by declaring us out of his protection, and waging war against us.

15. He has plundered our seas, ravaged our coasts, burnt our towns, and destroyed the lives of our people.

16. He is at this time transporting large armies of foreign mercenaries to complete the works of death, desolation, and tyranny, already begun with circumstances of cruelty and perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the head of a civilized nation.

17. He has constrained our fellow-citizens, taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

18. He has excited domestic insurrections amongst us, and has endeavored to bring on the inhabitants of our frontiers the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes, and conditions.

In every stage of these oppressions we have petitioned for redress in the most humble terms; our repeated petitions have been answered only by repeated injury. A prince, whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people.

Nor have we been wanting in our attentions to our British brethren. We have warned them from time to time, of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They, too, have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity which denounces our separation, and hold them, as we hold the rest of mankind—enemies in war; in peace, friends.

We, therefore, the representatives of the United States of America, in general Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the name and by the authority of the good people of these colonies, solemnly publish and declare that these united colonies are, and of right ought to be, free and independent states; that they are absolved from all allegiance to the British crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved; and that as free and independent states, they have full power to levy war, conclude peace, contract alliances, establish commerce, and do all other acts and things which independent states may of right do. And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor.

The foregoing declaration was, by order of Congress, engrossed and signed by the following members:

THE CONSTITUTION
of the
UNITED STATES OF AMERICA

WE the People of the United States, in order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this CONSTITUTION for the United States of America.

ARTICLE I

SECTION 1. All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

SECTION 2. The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.

No Person shall be a Representative who shall not have attained to the Age of twenty five Years, and been seven Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen.

Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other Persons. The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in such a Manner as they shall by Law direct. The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative; and until such enumeration shall be made, the State of New Hampshire shall be entitled to chuse three, Massachusetts eight, Rhode-Island and Providence Plantations one, Connecticut five, New York six, New Jersey four, Pennsylvania eight, Delaware one, Maryland six, Virginia ten, North Carolina five, South Carolina five, and Georgia three.

When vacancies happen in the Representation from any State, the Executive Authority thereof shall issue Writs of Election to fill such Vacancies.

The House of Representatives shall chuse their Speaker and other Officers; and shall have the sole Power of Impeachment.

SECTION 3. The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six Years; and each Senator shall have one Vote.

Immediately after they shall be assembled in Consequence of the first Election, they shall be divided as equally as may be into three Classes. The Seats of the Senators of the first Class shall be vacated at the Expiration of the second Year, of the second Class at the Expiration of the fourth Year, and of the third Class at the Expiration of the sixth Year, so that one third may be chosen every second Year; and if Vacancies happen by Resignation, or otherwise, during the Recess of the Legislature of any State, the Executive thereof may make temporary Appointments until the next Meeting of the Legislature, which shall then fill such Vacancies.

No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.

The Vice President of the United States shall be President of the Senate, but shall have no Vote, unless they be equally divided.

The Senate shall chuse their other Officers, and also a President pro tempore, in the Absence of the Vice President, or when he shall exercise the Office of President of the United States.

The Senate shall have the sole Power to try all Impeachments. When sitting for that Purpose, they shall be on Oath or Affirmation. When the President of the United States is tried, the Chief Justice shall preside: And no Person shall be convicted without the Concurrence of two thirds of the Members present.

Judgment in Cases of Impeachment shall not extend further than to removal from Office, and Disqualification to hold and enjoy any Office of honor, Trust or Profit under the United States; but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment and Punishment, according to Law.

SECTION 4. The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, except as to the places of chusing Senators.

The Congress shall assemble at least once in every Year, and such Meeting shall be on the first Monday in December, unless they shall by Law appoint a different Day.

SECTION 5. Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller Number may adjourn from day to day, and may be authorized to compel the Attendance of absent Members, in such Manner, and under such Penalties as each House may provide.

Each House may determine the Rules of its Proceedings, punish its Members for disorderly Behavior, and, with the Concurrence of two thirds, expel a Member.

Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Yeas and Nays of the Members of either House on any question shall, at the Desire of one fifth of those Present, be entered on the Journal.

Neither House, during the Session of Congress, shall, without the Consent of the other, adjourn for more than three days, nor to any other Place than that in which the two Houses shall be sitting.

SECTION 6. The Senators and Representatives shall receive a Compensation for their Services, to be ascertained by Law, and paid out of the Treasury of the United States. They shall in all Cases, except Treason, Felony and Breach of the Peace, be privileged from Arrest during their Attendance at the Session of their respective Houses, and in going to and returning from the same; and for any Speech or Debate in either House, they shall not be questioned in any other Place.

No Senator or Representative shall, during the Time for which he was elected, be appointed to any civil Office under the Authority of the United States, which shall have been created, or the Emoluments whereof shall have been encreased during such time; and no Person holding any Office under the United States, shall be a Member of either House during his Continuance in Office.

SECTION 7. All Bills for raising Revenue shall originate in the House of Representatives; but the Senate may propose or concur with Amendments as on other Bills.

Every Bill which shall have passed the House of Representatives and the Senate, shall, before it become a Law, be presented to the President of the United States; If he approve he shall sign it, but if not he shall return it; with his Objections to that House in which it shall have originated, who shall enter the Objections at large on their Journal and proceed to reconsider it. If after such Reconsideration two thirds of that House shall agree to pass the Bill, it shall be sent, together with the Objections, to the other House, by which it shall likewise be reconsidered, and if approved by two thirds of that House, it shall become a Law. But in all such Cases the Votes of both Houses shall be determined by yeas and Nays, and the Names of the Persons voting for and against the Bill shall be entered on the Journal of each House respectively. If any Bill shall not be returned by the President within ten Days (Sundays excepted) after it shall have been presented to him, the Same shall be a law, in like Manner as if he had signed it, unless the Congress by their Adjournment prevent its Return, in which Case it shall not be a Law.

Every Order, Resolution, or Vote to which the Concurrence of the Senate and House of Representatives may be necessary (except on a question of Adjournment) shall be presented to the President of the United States; and before the Same shall take Effect, shall be approved by him, or being disapproved by him, shall be repassed by two thirds of the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a Bill.

SECTION 8. The Congress shall have Power To lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imposts and Excises shall be uniform throughout the United States;

To borrow Money on the credit of the United States;

To regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes;

To establish an uniform Rule of Naturalization, and uniform Laws on the subject of Bankruptcies throughout the United States;

To coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weights and Measures;

To provide for the Punishment of counterfeiting the Securities and current Coin of the United States;

To establish Post Offices and post Roads;

To promote the progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries;

To constitute Tribunals inferior to the supreme Court;

To define and punish Piracies and Felonies committed on the high Seas, and Offences against the Law of Nations;

To declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water;

To provide and maintain a Navy.

To make Rules for the Government and Regulation of the land and naval Forces;

To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions.

To provide for organizing, arming, and disciplining, the Militia, and for governing such Part of them as may be employed in the Service of the United States, reserving to the States respectively, the Appointment of the Officers, and the Authority of training the Militia according to the Discipline prescribed by Congress;

To exercise exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square) as may, by Cession of particular States, and the Acceptance of Congress, become the Seat of the Government of the United States, and to exercise like Authority over all Places purchased by the Consent of the Legislature of the State in which the Same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings;—And

To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.

Section 9. The Migration or Importation of such Persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the Year one thousand eight hundred and eight, but a Tax or Duty may be imposed on such Importation, not exceeding ten dollars for each Person.

The Privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it.

No Bill of Attainder or ex post facto Law shall be passed.

No Capitation, or other direct, Tax shall be laid, unless in Proportion to the Census or Enumeration herein before directed to be taken.

No Tax or Duty shall be laid on Articles exported from any State.

No Preference shall be given by any Regulation of Commerce or Revenue to the Ports of one State over those of another: nor shall Vessels bound to, or from, one State, be obliged to enter, clear, or pay Duties in another.

No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public Money shall be published from time to time.

No Title of Nobility shall be granted by the United States: And no Person holding any Office of Profit or Trust under them, shall, without the Consent of the Congress, accept of any present, Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State.

Section 10. No State shall enter into any Treaty, Alliance, or Confederation; grant Letters of Marque and Reprisal; coin Money; emit Bills of Credit; make any Thing but gold and silver Coin a Tender in Payment of Debts; pass any Bill of Attainder, ex post facto Law, or Law impairing the Obligation of Contracts, or grant any Title of Nobility.

No State shall, without the consent of the Congress, lay any Imposts or Duties on Imports or Exports, except what may be absolutely necessary for executing it's inspection Laws: and the net Produce of all Duties and Imposts, laid by any State on Imports or Exports, shall be for the Use of the Treasury of the United States; and all such Laws shall be subject to the Revision and Controul of the Congress.

No State shall, without the Consent of Congress, lay any Duty of Tonnage, keep Troops, or Ships of War in time of Peace, enter into any Agreement or Compact with another State, or with a foreign Power, or engage in War, unless actually invaded, or in such imminent Danger as will not admit of Delay.

ARTICLE II

Section 1. The executive Power shall be vested in a President of the United States of America. He shall hold his Office during the Term of four Years, and, together with the Vice President, chosen for the same Term, be elected, as follows:

Each State shall appoint, in such Manner as the Legislature thereof may direct, a Number of Electors equal to the whole Number of Senators and Representatives to which the State may be entitled in the Congress: but no Senator or Representative, or Person holding an Office of Trust or Profit under the United States, shall be appointed an Elector.

The Electors shall meet in their respective States, and vote by Ballot for two Persons, of whom one at least shall not be an Inhabitant of the same State with themselves. And they shall make a List of all the Persons voted for, and of the Number of Votes for each; which List they shall sign and certify, and transmit sealed to the Seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall, in the Presence of the Senate and House of Representatives, open all the Certificates, and the Votes shall then be counted. The Person having the greatest Number of Votes shall be the President, if such Number be a Majority of the whole Number of Electors appointed; and if there be more than one who have such Majority, and have an equal Number of Votes, then the House of Representatives shall immediately chuse by Ballot one of them for President; and if no Person have a Majority, then from the five highest on the List the said House shall in like Manner chuse the President. But in chusing the President, the Votes shall be taken by States, the Representation from each State having one Vote; A Quorum for this Purpose shall consist of a Member or Members from two-thirds of the States, and a Majority of all the States shall be necessary to a Choice. In every Case, after the Choice of the President, the Person having the greatest Number of Votes of the Electors shall be the Vice President. But if there should remain two or more who have equal Votes, the Senate shall chuse from them by Ballot the Vice President.

The Congress may determine the Time of chusing the Electors, and the Day on which they shall give their Votes; which Day shall be the same throughout the United States.

No Person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty five Years, and been fourteen Years a Resident within the United States.

In Case of the Removal of the President from Office, or of his Death, Resignation, or Inability to discharge the Powers and Duties of the said Office, the same shall devolve on the Vice President, and the Congress may by Law provide for the Case of Removal, Death, Resignation, or Inability, both of the President and Vice President, declaring what Officer shall then act as President, and such Officer shall act accordingly, until the Disability be removed, or a President shall be elected.

The President shall, at stated Times, receive for his Services, a Compensation, which shall neither be encreased nor diminished during the Period for which he shall have been elected, and he shall not receive within that Period any other Emolument from the United States, or any of them.

Before he enter on the Execution of his Office, he shall take the following Oath or Affirmation:—

“I do solemnly swear (or affirm) that I will faithfully execute the Office of President of the United “States, and will to the best of my Ability, preserve, “protect and defend the Constitution of the United “States.”

Section 2. The President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the several States, when called into the actual Service of the United States; he may require the Opinion, in writing, of the principal Officers in each of the executive Departments, upon any Subject relating to the Duties of their respective Offices, and he shall have Power to grant Reprieves and Pardons for Offences against the United States, except in Cases of Impeachment.

He shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law: but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.

The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session.

Section 3. He shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient; he may, on extraordinary Occasions, convene both Houses, or either of them, and in Case of Disagreement between them, with Respect to the Time of Adjournment, he may adjourn them to such Time as he shall think proper; he shall receive Ambassadors and other public Ministers; he shall take Care that the Laws be faithfully executed, and shall Commission all the officers of the United States.

Section 4. The President, Vice President and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.

ARTICLE III

Section 1. The judicial Power of the United States, shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time ordain and establish. The Judges, both of the supreme and inferior Courts, shall hold their Offices during good Behavior, and shall, at stated Times, receive for their Services, a Compensation, which shall not be diminished during their Continuance in Office.

Section 2. The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority;—to all Cases affecting Ambassadors, other public Ministers, and Consuls;—to all Cases of admiralty and maritime Jurisdiction;—to Controversies to which the United States shall be a Party;—to Controversies between two or more States;—between a State and Citizens of another State;—between Citizens of different States,—between Citizens of the same State claiming Lands under Grants of different States, and between a State, or the Citizens thereof, and foreign States, Citizens, or Subjects.

In all Cases affecting Ambassadors, other public Ministers and Consuls, and those in which a State shall be Party, the supreme Court shall have original Jurisdiction. In all the other Cases before mentioned, the supreme Court shall have appellate Jurisdiction, both as to Law and Fact, with such Exceptions, and under such Regulations as the Congress shall make.

The Trial of all Crimes, except in Cases of Impeachment, shall be by Jury; and such Trial shall be held in the State where the said Crimes shall have been committed; but when not committed within any State, the Trial shall be at such Place or Places as the Congress may by Law have directed.

Section 3. Treason against the United States, shall consist only in levying War against them, or in adhering to their Enemies, giving them Aid and Comfort. No Person shall be convicted of Treason unless on the Testimony of two Witnesses to the same overt Act, or on Confession in open Court.

The Congress shall have Power to declare the Punishment of Treason, but no Attainder of Treason shall work Corruption of Blood, or Forfeiture except during the Life of the Person attainted.

ARTICLE IV

Section 1. Full Faith and Credit shall be given in each State to the public Acts, Records, and judicial Proceedings of every other State. And the Congress may by general Laws prescribe the Manner in which such Acts, Records and Proceedings shall be proved, and the Effect thereof.

Section 2. The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States.

A Person charged in any State with Treason, Felony, or other Crime, who shall flee from Justice, and be found in another State, shall on Demand of the executive Authority of the State from which he fled, be delivered up, to be removed to the State having Jurisdiction of the Crime.

No Person held to Service or Labour in one State, under the Laws thereof, escaping into another, shall, in Consequence of any Law or Regulation therein, be discharged from such Service or Labour, but shall be delivered up on Claim of the Party to whom such Service or Labour may be due.

Section 3. New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the Jurisdiction of any other State; nor any State be formed by the Junction of two or more States, or Parts of States, without the Consent of the Legislatures of the States concerned as well as of the Congress.

The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claims of the United States, or of any particular State.

Section 4. The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion, and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence.

ARTICLE V

The Congress, whenever two thirds of both Houses shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the Legislatures of two thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case, shall be valid to all Intents and Purposes, as Part of this Constitution, when ratified by the Legislatures of three fourths of the several States, or by Conventions in three fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress; Provided that no Amendment which may be made prior to the Year one thousand eight hundred and eight shall in any Manner affect the first and fourth Clauses in the Ninth Section of the first Article; and that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate.

ARTICLE VI

All Debts contracted and Engagements entered into, before the Adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.

This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding.

The Senators and Representatives before mentioned, and the Members of the several State Legislatures, and all executive and judicial Officers, both of the United States and of the several States, shall be bound by Oath or Affirmation, to support this Constitution; but no religious Test shall ever be required as a Qualification to any Office or public Trust under the United States.

ARTICLE VII

The Ratification of the Conventions of nine States, shall be sufficient for the Establishment of this Constitution between the States so ratifying the Same.

Done in Convention by the Unanimous Consent of the States present the Seventeenth Day of September in the Year of our Lord one thousand seven hundred and Eighty seven and of the Independence of the United States of America the Twelfth. In Witness whereof We have hereunto subscribed our Names.

The Constitution was adopted on the 17th September, 1787, by the Convention appointed in pursuance of the resolution of the Congress of the Confederation, of the 21st February, 1787, and was ratified by the Conventions of the several States, as follows, viz.:

By Convention of Delaware, on the 7th December, 1787.
By Convention of Pennsylvania, on the 12th December, 1787.
By Convention of New Jersey, on the 18th December, 1787.
By Convention of Georgia, on the 2d January, 1788.
By Convention of Connecticut, on the 9th January, 1788.
By Convention of Massachusetts, on the 6th February, 1788.
By Convention of Maryland, on the 28th April, 1788.
By Convention of South Carolina, on the 23d May, 1788.
By Convention of New Hampshire, on the 21st June, 1788.
(The ninth State to ratify the Constitution, thereby establishing it; see Article VII)
By Convention of Virginia, on the 26th June, 1788.
By Convention of New York, on the 26th July, 1788.
By Convention of North Carolina, on the 21st November, 1789.
By Convention of Rhode Island, on the 29th May, 1790.

(Rhode Island was not represented in the Constitutional Convention. Several of the delegates of other States had left the Convention before it concluded its labors, and some others did not sign. In all 65 delegates had been appointed, 55 attended, 39 signed.)

The first sentence, 3rd paragraph, Section 2, Article I, has been superseded by Section 2, Amendment XIV.

The 3rd paragraph, Section 1, Article II, has been superseded by Amendment XII.

AMENDMENTS TO The Constitution of the United States of America

---

Proposed by Congress, and ratified by the Legislatures of the several States, pursuant to the fifth article of the original Constitution

---

ARTICLE I

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

ARTICLE II

A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed.

ARTICLE III

No Soldier shall, in time of peace be quartered in any house, without the consent of the Owner, nor in time of war, but in a manner to be prescribed by law.

ARTICLE IV

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched and the persons or things to be seized.

ARTICLE V

No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any Criminal Case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

ARTICLE VI

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have Compulsory process for obtaining Witnesses in his favor, and to have the Assistance of Counsel for his defence.

ARTICLE VII

In Suits of common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise re-examined in any Court of the United States, than according to the rules of the common law.

ARTICLE VIII

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

ARTICLE IX

The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

ARTICLE X

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

ARTICLE XI

The Judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by Citizens of another State, or by Citizens or Subjects of any Foreign State.

ARTICLE XII

The Electors shall meet in their respective states, and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate;—The President of the Senate shall, in presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;—The person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of Electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President. The person having the greatest number of votes as Vice-President, shall be the Vice-President, if such number be a majority of the whole number of Electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

ARTICLE XIII

Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Section 2. Congress shall have power to enforce this article by appropriate legislation.

ARTICLE XIV

Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2. Representatives shall be apportioned among the several States according to their respective numbers counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

Section 3. No person shall be a Senator or Representative in Congress, or Elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may, by a vote of two-thirds of each House, remove such disability.

Section 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations, and claims shall be held illegal and void.

Section 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

ARTICLE XV

Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

ARTICLE XVI

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several states and without regard to any census or enumeration.

ARTICLE XVII

The Senate of the United States shall be composed of two senators from each state, elected by the people thereof for six years; and each senator shall have one vote. The electors in each state shall have the qualifications requisite for electors of the most numerous branch of the state legislature.

When vacancies happen in the representation of any state in the senate, the executive authority of each state shall issues writs of election to fill such vacancies; *Provided*, That the legislature of any state may empower the executive thereof to make temporary appointments until the people fill the vacancies by election as the legislature may direct.

This amendment shall not be so construed as to affect the election or term of any senator chosen before it becomes valid as part of the Constitution.

ARTICLE XVIII

Section 1. After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors with the importation thereof, or exportation thereof from the United States and all territory subject to the jurisdiction thereof, for beverage purposes is hereby prohibited.

Section 2. The Congress and the several states shall have concurrent power to enforce this article by appropriate legislation.

Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several states, as provided in the Constitution, within seven years from the date of the submission hereof to the states by the Congress.

ARTICLE XIX

The right of the citizens of the United States to vote shall not be denied by the United States or any state on account of sex.

ORDER OF PRESIDENTIAL SUCCESSION

Following is the act of congress, approved Jan. 19, 1886, providing for the performance of the duties of the office of president in case of the removal, death, resignation or inability both of the president and vice-president of the United States:

"Be it enacted, etc., That in case of the removal, death, resignation or inability of both the president and vice-president of the United States, the secretary of state, or if there be none, or in case of his removal, death, resignation or inability, then the secretary of the treasury, or if there be none, or in case of his removal, death, resignation or inability, then the secretary of war, or if there be none, or in case of his removal, death, resignation or inability, then the attorney-general, or if there be none, or in case of his removal, death, resignation or inability, then the postmaster-general, or if there be none, or in case of his removal, death, resignation or inability, then the secretary of the navy, or if there be none, or in case of his removal, death, resignation or inability, the secretary of the interior shall act as president until the disability of the president or vice-president is removed or a president shall be elected.

"Provided, That whenever the powers and duties of the office of president of the United States shall devolve upon any of the persons named herein, if congress be not then in session, or if it should not meet in accordance with law within twenty days thereafter, it shall be the duty of the person upon whom said powers and duties shall devolve to issue a proclamation convening congress in extraordinary session, giving twenty days notice of the time of meeting.

"Sec. 2. That the preceding section shall only be held to apply to such officers as shall have been appointed by the advice and consent of the senate to the offices therein named, and such as are eligible to the office of president under the constitution, and not under impeachment by the house of representatives of the United States at the time the powers and duties of the office shall devolve upon them respectively."

It is assumed that should the remote contingency arise that the foregoing cabinet officers are all ineligible or unavailable, then the other cabinet officers in the order in which their offices were created will fill the office of president temporarily. Thus the order of succession would be:

Secretary of State.
Secretary of the Treasury.
Secretary of War.
The Attorney-General.
The Postmaster-General.
Secretary of the Navy.
Secretary of the Interior.
Secretary of Commerce.
Secretary of Labor.

Should the man elected president die or in any way become ineligible between the time of the meeting of the electoral college and the following March 4th the vice-president would become president.

THE MONROE DOCTRINE

The Monroe Doctrine dates from a declaration of December 2, 1823, by James Monroe, President of the United States, in his seventh annual message to Congress. Brazil had declared its independence of Portugal the year before. Troubles in the latter country had caused a modification of the Constitution. In Spain a revolution had occurred and the dominion of Peru was lost. The Holy Alliance, formed in 1815 by Russia, Austria, and Prussia was threatening, so it was alleged, to help Spain recover its control in South America. Russia and the United States were in controversy over their Pacific Coast boundaries. Mr. Monroe in his message took up the Russian matter first, saying:

"In the discussions to which this interest has given rise, and in the arrangements by which they may terminate, the occasion has been judged proper for asserting, as a principle, in which the rights and interests of the United States are involved, that the American continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects for future colonization by any European power.

"Of events in that quarter of the globe with which we have so much intercourse and from which we derive our origin we have always been anxious and interested spectators. The citizens of the United States cherish sentiments the most friendly in favor of the liberty and happiness of their fellowmen on that side of the Atlantic. In the wars of the European powers, in matters relating to themselves, we have never taken any part, nor does it comport with our policy so to do. It is only when our rights are invaded or seriously menaced that we resent injuries or make preparation for our defense. With the movements in this hemisphere we are of necessity more immediately connected, and by causes which must be obvious to all enlightened and impartial observers. The political system of the allied powers is essentially different in this respect from that of America. This difference proceeds from that which exists in their respective Governments. And to the defence of our own, which has been achieved by the loss of so much blood and treasure and matured by the wisdom of their most enlightened citizens, and under which we have enjoyed unexampled felicity, this whole nation is devoted. We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety.

"With the existing colonies or dependencies of any European power we have not interfered and shall not interfere. But with the Governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling, in any other manner, their destiny, by any European power in any other light than as the manifestation of an unfriendly disposition towards the United States. In the war between these new Governments and Spain we declared our neutrality at the time of their recognition, and to this we have adhered, and shall continue to adhere, provided no change shall occur which, in the judgment of the competent authorities of this Government, shall make a corresponding change on the part of the United States indispensable to their security."

General Index of United States Cities

An index of 70,000 cities, towns and villages in the United States. (For index of cities in the U. S. Possessions, see page 349.)

The location of each place on the state maps is indicated by the letter and figure reference.

An asterisk (*) before a name indicates that the town is not shown on the map, in which case the index number refers to the county wherein it is located.

MAP INDEX AND ABBREVIATIONS

Page No.	State	Abbrev.
67	Alabama	Ala.
111	Arizona	Ariz.
102	Arkansas	Ark.
